PREFACE.

The fifth issue of the official Statistical Abstract of Palestine follows the same pattern as its predecessors.

The material in the tables has been brought up to date by the inclusion of statistics for the calendar year, 1940. In some instances, where the publication of later returns has been discontinued, notably in respect of Civil Aviation, Shipping, and certain trade commodities, the figures are given only up to the end of 1939.

Thanks are due to the business firms and other non-official bodies for collaboration in supplying the statistical returns from which many of the tables have been compiled and to officers of this office and of other Government Departments for the compilation of the tables.

Indebtedness to the Jewish Agency for permission to publish some interesting statistical tables compiled by the Statistical Department and the Economic Research Institute of the Agency is gratefully acknowledged.

Mr. Noah Slavny of this office has, in addition to other duties, been responsible for the editing of the abstract.

G. E. WOOD

I.

INTRODUCTION.

1. The comments contained in the following pages are designed to assist the reader in interpretation of the principal statistical tables published in this Abstract. A short descriptive statement is given under each heading together with, where appropriate, definitions of terms and other explanatory notes necessary towards a proper understanding of the import of the statistical material included in the body of the Abstract. Only brief comment on each subject is possible within the compass of these notes; and the statistical tables themselves are of necessity published in summary form only. For greater statistical detail in respect of any particular class of material the reader is referred to the more specialized publications of the Office of Statistics, to Departmental Reports, the Blue Book and other cognate sources. A list of publications of the Office of Statistics is given on the back cover.

2. Methods of compilation of statistics compiled in the Office of Statistics are given in certain of the stencilled statistical bulletins regularly issued by that Office. Since it has not yet been possible to publish under one cover an adequate description of methods and caveats necessary towards the proper interpretation of these statistics the following references are cited as implementing the necessarily brief notes on methodology contained in the following pages:—

Vital Statistics Bulletin Nos. 1/1936 (1931-1935), 1/1939.

Trade Bulletin Nos. 1/1937, 1/1939.

Banking Statistics Bulletin Nos. 1/1937, 2/1937, 6/1937, 8/1937, 3/1938, 14/1938, 1/1939.

Security Prices Bulletin, No. 1/1937.

Wholesale Prices Bulletin, No. 1/1936, 2/1936.

Retail Prices, Special Bulletin, September, 1940.

Employment and Pay-Rolls Bulletin, Nos. 1/1938 and 1938 Annual Bulletin.

Wage Rates Statistics Bulletin, Nos. 1, 4 and 7.

Labour Disputes Bulletin, Nos. 1 and 9.

Real Wages Bulletin, Nos. 1 and 2.

Industrial Accidents Bulletin, No. 1.

Judicial Statistics Bulletin, Nos. 1/1937 and 1/1939.

Bulletins on special subjects:—

Annual Bulletin: Reclassification of Palestinian Trade on the basis of the International Minimum List of Commodities.

Special Bulletin, No. 1. Trade between Palestine and Syria, 1927-1937.

Special Bulletin, No. 2. Seasonal fluctuations in the consumption of electric power.

Special Bulletin, No. 3. The fertility of marriage in Palestine.

AREA AND ADMINISTRATIVE DISTRICTS.

3. The total land area of Palestine is estimated at 26,305 square kilometres, or 10,157 square miles; in addition there is an inland water area of 704 square kilometres, or 272 square miles, comprising lake Hula, Lake Tiberias (the Sea of Galilee) and the Dead Sea (half of which is taken as belonging to Palestine); so that the total area of the country is 27,009 square kilometres or 10,429 square miles. There is a certain lack of precision about these figures, owing to the uncertainty of the Eastern frontier with Trans-Jordan. This boundary is defined as the centre of the Wadi Araba, from a point west of 'Aqqaba to the Dead Sea, and thence along the Jordan and the Yarmuk rivers until the Syrian frontier is reached. A trigonometric survey of the Wadi Araba has not yet been attempted, so that the exact centre line of the valley has yet to be determined, and moreover, the course of the Jordan is subject to frequent changes.

4. For administrative purposes Palestine is divided into six districts. From south to north these districts are (i) Gaza—Beersheba District, with Gaza as its centre; (ii) Lydda District, with Jaffa—Tel-Aviv as its centre; (iii) Jerusalem Dis-

trict; (iv) Samaria District, with Nablus as its centre; (v) Haifa District; and (vi) Galilee—Acre District, with Nazareth as its centre. There are eighteen Sub-districts each of which takes its name from its central town. The grouping of he Sub-districts into Districts has been changed from time to time but only very small changes have been made in the Sub-district boundaries.

5. The Sub-districts are purely administrative divisions, and for the most part do not correspond with any geographical or ethnographical sections, Geographically, Palestine can be divided into seven district regions as follows:—

(a) The Maritime Plain, extending north from the Egyptian frontier, varying in width but generally narrowing towards the north, and terminating at Mount Carmel, just south of Haifa. The northern section of this plain is often called the Plain of Sharon.

(b) The Coastal Plain of Acre, extending from Carmel north to the promontory of Ras en Naqura at the Syrian frontier.

(c) A broad valley runnnig south-east from Haifa to the Jordan Valley, and dividing the hills of Palestine into two distinct groups. The western portion of this valley is the triangular Plain of Esraelon (Marj Ibn 'Amir), which communicates with the Coastal Plain of Acre through the narrow gap of the River Qishon. East of 'Affula the valley again narrows and falls towards the Jordan Valley at Beisan, this section being known as the Valley of Jezreel.

(d) The central range, south of Esdraelon, comprising the hills of Judea and Samaria. This is the "backbone" of Palestine and extends from Hebron in the south past Jerusalem and Nablus and falls away to Esdraelon and Jezreel. Carmel ridge is a long spur of the Samaria hills, extending north-west to the sea at Haifa. The south-west flank of the central range, comprising the coastal slopes in the Hebron Sub-District, is known as the Shephelah. The south-east portion of the Judaean hills, falling away to the Dead Sea, is described as the Wilderness of Judaea.

(e) The hills of Galilee, which comprise the whole of the north of Palestine with the exception of the narrow Plain of Acre and the Jordan Valley.

(f) The Jordan Valley, extending from the Syrian frontier in the north to the Dead Sea. The valley north of lake Hula is wide, flat and marshy, and is often considered separately as the Hula Basin.

(g) The district of Beersheba, an immense triangle with is apex at the gulf of 'Aqqaba, which contains nearly half the land of Palstine. It is largely desert and is only sparsely populated.

6. The average density of population over the whole of Palestine at the end of 1940 was estimated to be 58.7 persons per square kilometre. If the sub-district of Beersheba is omitted, the remainder of the country has a population of 108.7 persons per square kilometre.

DEMOGRAPHY.

Population.

7. Prior to the Great War (1914-1918) the present territory of Palestine was administered as a part of the Turkish Empire. From time to time the Turkish authorities made attempts to enumerate the population, but there was no attempt to table the material and publish it in the manner of a modern census. Between the years 1917 and 1922, the British administration compiled figures of population based on estimates of all villages and towns. The first census of Palestine was undertaken in 1922, and the published results give a complete picture of the territorial and religious groupings of the people. A second census was taken in November, 1931, in which more detailed information was sought. The report of this census contains a wealth of descriptive material in addition to the very extensive tables. The population is classified by religions into the four main groups; Moslems, Jews, Christians and 'Others'. The religious division is traditionally the most important one in Palestine. The religious communities have preserved their identity and have exercised a continuous jurisdiction over their members, even though the political institutions of the country have undergone great changes.

Side by side with the religious division of the population is a second broad division into the three groups; Arabs, Jews, and 'Others'. This division is a political

one, and one which the course of events since the Great War has tended to emphasize. In this political division, the Jews are practically synonymous with the members of the Jewish religious community. The Arabs constitute the great bulk, though by no means all, of the Arabic-speaking inhabitants of Palestine.

8. Estimates of population in the years since the census of 1931 have been prepared by adding the recorded natural increase and the recorded excess of arrivals over departures to the census figures. Since members of His Majesty's Forces are not recorded on arrival or on departure, and since statistics of births and deaths among the nomadic Beduin are only fragmentary, these two groups are excluded from the 'settled' population on which birth and death rates are based. In order to arrive at a figure of 'total' population the number of Beduin enumerated in 1931 is added to the settled population; changes in the Beduin population being of unknown magnitude, no changes in this figure, 66,553, are made. His Majesty's Forces are excluded from all estimates, both 'settled' and 'total'. For the years since 1931 a 'mean' population has been introduced, a weighted average of the five populations spaced at quarterly intervals from the end of the preceding year to the end of the year in question. The effect of temporary seasonal migrations is thus minimized.

9. Including the Beduin tribes as enumarated at the 1931 census, but not including members of His Majesty's Forces, the population of Palestine at the end of the year 1940 is estimated to have numbered 1,544,530. The relative proportions in the estimated population at the end of 1940 were: Moslems 61.4 per cent., Jews 30.0 per cent., and Christians 7.8 per cent. 'Others' numbered 12,562 the great majority of whom are members of the Druze community and live in the hills of Carmel and Galilee.

Births and Deaths.

10. Registration of births and deaths was made compulsory in Palestine by the Public Health Ordinance of 1920. The Registers are kept at the District Offices of the Department of Health. Registration is effected on the receipt of a completed form of notification, supplies of these forms being distributed to all doctors and midwives and in rural areas to the mukhtars (heads) of the villages. In towns the notification of births is effected almost entirely by doctors and licensed midwives (dayas), and the notification of deaths by doctors. In villages information of the occurrence of births is given by the parent or registered daya (midwife) to the mukhtar who completes the form for transmission to the Health Office of the District. Similarly, on the occurence of a death the mukhtar is informed by the relatives or person present at the time of death, and the particulars are recorded by him for notification to the Health Office. In order to secure accuracy of records in village areas mukhtars receive payment for each notification of a birth or death made by them. In rural areas it is not possible as yet to obtain certification by medical practitioners of the cause of death. As the records of births and deaths among Beduin tribes are only fragmentary, they have been excluded from all statistics.

11. There has been a general decline in the birthrate since it attained a peak value of 50.24 per 1,000 in 1926. The decline has been noted in each of the three principal communities, but essential differences between the community rates have persisted. The Moslem rate is consistently the highest, having varied between 46.42 (in 1939) and 55.48 (in 1926). The Jewish rate is consistently the lowest, varying from 23.02 (in 1939) to 38.16 (in 1924). The Christian rate is intermediate between the Moslem and Jewish rates and has varied from 31.11 (in 1940) to 40.12 (in 1924). It has held an intermediate position between the Moslem and Jewish rates in every year since 1923.

12. The decline in the Jewish birth rate has been due in the main to the existence of an essentially different birth rate between the older Jewish population and the immigrant Jewish population. As immigration has continued, the relative imporatnce of the immigrant population has increased, and their generally lower birth rate has tended to decrease the rate for all Jews. In the same way the increasing proportion of Jews in the total population has been a factor in depressing the general birth-rate, quite apart from the effect of the decline within each community.

13. Despite the decline, all the rates are still high compared with those of other countries. The Jewish rate, the lowest, was higher in the decade from 1926 to 1935 than that of any European country except Roumania and despite the fall in the

most recent years it is still surpassed in Europe only by the rates of Roumania and Portugal. The high Moslem rate was, until recently, the highest rate appearing in any published vital statistics. In the last three years (1938-40) this rate fell below 40 per thousand for the first time since 1922, and in most years it has been over 50 per thousand.

14. Palestine in recent years has shown a falling death-rate, from the highest figure of 26.88 per 1,000 (recorded in 1928), to the figure of 18.60 (in 1935), rates in 1936, 1938 and 1939 being even lower. In the five years 1931-35 the rate averaged 20.9 per 1,000. This was higher than for any European country, with the single exception of Malta, but it was exceeded by a number of American and Asiatic countries, as well as by Egypt. In 1935 the rate was below that of Roumania. The fall in the death-rate in Palestine has been chiefly due to the increasing proportion of the Jewish population, which has consistently shown a much lower death rate than that of other communities.

15. The Moslem death rate, however, has also shown a definite decline. In the years 1923-1929 it ranged between 26.39 and 31.74 per 1,000, while in the years since 1934 it has never attained 25 per 1,000. There is evidence of a three-year cycle in the Moslem death rate. The years 1925, 1928, 1931, 1934, 1937 and 1940 showed, with only one exception, higher death rates than the years immediately preceding and following them. The series of these high values, 29.25, 31.74, 26.21, 26.70, 24.86, 24.74, indicates a small downward trend. The Jewish death rate has never exceeded 15 per 1,000 and since 1929 it has been below 10 per 1,000, reaching its lowest point, 7.57 per 1,000, in 1939. Rates below 10 per 1,000 were recorded in the five year period 1931-1935 only in Holland, Australia, New Zealand, Canada, South Africa and Hawaii, and such rates can only be maintained while the age structure is such that very young children and old people, the sections of the population in which the force of mortality is greatest, are relatively few. The lowering of the Jewish death rate in Palestine has been largely due to the immigration of large numbers of people in the early adult period of life when the risk of dying is low, and a considerable part of the lowering of the general death rate of Palestine has followed in consequence.

16. The infant mortality rates for the different communities in all years since 1922 are shown in table 32. All communities have shown a downward trend but the most marked has been in the Jewish community. The Jewish rate was 126.03 per 1,000 live births in 1923; it remained above one hundred until 1928. In that year it fell below one hundred and has since further declined, being below 60 in the last four years. The lowest rate recorded in any country in 1937 was 31 per 1,000 in New Zealand. The only other rates below 60 in that year were Australia (38), Netherlands (38), Sweden (46), Switzerland (47), Latvia (56) and England and Wales (58). The Jewish community therefore experiences a rate that will compare favourably with that of the most advanced countries of Europe. The Christian infant mortality rate, occupying as always an intermediate position between the Moslem and Jewish rates, stood at 107.00 per 1,000 live births in 1940. Its lowest was 100.56 per 1,000 in 1939. The Moslem rate was over 200 per 1,000 on four occasions in the post-war period, the last being in 1929. Since that date it has risen to a peak at three-yearly intervals, the figures being 186.50 in 1931, 175.34 in 1934, 179.31 in 1937 and 147.14 ni 1940. It was below 150 in 1935—for the first time—and has remained below 150 in every subsequent year except 1937.

17. The distribution of deaths according to age and religious community in the years since 1929 is shown in table 34. In order to draw any precise conclusion these deaths at each age require to be related to the population at each age among which they occur. In the absence of recent estimates of population by age only very obvious features can be examined. There is a great difference between the communities in deaths at ages over one month. This difference continues at all ages up to about 15 but it is most striking in the second, third, and fourth years of life. A feature of Palestine mortality statistics is the great loss of life in these early years. In the most advanced countries the loss of life in the first month has proved the most difficult to reduce, but at all subsequent ages of early childhood the loss of life has been reduced substantially, and it frequently happens that the total number of deaths aged 1—4 years (inclusive), falls below that of deaths in the first month.

But in Palestine, in 1940, the losses at those ages, totalling 9,018, were almost five times as great as the losses aged under one month. The Moslem community is the greatest sufferer in this respect, the Jewish community showing an experience more in keeping with that of European countries.

*Migration.**

18. The great extent of addition to the population by immigration has been the outstanding feature of the demography of Palestine under the Britsh mandate. In the years immediately following the Great War, there was a considerable influx of returning emigrants from neighbouring states; but by 1922 the main stream of immigration consisted of new residents, the overwhelming majority of whom were Jewish. Registered Jewish immigrants in the period 1920-40 numbered 310,596.

19. Annual statistics of migration are given, in summary form, in tables 39-46, pages 31-37. The following brief comments will assist in the interpretation of the statistics:

(a) The summary of arrivals and departures (Table 39) affords an accounting of the effect of migration movements on the *de facto* population. The net effect of migration movements in any year on the permanent population may be quite different in amount (or even in sign) from the balance shown in this table since —

(i) Travellers normally form a considerable proportion of arrivals and departures in any year, as would be expected in view of the unique historic associations of Palestine.

(ii) Residents departing from year to year may include a varying proportion of persons who do not intend to return.

(b) For the year 1935 and since, a detailed classification of arrivals and departures has been made, which *inter alia* provides for distinction between residents departing for a period of one year or less and residents departing for more than one year. This permits of the numerical assessment of the effect of migration on the *de jure* population, if residents departing for more than one year are regarded as emigrants**. The balance between immigrants and emigrants so defined compares with the excess of total arrivals over departures as follows:—

	Immigrants less Emigrants	*Excess of arrivals*
1935	58,935	65,867
1936	28,209	22,052
1937	9,835	5,237
1938	11,604	—126¶
1939	13,564	32,589 a)
1940	4,296	13,280 b)

¶ Excess of departures.

(c) In recent years there has been a considerable unrecorded illegal movement across the land frontiers of Palestine and unrecorded illegal immigration by sea.

(d) Immigration is controlled by Government, legal immigrants falling into one or other of the categories shown in Table 41. The volume of immigration is regulated according to defined principles, a major consideration being the economic absorptive capacity of the country.

* For an adequate statistical and interpretative account of migration movements the reader is referred to the Annual Reports of the Department of Migration.

** There is reason for believing that this generally recognised convention does not apply strictly in the case of Palestine.

a) Including 11,156 persons known to have landed illegally in Palestine, and to have remained, although liable to deportation.

b) Including 5,898 persons known to have landed illegally in Palestine and to have remained, although liable to deportation.

AGRICULTURE.

20. Agriculture is the mainstay of the economy of Palestine, although, as indicated elsewhere, there has been considerable development of urban industries in recent years. Furthermore subsistence farming is still the rule over a considerable portion of the country; in spite of the inroads of commercial farming — mainly citrus growing — in the past decade. Some indication of the relative importance of agriculture is afforded by the statistics of geographical distribution of the settled population. The mean settled population of Palestine in 1940 was 1,361,000, of which total 690,000 or 47 per cent. lived in towns and 777,000 or 53 per cent. in the villages. The only rural industry of any importance is agriculture, the village population being supported almost entirely by agricultural pursuits. Again quite a material proportion of town dwellers find agricultural employment — particularly in citrus groves — during part of the year to an extent which would considerably outweigh the fact that the inhabitants of villages bordering on the larger towns often earn a supplementary income by urban work — notably in the building industry. Finally account must be had of the fact that much urban work in Palestine is ancillary to farm production. For example such urban industries as the transport of citrus fruits and the manufacture and repair of agricultural implements are directly dependent on local agriculture.

21. At the Census of 18th November, 1931, the latest date at which comprehensive statistics of the industrial distribution of the population are availble, 53.3 per cent. of the total settled population was directly supported by agriculture. At that time 41 per cent. of the population resided in towns and 59 per cent. in villages. Comparison with the 1940 statistics of town/village distribution (47 per cent. towns; 53 per cent. villages) suggests the existence of some measure of urban drift of population since 1931. It must not be assumed, however, that the importance of agriculture relative to that of other industries has declined in like ratio. On the contrary it might be found that the direct or indirect means of support of a considerable proportion of the increase in town population is to be found in work created by the greatly increased agricultural production — particularly of citrus fruits — since 1931.

22. The character of agricultural production in this country is largely patterned by the peculiar climatic conditions; the entire absence of rainfall during six to seven months of the year, and inadequate water conservation resources, limiting the scope of production. For the most part crops are raised without irrigation, except in the citrus growing areas; but recently there has been a marked increase in the raising of fruits, vegetables and fodder on irrigated land. There are generally two crops harvested each year — cereal and leguminous crops in May and June and a summer crop in August and September. The cereals principally raised in Palestine are wheat, barley and durrah; the country also produces sesame, citrus fruits, melons, olives, grapes, bananas, figs and various other fruits and vegetables. In the north of Palestine tobacco is cultivated. Oranges, grapefruit, lemons and a few other varieties of citrus are grown in the coastal plain and in the Jordan valley and are the main articles of the Palestine exports. Since 1939 considerable progress has been made in vegetable growing.

23. Sheep and goat breeding is widely spread in all the districts of Palestine while the dairy industry and poultry breeding have developed considerably in recent years, especially in the Jewish agricultural settlements. The working animals of Palestine are donkeys, mules, camels and horses.

Agricultural Statistics (Tables 49-51).

24. The data contained in these tables are estimates of the Department of Agriculture and Fisheries, production being estimated, village by village, by the District Officers of the Department of Agriculture. The figures should be regarded as only approximate; exact enumeration of the yield of each crop after harvesting is not practicable. Statistics of yield include produce consumed on the farm as well as that marked for consumption off the farm.The areas shown denote areas of crops in metric dunums. In many instances more than one crop is grown on the same land during each season.

The physical and social conditions of farming in Palestine such as the variety of climatic zones and crops, the multitude of very small farms, the absence of accounts and the somewhat patriarchal ways of farming and trading in certain regions, make the measurement of crops a most difficult task. The figures quoted in Tables 49, 50 and 51 should, therefore, be regarded as rough estimates.

The second part of Table 49 contains index numbers of the volume of crops, except citrus fruits, tobacco and fodder for the dairy industry, based on the actual data published in Tables 49 and 51. The principle of the construction of these index numbers is that of the Aggregate Index; the average crops as estimated during the period 1926 to 1930 are used as a base for comparison, and the average prices recorded during the years 1935 to 1939 (no previous records of prices of most crops are available) are used as weights.

25. In ordinary circumstances the only available measure of the yield of citrus is provided by the statistics of the export of citrus fruits. Citrus fruits are exported in cases and in bulk. Cases of various sizes are in use. The average net weight of a packed case of citrus fruits was estimated at 33½ kilos in respect of the years 1936 to 1938. In the 1938/39 and 1939/40 seasons larger sizes of cases were prevailing, and the average net weight of a packed case was roughly estimated at 37-38 kilos for oranges, 34-35 kilos for grapefruits and 35-36 kilos for lemons. In the 1940/41 season exports of citrus fruits were insignificant.

Production of Tobacco (Tables 52).

26. The areas under tobacco plantations and the crops are registered with the Department of Customs, Excise and Trade each year in accordance with provisions of the Tobacco Ordinance. Since production of this commodity is controlled the statistics can be regarded as more exact than those for other crops.

Animal Husbandry (Tables 58-61).

27. The latest enumeration of the livestock of Palestine was made in 1937, the enumeration being based on the reports of mukhtars (the official village head-men).

FORESTRY.

28. Palestine is practically denuded of natural high forests, though about 140,000 dunums, mainly in the Galilean Hills are covered with scrub forest of some commercial value but of little utility as a natural means of water conservation or as a barrier against soil erosion. Afforestation work in this country is greatly hampered by the existence of grazing rights in a considerable proportion of the few remaining forest areas; but an attempt has been made by Government to conserve existing forests and areas suitable for afforestation, though of little value for other purposes, by the declaration of Forest Reserves on which revival operations and afforestation are carried out. The total area of such reserves and the additions in each of the last two years are shown in Table 62.

29. Private afforestation in Palestine has mainly taken the form of plantings of pine and eucalyptus, some 23,000 dunums having been planted by private agency up to 31st March, 1941. Statistics of such plantings are shown in table 63.

30. It should be noted that available local supplies of wood—mainly for firewood supplies—are implemented to a considerable extent (though quite inadequately) by prunings from olive trees, dead wood from old olive trees and "cut-outs" from citrus plantations The area under olive trees and citrus (582,952 dunums and 299,500 dunums respectively) exceeds very considerably the area under purely forest trees.

31. Imports of wood and wood products are of considerable consequence, amounting to £P.1,135,638 in 1939, 7.8 per cent. of the total value of imports in that year. Wood for citrus cases is an outstanding item in this group, imports of this item totalling 129,376 cubic metres in 1939, valued at £P.567,111.

FISHERIES.

32. Palestine is possessed of adequate fishing resources both sea and lacustrine. In actual practice the full development of these resources has not been possible; the catch of fish—though considerable—accounting for but 25 per cent. of all fish consumed as food and 50 per cent. of consumption of fresh fish. The sea fisheries are spread among a number of fishing centres on the Mediterranean coast, transport difficulties preventing the exploitation of the considerable but undeveloped resources of the Gulf of Aqaba on the Red Sea. The sources of fresh water fish supplies are the Lake of Tiberias and the Huleh lake, while a recent development is the breeding—as yet on a small scale—of fish in fresh water ponds. The output of the sea fisheries (in which before the war a number of foreign trawlers were engaged in addition to Palestinian boats) exceeds considerably that of the lakes.

33. Statistics of landings of fish are shown in Tables 64 and 65. The output is recorded by the Fisheries service of the Department of Agriculture and Fisheries, the values quoted representing prices paid to the producers.

MINERALS.

34. The mineral resources of Palestine capable at present of commercial exploitation are very restricted. As far as is known metallic minerals do not exist, nor does coal. The country, has, however, unique mineral resources in the Dead Sea—a highly concentrated solution of the chlorides of sodium, potassium and magnesium, also containing some bromine. Gypsum, limestone and clay for cement are also exploited while building stone of good quality abounds in the hill districts. Salt in a practically pure state is available in practically unlimited quantities at Jebel Usdom near the Dead Sea, where it is hewn in blocks; while at Athlit salt is extracted from sea water basins by evaporation, the bulk of supplies being taken from this source. Sulphur is mined in Southern Palestine. Statistics of exports of Dead Sea chemical products (bromine and potash) are shown in Table 76, production of salt in Table 198 and production of cement in Table 200.

INDUSTRY.

35. While, as indicated earlier, Palestine is—and must be for many years to come—essentially an agricultural country there has been a very substantial industrial development during the past fifteen years. Imports of capital equipment for industrial enterprises have contributed very largely to the greatly increased flow of imports: and with the establishment of these industrial plants local production of manufactured products for home consumption has become increasingly important. In addition a not inconsiderable export trade in manufactured commodities has developed both in processed local raw materials—e.g. Dead Sea chemical products, essential oils, and in manufactures from imported raw materials, e.g. wearing apparel, vegetable oils, polished rice, artificial teeth. Very small scale industries and handicrafts still predominate, though many of the traditional handicraft industries have been subjected to an increasing pressure of competition from cheap imported goods and also, to some extent, from the products of the relatively newly established local factories. Changes in habits of consumption have also adversely affected the market for many handicraft products; though, on the other hand, the substantial tourist trade* stimulated production and export of some classes of local handicraft products—notably articles of piety. The character of industrial production in each of the more important divisions and the statistics of recent development are referred to, briefly, in the following paragraphs.

Manufacturing.

36. Both handicraft and factory industries produce, in general, goods for local consumption such as foods, beverages, tobacco and cigarettes, clothing, furniture, building materials, newspapers and magazines, tools, stationery. The chief articles of industrial export are Dead Sea chemicals, cement, alcoholic beverages, — all made from local material; souvenirs and vegetable oils, partly from local material; and wearing apparel, chocolate, artificial teeth — made from imported materials.

* At present reduced to relatively minor proportions owing to political conditions—here and abroad.

37. The first official census of manufacturing industries was taken in 1928 and covered 3,505 industrial undertakings in which 17,955 persons were employed, including owners, technical and clerical personnel and contract labour. A further census was taken during 1940 but, the results are not yet available for publication. As regards Jewish industry and hadicrafts, censuses have been taken by the Jewish Agency for Palestine and resulted in the following summary figures:—

	establishments No. of	Persons employed	Value of annual output £P.
1930	2,475	10,968	2,510,000
1933	3,388	19,595	5,352,000
1937	5,606	30,040	9,109,000

More detailed statistics of the 1937 census of Jewish manufacture are published, by the courtesy of the Jewish Agency, on pages 171-173.

38. The only statistics of manufacture collected and compiled by Government since the industrial census of 1928 relate to manufacture of commodities subject to excise duties and to production of cement. Following are observations on the figures which are given in Tables 195-197.

(a) The production figures quoted in respect of tobacco, tobacco products, salt and matches are derived from excise returns and correspond to annual deliveries and not to actual output.

(b) Statistics of production, as well as deliveries of intoxicating liquors are available. The figures, (quoted in Table 196) of alcoholic content of spirits (arak, cognac and other spirits) do not necessarily show a balance between production, consumption and export. Arak may be re-distilled from other spirits; cognac may be used in fortifying wine, while surplus production of potable spirits may be converted into methylated spirits for industrial use.

Building Activity.

39. Apart from agriculture, building and the manufacture of building materials constitute the most important industrial group in Palestine. Building activity was particularly high in the years 1933—35 owing to the arrival of large numbers of new settlers and a consequently chronic shortage of housing accommodation. Building activity decreased towards the end of 1935 and the disturbed political conditions since that year have resulted in a fall in building to a level only a fraction of the 1933—35 totals (vide page 52). Stone quarrying and dressing and the manufacture of cement are the most important of the industries directly connected with building.

Statistics of building activity in municipal areas are published in Tables 66 and 67. These figures are based on permits issued by the municipal authorities; so that the figures for any period do not necessarily indicate exactly building activity in that period, since permits may be taken out some time prior to the actual commencement of work. The figures of square metres of floor area of new building authorised in the four towns published in Table 68 afford a good indication of fluctuations in the quantum of building production in those towns, subject, particularly in respect of short period comparisons, to the qualification indicated above.

Electric Power.

40. The development of electric power production in Palestine in the past decade has been remarkable. The chief producers of electricity are the Palestine Electric Corporation Ltd. and the Jerusalem Electric and Public Service Corporation Ltd. The former owns steam generating stations at Haifa and Tel Aviv and a waterpower station at Naharayim on the Jordan. The latter owns a generating station in Jerusalem. In 1940 the combined sales of both corporations exceeded 100 million kilowatt-hours. More than half of the power sold was used for industrial purposes and irrigation; many of the local factories and workshops are electrified, and there is extensive rural electrification in the Jewish settlements and in the orange groves of the plains.

Statistics of the sales of electric current by the Palestine Electric Corporation and the Jerusalem Electric and Public Service Corporation are published in Table 198.

RETAIL AND WHOLESALE TRADE.

41. There are no official statistics of wholesale or retail trading; but by the courtesy of the Jewish Agency, summaries of statistics of Jewish retail and wholesale trade in 1937 are published in Tables 210 and 211.

FOREIGN TRADE.

(NOTE—Owing to the abnormal features of trade during 1940, this year is excluded from the following analysis of the trade of Palestine).

42. During the period of British Administration the foreign trade of Palestine has shown a remarkable increase. The value of exports has increased from £P.1,412,520 in 1923 to £P.5,117,769 in 1939; while imports increased from £P.4,948,907 to £P.14,632,822 in the same period. The relatively high importance of foreign trade in the economy of this country is illustrated by the following table showing, in Palestinian pounds, foreign trade per head of population in Palestine and in neighbouring countries during 1938:—

Foreign Commodity trade per head
Year 1938

Country	Imports	Exports	Total Foreign Trade
	£P.	£P.	£P.
Palestine	8.0	3.4	11.4
Egypt	2.3	1.8	4.1
Iraq	2.6	0.9	3.5
Syria	2.3	0.9	3.2

The "adverse" balance shown in the case of Egypt is not typical; in most years that country has a credit visible trade balance. Iraq, Syria and Palestine have had in recent years consistently "adverse" visible trade balances; but, as indicated by the table, the foreign trade of Palestine per head is very much larger than in these other countries—as is the excess of imports.

43. Analysis of the commodity trade statistics of Palestine over a period of years indicates the existence of a persistent import surplus. During the quinquennium 1923-27 the value of exports was 25 per cent. of that of imports while the average ratio in 1935-39 was 32 per cent. The maintenance of a visible trade situation of such unbalance over a long period of years is an indication of the existence of a considerable inflow of credits on account of invisible items, the most important contributing sources being: (1) Imports of capital (2) Tourist expenditures, donations to religious organisations, etc. The gap between exports and imports lessened considerably between 1935 and 1938; but the ratio of exports to imports fell in 1939 due to decreased exports of citrus fruits — a consequence of shipping difficulties owing to the War. Following are quotations of percentage ratios of exports to imports:— 1935, 25; 1936, 30; 1937, 39; 1938, 48 and 1939, 35. The reasons for the advance in the ratio of exports to imports are: (1) the growth in exports consequent on the rapid development of the citrus industry and the increased exports of certain manufactured commodities and (2) the decline of import trade from the 1935 peak level—due partly to lowered immigration and partly to the disturbed condition of the country.

44. While the persistence of a markedly adverse visible trade balance is probably the most striking feature of the foreign commodity trade of Palestine, the distribution of that trade also shows special characteristics of considerable social and economic significance. The dominance of citrus fruits in the export trade is particularly striking, exports of citrus fruits accounting for 77 per cent. of the total value of exports in the quinquennium 1935-39, and 66 per cent in the twelve months ended in May, 1940. Dead Sea chemicals—Potash and Bromine—have become, after citrus, the next important item of export. Soap, once second in importance, has declined with the virtual closing of the Egyptian market. There are no other very large items but noteworthy are—artificial teeth, vegetable oils, polished rice, cotton yarn and threads. The dependence of Palestine's export trade on the citrus industry is of

great moment; income from exports, and the well-being of a large section of the community, are closely dependent on prices received for citrus fruits in overseas markets. The restriction of markets for any considerable quantity of citrus exports** and the sensitivity of prices on these markets to increasing supplies of citrus fruits has resulted in a situation in which artificial restriction of the growth of the industry has become necessary. Even without further planting the crop available for export will increase as young plantations become more mature and Palestine is faced with the problem of marketing an ever increasing crop.

45. While the export trade of Palestine is of very limited range, imports are widespread. Imports of food-stuffs are still of considerable importance—particularly in years of poor cereal harvests. While agricultural production for local consumption has increased very materially in recent years both in quantity and variety of commodities (vide page 39) production of the considerable range of such commodities that can be successfully raised in Palestine is not yet sufficient for the growing needs of an increasing population. Consequently imports of food have tended to account for a relatively constant proportion of a vastly increased import trade; the percentage of imports of food to total imports in the quinquennia 1923-27 and 1935-39 being 27 and 25 respectively.

46. Imports of "articles mainly manufactured"—which omnibus heading, incidentally, disguises the inclusion of a wide range of capital equipment—have increased from an annual average value of £P.3,358,992 in the quinquennium 1923-27 to £P.8,754,469 in the quinquennium 1935-39. While a precise classification of imports according to the purpose for which they are intended is not yet available, a rough indication of the extent to which capital equipment and raw materials for industry contribute to the import trade of Palestine is afforded by the following necessarily incomplete enumeration of commodities of this nature included in the import trade of the year 1939:—

Imports of certain industrial materials — 1939.

	£P.
Raw materials and articles mainly unmanufactured	1,481,000
Iron and steel and manufactures thereof	1,105,000*
Non-ferrous metals and manufactures	170,000*
Miscellaneous tools and implements	90,000
Electric cable and wire	49,000
Machinery	916,000
Prepared wood for citrus cases and other industrial purposes	652,000
Yarns and tissues	902,000
Leather	136,000
Chemicals, drugs and fertilizers	354,000
Paper and paper manufactures	276,000*
Sacks and bags	62,000
Personal effects (say)	150,000*
Total	6,343,000

* Excluding the value (arbitrarily estimated) of consumers' goods coming under these headings.

** Four countries took 91.0 per cent. of citrus exports in 1939-40 — United Kingdom 67.9 per cent; Holland 12.2 per cent; Belgium 6.6 per cent. and Sweden 4.2 per cent.

The total of the above items (£P.6,343,000) represents 59 per cent. of the combined value of imports of raw materials and manufactured commodities in 1939 and 43 per cent. of the total value of imports in that year. In addition, account should be taken of the fact that a considerable proportion of imports of motor vehicles, motor spirits and lubricating oils may be regarded as the "raw material" requirements of the road transport industry. The value of imports of these items in 1939 was £P.795,000. The figures quoted in this paragraph afford evidence of the high importance of capital equipment and producer's materials in the import trade of this country.

47. A close relationship is normally observed between changes in the ratio of imports and in the flow of immigration. In fact imports of manufactured goods which, as indicated above, include a large quantity of capital equipment, were in almost straight line relationship with the number of immigrant arrivals.* Imports of the personal effects of immigrants—which item includes the tools of trade, furniture, etc. of intending settlers—are high compared with the figures for most countries. The value of imports of this item in 1939 was £P.749,335, 5 per cent. of the total value of imports. It should be noted that imports of personal effects, though quite properly included in the trade accounts, do not represent a charge on Palestinian funds; while, again, such part of other imports of capital goods as represents the equipment of newly arrived immigrants (e.g. the machinery equipment of immigrant manufacturers) cannot be regarded as a charge on exports. The latter fact is of particular consequence in the case of immigrants from countries where restrictions on the purchase of foreign exchange are operative.

Explanatory Notes on the Statistical Tables.

48. Statistics of foreign trade, in summary form, are included on pages 55—76 (Tables 69—79). More detailed statistics are published in the Blue Book and in the annual publication "Statistics of Imports, Exports and Shipping" while monthly trade statistics are included in the General Monthly Bulletin published by this Office. Consideration of the following limiting factors and definitions of terms is necessary towards a proper understanding of the significance of the figures:—

(i) Trade with Trans-Jordan is not included in the statistics. According to the Trans-Jordanian statistics of trade Trans-Jordan exported to Palestine in 1940 goods to the value of £P.750,725, while that country bought from Palestine in the same year Palestine produce valued at £P.154,576 besides foreign goods duty paid in Palestine subsequently consumed in Trans-Jordan valued at £P.303,486. The import of Trans-Jordanian produce is confined to a few commodities, the import of cereals being the major item—particularly in seasons of poor harvest. This fact is of considerable importance in the interpretation of recorded statistics of imports of these commodities. For example the import statistics show that imports of wheat in 1940 totalled 44,308 metric tons; but, in addition, there was an import from Trans-Jordan of 51,748 tons.†

(ii) Imports of military stores and equipment and N.A.A.F.I. stores (commodities for consumption by His Majesty's Forces) are now excluded from the totals of imports quoted in statistical publications** the exclusion dating from the beginning of 1938. These commodities are included in the figures compiled for previous years — prior to 1937 as miscellaneous and unclassified items, and, in 1937, in the itemised accounts. Prior to 1936 the amount involved was not large but imports of this class in 1936 were valued at £P.579.095; and in 1939, at £P.2,521,036 — a total of some consequence as compared with the total value of all other imports (£P.14,632,822).

(iii) Personal effects are included in the recorded totals of imports as is customary in countries where immigration is significant. The values given for this item must, from its nature, be regarded as approximations only.

* In this connection imports of building materials are of considerable consequence.
** The figures are, however, still compiled but shown separately.
† Secured from Trans-Jordan statistics.

(iv) Exports are valued at the values declared by exporters at the time of export: the basis of valuation is "free on board" at port of loading. The value of imports represents the value which an importer would give for the goods delivered to him at the port of import free of freight charges, insurance and all other costs to the port of import — but not customs duties. Valuation of citrus fruits presents a difficulty in that there is a time lag of at least 14 days between the shipment of the goods and their sale overseas. Consequently in a period of rapid price change, the exporters' estimate at the time of export is subject to an appreciable margin of error. The matter assumes importance — particularly in short period comparisons — in view of the high importance of citrus fruits in the export trade of this country*. Valuation of exports of citrus fruit in bulk must be regarded as approximate only. Most of this fruit is of second grade quality (large sizes) exported to Syria in many instances for what it will fetch. Bulk exports are, however, relatively unimportant.

(v) The statistics of exports are compiled from the Customs manifests. Owing to the fact that some time must inevitably elapse between the actual movement of goods and completion of the documents, statistics of exports and statistics of loading will not relate to exactly corresponding periods of time. Consequently short period statistics of shipments and of exports differ — in some instances quite materially.

(vi) In the interpretation of annual statistics of trade consideration must be given to the fact that the calendar year—the most convenient time unit for international comparisons—does not correspond with the export season. For example exports in the calendar year 1939 include the peak months of the 1938/39 citrus export season and the early months of the 1939/40 season, while the early exports of the 1938/39 season come within the calendar year 1938. Exports of the new season's crop are normally heavy in the first three months of the year, with the result that quite a different picture may be presented by export statistics on a calendar year basis from that shown by exports for single complete seasons. (Table 74 gives citrus exports for years ending in May.)

(vii) Statistics of trade with individual cauntries (Tables 75-77 pages 73-75) are subject to certain reservations. Imports are recorded by country of origin which is easily ascertainable from the documents, but the final destination of exports is not always known at the time of export**. This is a universal difficulty; estimates of the balance of trade between any two countries invariably disagree according to the accounts of each country concerned to a greater extent than is accounted for by differences in the basis of valuation. A point of particular significance in the interpretation of Palestine statistics of trade by countries is the relatively high proportion of personal effects in the imports from certain countries. For example, imports of personal effects from Germany in 1939 totalled £P.525,751, 33 per cent. of the total value of imports from that country. This item is in a somewhat different category from normal commercial trading.

(viii) Statistics of import trade by countries for years before 1934 are classified according to countries of consignment; while the figures for 1934 and subsequent years are on the basis of country of origin (vide Tables 75, 77).

(ix) Statistics of trade in living animals not for food (value in 1939 £P.33,671) are subject to considerable reservations. In the first place valuation is difficult; while, again, it is not easy to establish the country of origin. For example many camels arrive in Palestine from Trans-Jordan (not recorded in the statistics) and subsequently move to Egypt. Since 1938 an endeavour has been made to classify such animals as re-exports.

(x) There is a transit trade of some consequence through Palestine to and from Iraq by the trans-desert motor route. This trade was not recorded prior to 1935 but has since been included in Palestinian transit statistics (value in 1936, £P.192,418).

* This difficulty is not peculiar to Palestine but is encountered in the countries exporting products of the soil for auction overseas.
** For example oranges may be consigned to the United Kingdom and subsequently sold there to a continental purchaser.

(xi) Exports of Bromine recorded in the export statistics represent quantities drawn each month from the company's stocks. These stocks are located not in Palestine but at Port Said. Transit from the Dead Sea to stock is not compiled.

(xii) Trade statistics for 1940 exclude petroleum products, Dead Sea chemicals and certain other commodities. Moreover, imports and exports of bullion and specie are withheld from publication.

(xiii) Miscellaneous inclusions and omissions—

(a) Ships stores and bunker coal and oil are not included in the statistics of trade.

(b) Bullion and specie is shown separately and not included in the general totals. Specie is shown at its face value.

(c) Fish arriving from the sea fishing grounds in Palestinian boats is not included.

(d) Crude oil loaded at Haifa from the I.P.C. pipe line from Iraq is not included in the statistics of transit trade, but is recorded and published separately. The oil is valued at an arbitrary price in the statistics (800 mils per ton).

(e) Imports of Government stores are included in the itemised accounts of trade for 1937, 1938, 1939 and 1940.

(f) Imports by all institutions entitled to exemption from import duties were compiled only under the consignee headlings prior to 1937. In that year they were itemised as far as possible and included in the general totals shown for each appropriate item. After 1937 military and N.A.A.F.I. stores were excluded; but imports by other institutions entitled to exemption continue to be included in the itemised statistics.

TRANSPORTATION AND COMMUNICATION.

Ports.

49. The ports of Palestine open for customs purposes are Haifa, Jaffa (including Tel Aviv), Acre and Gaza. The only modern harbour is the one at Haifa, providing a depth of 30 ft. alongside the main quay. Jaffa port contains a small craft harbour at Jaffa and a lighter harbour at Tel Aviv. At Jaffa and Tel Aviv vessels anchor at open roadstead, and cargo is discharged into lighters which in turn discharge at quays inside the small craft harbour or the lighter harbour. Large vessels rarely call at Acre and Gaza.

The construction of the Haifa harbour was completed in 1933; loading and discharge of goods at Tel Aviv lighter harbour commenced in 1936.

Coastal trade and internal water transport are insignificant in Palestine.

Statistics of Shipping.

50. The shipping statistics of Palestine (Tables 80-88) are derived from the records of vessels entered at and cleared from the ports of Palestine, kept by the Port Managers. In the part relating to the aggregate weight of cargo discharged and loaded these records are supplemented by the records kept at the Customs Stations.

The tonnage of cargo and the registered tonnage of ships are given to the nearest ton in all cases. The tonnage of vessels denotes the registered net tonnage, according to the regulations adopted in the countries of registration. The tonnage of cargo handled at ports is shown in metric tons of weight.

As from 1938 the figures relating to Sailing vessels include small motor boats.

Railways.

51. The railway system of Palestine comprises three main sections:—

(a) The standard gauge Palestine Railway, running from Haifa to Rafah on the Egyptian border and with branches from Lydda to Jerusalem and Jaffa. A short branch to Petah Tiqva is partly owned by that colony. The total length of this system is 333 kilometres.

(b) The Sinai Railway (Kantara—Rafah line) crossing the Sinai province of Egypt, owned by His Majesty's Government and worked by the Government of Palestine connects Palestine with the Egyptian railway system at Kantara on the Suez Canal. Its length is 203 kilometres.

(c) The narrow gauge Hejaz Railway, including Haifa—Acre, Haifa—Samakh and Tulkarm—Nablus sections in Palestine and the Nassib—Amman—Ma'an section in Trans-Jordan the last section being used by the Trans-Jordan Government though operated by the Palestine Government. The length of the line in Palestine is 144 kilometres, and in Trans-Jordan 323 kilometres.

The total length of the railways on the territory of Palestine is therefore 333 kilometres of standard gauge and 144 kilometres of narrow gauge (105 cm.).

Railway Statistics (*Tables* 89-95).

52. All figures except those shown in Table 95 relate to the financial years ending 31st March. Table 89 shows capital investment in the Palestine Railways and the lines operated by the Administration of the Palestine Railways. The figures in italics denote the amounts invested by the Palestine Railways in other Operated Lines. The figures in italics in Table 91 show the deficit of the Railways. Tables 92 to 95 contain an analysis of the traffic and the financial results of the Palestine Railways and Operated Lines for a number of years.

Road Transportation.

53. The length of all weather roads in Palestine at the end of 1940 was 2,340 kilometres. In addition there were 1,588 kilometres of dry-weather roads. The recent years have witnessed a rapid development of motor transport. Regular communication is established between the cities of Palestine, serving both passengers and goods traffic.

There are no tramways in Palestine. Inter-urban communication is effected by omnibuses and by fleets of motor cars licensed as public vehicles.

Motor Vehicles Statistics (*Table* 96).

54. The registration of motor vehicles is effected by the Traffic Offices which are a part of the Department of Police and Prisons. All motor vehicles brought to Palestine for use on roads have necessarily first to be registered and thereafter licensed annually. The lists of motor vehicles registered are periodically revised. The difference between the figures for "Registered" and "Licensed" represents the number of motor vehicles in the country still registered but not actually in use, some of which are no longer fit for use.

Commercial Road Transport Statistics (*Table* 98).

55. The figures presented in Table 98 are directly supplied by six large road transportation agencies, all the six agencies being Jewish co-operative societies. The lines operated by these societies connect localities where the Jewish population is concentrated.

Statistics of Road Accidents (*Tables* 99 *and* 100).

The statistics of roads accidents are compiled by the Police authorities on the basis of the records kept by the Traffic Police. No records are available for 1938.

Civil Aviation (*Table* 101).

56. Air services in Palestine make use of three aerodromes at Lydda, Haifa and Tel Aviv and two seaplane stations—at Haifa* and Tiberias—customs and migration

* Emergency Seaplane Station.

facilities for travellers abroad being provided at all stations except Tel Aviv. There is also a landing ground for local flights at Ashdot-Yaakov in the Jordan Valley. Local services provide communication with Cyprus, Syria, Egypt and Iraq, and there are through services to England, India, the Far East and Australia.

Statistics of civil aviation are now being compiled from the log books kept at each landing station. Full information is available only since January, 1939.

Posts, Telegraphs, Telephones, Wireless.

57. Postal despatches are exchanged regularly between all principal cities of Palestine. At the close of 1940 there were 59 post offices and 23 postal agencies. The length of the telegraph and telephone lines was 104,723 kilometres in local systems and 22,426 kilometres in trunk lines. The number of telephone instruments in use was 18,357. A broadcasting station, operated by the Government, was established in 1936, and daily programmes are chiefly transmitted in English, Arabic and Hebrew. The number of wireless receiving licences in force at the end of 1940 was 47,804.

Statistics of the operations of the Department of Posts and Telegraphs are given in tables 102-104.

PRICES.

58. Statistics of wholesale and retail prices are collected by the Government Statistician at weekly intervals, index numbers being compiled from this data affording a measure of the direction and extent of price changes in Palestine. The methods of comilation and limits to the application of the statistics are indicated in the following paragraphs:—

Wholesale Prices (*Tables* 135-138).

59. Statistics of wholesale prices in the four main towns, from which monthly index numbers are compiled, are collected by the Government Statistician. Prices ruling on Thursday of each week are collected, from which monthly average prices are computed. This system was brought into operation in 1936 but a historical table (table 138) giving a continuous series of index numbers back to 1920 has been constructed from a pre-existing series of index numbers compiled for those years by the Department of Customs. The commodities included in the present index are 53 in number, subdivided into three groups; Grain and Meat (18 items), Other Foods and Fruit (21 items) and Fuel and Miscellaneous (14 items). Separate index numbers are compiled for each group as well as an all-groups index; but index numbers are not compiled for individual towns, nor is a distinction made—as in the case of retail prices—between the Arab and Jewish communities. The wholesale prices index is an unweighted geometric average of month to month price ratios chained to June, 1936, as base. While the index adequately covers foods marketed at wholesale it does not, as yet, give a sufficient representation to producers' materials and consumers' goods other than foods. The reconstruction of the index is under consideration; and to this end the number of commodities for which prices are collected has been increased, including building materials. Statistics of prices of building materials are published in table 136.

60. While the majority of imported commodities can be adequately represented in a wholesale price index for Palestine, the position in respect of locally produced commodities is not so strong. For example much local wheat (and also a considerable proportion of imported wheat) does not come on the Palestinan wholesale market but is purchased direct by the millers by private treaty with the growers (or overseas merchants). Again perishable farm products grown by Arab farmers are often sold direct from grower to final consumer, though most Jewish produce of this type is marketed at wholesale through marketing societies.

Retail Prices (*Tables* 139-142).

61. Until January, 1940, statistics of retail prices were collected from Arab and Jewish retail markets in Jerusalem, Jaffa, Tel Aviv and Haifa at monthly intervals, the prices quoted in tables 139-142 being market prices on the 15th day of the month. Through the courtesy of the Municipal Corporations who act as district agents for this

Office in the collection of retail prices statistics, the Office has been able to collect the quotations at weekly intervals since January, 1940. The index numbers for 1940 are, consequently, based on monthly average prices, i.e. the average of four or five weekly quotations, a procedure which gives more accurate results than the collection of price quotations on a single day in the month. The units of quantity for which retail prices quotations are collected and published are the local units of weight and measure in which trading is actually carried out — (vide page 1 for metric and British equivalent).

62. In addition to compiling and publishing records of prices of certain essential commodities, the Office of Statistics also compiles an index number indicative of average changes in retail prices (vide table 139). With the introduction of the new system of collection and in view of the difficulty of carrying out a family budget inquiry, the Office of Statistics has revised its cost of living index numbers.

The principal changes brought into effect have been:—

(a) differentiation between the Arab and Jewish urban communities, a separate index being compiled for each community. (The previous index related to an average urban Palestinian family without distinction between communities).

(b) the compilation of separate indices for each community in each of the four main towns, Jerusalem, Jaffa, Tel Aviv and Haifa, as well as an average index for each community for Palestine as a whole. (Previously only one index was compiled for the whole of Palestine based on averages of prices in Jerusalem, Jaffa and Haifa; Tel Aviv, a small town in 1922, was not included.)

(c) the revision of the list of commodities and the bringing up to date of the weighting of the various commodities included in the index numbers. For this purpose, in the lack of a family budget inquiry, the Office of Statistics had recourse to various official and non-official sources of information including direct inquiries from a number of housewives.

63. The revised series of index numbers relate almost exclusively to food commodities, only two non-foods (kerosene and soap) being included. The index thus falls far short of completely covering all items entering into the cost of living of the average family and should not be interpreted as measuring changes in the cost of living. It is obvious that rentals or clothing prices, for example, may move to a greater or less degree or even in a different direction from food prices. Nevertheless, despite this limitation to its application, an index number of food prices serves a very useful purpose particularly in present circumstances. Family budget investigations carried out in other countries indicate that expenditure on food accounts for a very considerable proportion of total household expenditure ranging between 29.5 per cent. to 63.9 per cent.

LABOUR STATISTICS.

Wages Rates (*Tables* 105-110).

64. The information on the predominant and average daily wage rates was extracted from employers' returns in respect of Arab and Jewish labour and from reports of the labour unions in respect of Jewish labour. The information on wage rates in agricultural employment is supplied by the Agricultural Officers of the Department of Agriculture and Fisheries, by Farmers' Organisations and by labour unions. The index numbers of daily wage rates paid to Arab labour are based on employers' reports, those relating to Jewish labour are based on the union scale of wage rates supplied twice a year by the General Federation of Jewish Labour in Palestine. The index number for each industrial group is weighted by the number of earners who were engaged in the corresponding industry in November, 1931, when the last Census was taken, Jewish weights being determined in each case by the number of Jewish earners and Arab weights by the number of non-Jewish earners in the industries. Since 1937 revised Jewish weights are used—based on the Census of Jewish Industry carried out in that year by the Jewish Agency for Palestine. No weights are used for each occupational group within industrial groups. For fuller description of the method used in the construction of the Palestinian index numbers of wage rates the reader is referred to the Wage Rates Statistics Bulletin issued by the Office of Statistics.

The information on the prevailing hours of work was extracted from the employers' returns of wage rates. In the Jewish industries an eight hours' working day is the rule, though longer hours are worked in a number of industrial undertakings. In many industrial undertakings the weekly hours of Jewish workers are less than 48, in many such cases being 47 hours per week.

Labour Disputes (*Tables* 115-121).

65. Information on labour disputes in the years before 1938 was supplied by officers of the District Administration. Since January, 1938, reports on labour disputes, their causes, terms of settlement, workers involved, time lost, etc., were obtained directly by the Office of Statistics from the employers affected and from employers' and workers' organizations. Only disputes caused by demands of an economic nature are included. Tables 115 to 121 contain information on strikes and lockouts, i.e., cases of disputes where temporary stoppage of work has been wilfully effected by employers or by the workers employed at the establishments under dispute. No distinction is made between strikes or lockouts. Cases where work has been stopped for less than one day are not regarded as strikes or lockouts, nor are cases of sabotage without stoppage of work included in these tables.

66. Other definitions and rules adopted in the collection and compilation of the official statistics of labour disputes in Palestine were explained in detail in the Labour Disputes Bulletins issued by the Office of Statistics.

Statistics of Industrial Accidents (*Tables* 122-134).

67. The statistics of industrial accidents in Palestine are extracted from the annual returns of injuries and compensation supplied by employers of labour in specified industries in accordance with Section 10 of the Workmen's Compensation Ordinance. Due to certain changes in the interpretation of the Workmen's Compensation Rules in force and in the administrative procedure, the number of cases reported in 1939 showed an appreciable increase as compared with previous years. A further increase in the number of reports is expected in the future. There is a year's delay in the compilation of the statistics of industrial accidents as under the existing rules the employers are allowed a period of eleven months after the close of the year under report, to submit their annual returns.

For fuller particulars of industrial accidents in Palestine, methods of collection and compilation, legislative measures, etc., the reader is referred to the Industrial Accidents Statistics Bulletins issued in 1940 and 1941.

Employment (*Tables* 111-114).

68. Statistics of employment in Palestine have been collected by the Office of Statistics since the beginning of 1938. No data are available for periods prior to January, 1938. Returns are collected each month from 368 employers of labour containing three items (1) Number of employees (2) Man-days worked during the month (3)Amount of Pay-roll. The following observations are necessary as a guide to the proper use of these statistics as a measure of changes in the employment situation:—

(a) The figures as yet cover only a part of the employing establishments in the country—notable omissions being the bulding industry, road transport trading and financial institutions.

(b) Owing to the limited scope of the statistics, Government Departments are over-represented in the sample — though this difficulty is in part met by the separation of salaried employees and daily wage earners in the statistical compilations. The figures given relating to daily wage earners in 330 manufacturing establishments form the series most significantly indicative of current economic trends.

(c) Statistics of number of employees represent the total number given employment during the month—irrespective of the length of time worked. The statistics of man-days worked (1 man working 1 day=1 man-day) thus form the more accurate indication of trends in employment.

(d) While changes in the amount of pay-roll are significant and interesting, it must be remembered in the interpretation of these statistics that pay-roll represents a combination of several variables and does not necessarily fluctuate in exact relationship to changes in employment. In particular it has been observed that in some industries a fall in pay-roll is, on occasion, less than a fall in employment; due to the retention by some manufacturers of a skilled and relatively more highly paid cadre of skilled employees, and the dismissal of less skilled workers.

(e) The monthly index numbers of employment are adjusted for variation in the number of working days in each month; and thus relate as nearly as practicable to equal intervals of possible working time.

GOVERNMENT FINANCES.

69. Government revenue fluctuated in the first ten years of the civil administration between £P.1,675,000 and £P.2,500,000 per year. In the four years 1932/33 to 1935/36 annual revenue increased rapidly, reaching £P.5,770,457 in 1935/36; with the disturbed conditions of the succeeding years revenue fell to £P.4,897,456 in 1937/38, but rose to about 6 million pounds in 1938/39, to £P.6,868,000 in 1939/40 and to approximately £P.8,436,000 in 1940/41. The increase in revenue during the years prior to 1935/36 was accompanied by a substantial change in the relative importance of the main sources of revenue; receipts from Customs duties tending to form a much greater proportion of total revenue than was the case formerly (27.0 per cent. in 1921/22, 47.7 per cent. in 1935/36). This is not surprising in view of the rapid development of the country in the fifteen years prior to 1935/36. The share of customs revenue to total revenue fell to 40.8 per cent. in 1937/38, to 32.1 per cent. in 1938/39, and to 29.4 per cent. in 1939/40, owing to the rise in grants-in-aid received from H.M. Government. It will be observed, however,, that revenue derived from Customs duties accounted for 43.6 per cent. of revenue derived from local sources in 1939/40.

70. Revenue from taxes on agriculture has tended to become relatively less important since the last War. Such taxes (the tithe, animal tax and rural house and land taxes) formed the main source of revenue under the Turkish regime and in the early years of the post-war civil administration. Revenue collected from tithes and animal tax in 1922/23 totalled £P.249,399, 13.8 per cent. of total revenue, and, in 1939/40, only £P.33,828—0.5 per cent. of total revenue. The fall in the yields from these taxes has been due partly to a succession of bad harvests and partly to considerable modification of the system of land taxation. The tithe was reduced from 12½ per cent. of the gross yield of farm produce to 10 per cent. (in 1925), replaced by a commuted tithe (in 1928); and finally the tithe and house and land taxes were abolished in 1935 being replaced by the Rural Property tax. The latter tax, introduced on completion of a topographical survey of rural areas, varies according to the class of land; the rural areas being classified into 16 categories according to quality of land, citrus land paying the highest tax per dunum while the rate is progressively reduced on poorer classes of land, no tax being paid on uncultivable land. In 1939/40 the rate on citrus land was reduced from 400 mils per dunum to 150 mils per dunum; in Acre sub-district the rate remained at 40 mils per dunum. In 1940/41 the tax on land planted with citrus was abolished.

71. Government expenditure kept pace with revenue during 1920 to 1932; but in the boom period of the succeeding years lagged behind the rapidly rising revenue returns, with the result that by the end of 1935/36 a surplus of £P.6,627,810 had accumulated. In the disturbed conditions of the subsequent years total expenditure increased owing to heavy expenditure on security measures while at the same time rveenue declined sharply, reducing the surplus balance to £P.2,533.265 on 31st March, 1939. In 1939/40 revenue exceeded expenditure by £P.863,489, owing to considerable grants from H.M. Government in the United Kingdom. The cumulative surplus balance at 31st March, 1940, including appreciation of investments amounted to £P.3,396,754.

The Statistical Tables (*Tables* 143-146).

72. Statistics of revenue in each year since 1920 are published in Tables 143-144 and statistics of expenditure in Tables 143 and 145. The setting up of an independent Treasury to administer the country's finances as a part of the civil administration dates back to July, 1920. The fiscal year, originally adopted for the Treasury's

annual statements and accounts, covered a period from 1st April to 31st March; the first full fiscal year began on the 1st April, 1921, and terminated on the 31st March, 1922. In 1927, the fiscal year was made to coincide with the calendar year, but in 1932 the original fiscal year (1st April to 31st March) was reinstituted. To facilitate comparisons figures of total revenue and expenditure for the whole period from 1920 to 1938/39 published in Table 132 have been recast on basis of a uniform fiscal year (from 1st April to 31st March).

73. The analysis of revenue published in Table 144 is grouped into 12 main headings; the most important of these being Customs; Licences, Taxes, etc.; Fees of Courts and office, etc.; and Posts and Telegraphs. It should be noted that until 1929 the gross revenue and gross expenditure of Railways appeared in the appropriate headings of revenue and expenditure; but, as from 1929, only the net excess of railway receipts appears under revenue, or, alternatively, the net railway deficit appears as an item of expenditure.

74. Two of the important classes viz. Licences, Taxes, etc., and Fees of Courts and Office, etc., into which revenue is divided in the Summary in Table 144 include a variety of items all of which do not move in concert. The relative fall in importance of licences, taxes, etc., as a revenue heading (comprising 14.4 per cent. of total revenue in 1939/40) is due to the inclusion of agricultural taxes in this heading. Some of the other items included, e.g. excise duties, urban property tax and stamp duties have increased considerably in yield in the past decade. The following further analysis of revenue in 1939/40 under this heading is informative:—

Licences, Taxes, etc. 1939/40.

	LP.	% of total for this group
1) Licence fees of all kinds	83,976	8.6
2) Animal Tax	27,388	2.8
3) House and Land Tax	3,715	0.4
4) Tithe (in Beersheba and Hula Areas where this tax is still operative) and arrears	2,726	0.3
5) Rural Property Tax	103,697	10.6
6) Urban Property Tax	297,550	30.5
7) Stamp Duties	74,489	7.6
8) Tobacco Tax	8	—
9) Excise on matches	30,911	3.2
10) Excise on salt	12,725	1.3
11) Excise on tobacco	227,390	23.3
12) Excise on intoxicating liquors	68,354	7.0
13) Fines and forfeitures	42,941	4.4
TOTAL	975,870	100.0

75. The heading Fees of Court, etc., shows a considerable increase in relative importance in recent years (8 per cent. of total revenue in 1922/23; 9.4 per cent. in 1939/40). The following table shows, in respect of 1939/40, the relative importance of each of the several items coming under this heading:—

Fees of Court, etc., Receipts for Specific Services and Reimbursements, 1939/40.

	£P.	%
Fees—		
Fees of Court	119,254	18.8
Land Registration fees	143,235	22.6
Citrus fruit advertisement fees	5,940	0.9
Passport fees	16,741	2.7
Registration of companies, fees, etc.	7,224	1.1
Fruit inspection fees	17,741	2.8
Porterage charges (Haifa Harbour)	37,700	6.0
Other fees	96,845	15.3
Receipts—		
Warehouse rent	25,659	4.6
Palestine Archaeological Museum Endowment Fund	9,130	1.4
Sale of water to Jerusalem Municipality	52,952	8.4
Other receipts	24,954	3.9
Reimbursements— Total	75,733	12.0
TOTAL	639,856	100.0

CURRENCY.

76. Under the Turkish Regime many European currencies circulated in Palestine side by side with Turkish money. In commercial and trade circles, however, preference was given to French currency, particularly the gold Napoleon piece of 20 francs. During the Great War, devalued paper Turkish currency drove metal coins out of circulation, causing great hardship to the population. After the occupation of Palestine by the British forces, Egyptian currency, then in use by the troops, was proclaimed legal tender and this currency remained in use in the early years after the War. A Palestine Currency Board was set up in 1924 and a new Palestinian currency was first put into circulation on 1st November, 1927. In this volume monetary values relating to periods prior to that date have been converted from Egyptian pounds to Palestinian pounds. Early in 1928 the new Palestine currency was made the sole legal tender.

77. The Palestine pound, at parity with the pound sterling, is divided into 1000 mils, and is issued as a paper note. Other paper notes are of the following denominations:— 500 mils, £P.5, £P.10, £P.50 and £P.100. There is also a provision for a gold coin of £P.1 but it has not been put into circulation. In addition to the paper notes, the currency comprises silver coins of 50 and 100 mils each, nickel coins of 5, 10 and 20 mils each and bronze coins of 1 and 2 mils each.

78. The Palestine currency is issued and controlled by a Currency Board in London, represented in Palestine by the Currency Officer; the Board's agents are Messrs. Barclays Bank (D.C. & O.). According to the Currency Ordinance the Palestine Currency Board is obliged to exchange on demand sterling for Palestine Currency and vice versa. It may, however, invest its sterling funds in British Government Securities (or in such other securities which may be approved by the Secretary of State). Net profits from the currency fund remaining after

allowance has been made for reserves are paid annually to the Palestine Government as a contribution to the general revenue. In the years of its existence the Board has contributed to the Palestine Government a total of £P.910,000.

As the amount of currency in circulation at the 31st March, 1940, totalled £P.8,541,635, and the currency Reserve Fund amounted to £P.8.698,479. Total assets including investments, deposits, silver coins exceeded the total face value of the currency in circulation by £P.764,779 or 9 per cent. Statistics of the value of currency in circulation are shown in Tables 149 and 150.

BANKING.

Banking Statistics (*Tables* 151-155).

79. Commercial banking facilities are provided in Palestine by three main groups of financial institutions, namely, foreign banks (branches of large foreign banks), local banks and credit co-operative societies. In principle credit co-operative societies differ from the ordinary commercial banks, but in their main activity of accepting money deposits and granting credit they perform for their members the same service as commercial banks. The existence on the one hand of foreign banks of long standing and on the other hand of highly developed credit co-operative societies, provided small opportunity for the establishment of local banks in the first post war decade. In the "boom" years of 1933 to 1935, however, a large number of small banks come into existence. At the end of March, 1936, there were, besides the six foreign banks and some 100 credit co-operative societies, no fewer than 70 local banks. Many of the local banks were small institutions, with limited capital and reserves. The average capital and reserves of these 70 local banks was only £P.21,277 in March, 1936.

80. Banking legislation aiming at strengthening the capital position of the existing local banks and limiting the number of new small institutions came into effect in October, 1937. According to the Banking (Amendment and Further Provisions) Ordinance, 1937, no company can be registered to carry on banking business in Palestine unless its subscribed capital is not less than fifty thousand pounds, of which not less than twenty five thousand pounds is paid up. Existing local banks whose subscribed and paid up capital was less than the required amount were given a period of nine months, i.e. up to July, 1938, to raise their subscribed capital to a sum not less than twenty-five thousand pounds and their paid up capital to a sum not less than ten thousand pounds, and a period of two years, i.e. up to October, 1939, to raise their capital up to the minima* prescribed for new banks. As a result of the requirements regarding bank capital many smaller banks, unable to fulfill the provisions of the Ordinance, had to cease to carry on banking operations as defined by the Banking Ordinance. At the end of December, 1940, the number of local banks so operating had fallen to 29. (Certain credit co-operative societies** which had been converted into companies are also included in this figure).

81. Published banking statistics are extracted from monthly and half-yearly statements submitted by individual banks to the Treasurer under the Banking Ordinance, 1936. Mortgage banks are also required to furnish returns but their statistics are not published since only two mortgage banks come under the Ordinance and publication of totals for two concerns is contrary to the practice of the Office of Statistics. Credit co-operative societies are not required by Ordinance to submit monthly statements of their assets and liabilities but nearly all have agreed to do so on a voluntary basis at the request of the Registrar of Co-operative Societies. The number of regularly reporting credit societies at the end of December, 1940, was 85, 33 urban and 52 rural.

*) By the same Ordinance the minimum paid up capital of foreign banks was fixed at £. 100,000 or the equivalent thereof; while all banks are required to pay Government an annual fee of £P. 100.

**) One in August 1938, one in January, 1939 one in February 1939, and one in November 1940.

WEIGHTS AND MEASURES.

The metric system is followed by the Government, and its use regulated by Ordinance, but the local weights and measures are still commonly employed. Some of those generally used, with their equivalents in Metric and Britsh weights and measures, are as follows:—

(a) Length and Surface.

1 dra' or pic (cloth measure)	= 67.75 cm.	= 26.67 in.
1 dra' or pic (building and land measure)	= 75.80 cm.	= 29.84 in.
1 dunum* (Turkish) = 1600 sq. pics	= 919.3 sq.m.	= .22717 acres

(b) Weight.

i. *used in all Palestine.*

1 dram (dirhem)	= 3.205 grm.	= 44.459 grains
1 okka = 400 dirhems	= 1.282 kgm.	= 2.827 lbs.

ii. *used in Southern Palestine.*

1 oqia = 75 dirhems	= 0.240 kgm.	= 0.530 lbs.
1 rotl = 12 oqias	= 2.884 kgm.	= 6.359 lbs.
1 kantar = 100 rotls	= 288.400 kgm.	= 635.900 lbs.

iii. *used in Northern Palestine.*

1 oqia = $66\frac{2}{3}$ dirhems	= 0.214 kgm.	= 0.471 lbs.
1 rotl = 12 oqias	= 2.564 kgm.	= 5.653 lbs.
1 kantar = 100 rotls	= 256.400 kgm.	= 565.300 lbs.

* The metric dunum used by Government is equivalent to 1,000 sq. metres or one-tenth of a hectare.

GEOGRAPHICAL FEATURES.

Position:—Palestine lies between Latitude (North) 29° 30′ and 33° 15′ and between Longitude (East of Greenwich) 34° 15′ and 35° 40′.

Land and Water Area:—

DISTRICT	TOTAL AREA		LAND AREA		WATER AREA	
	Sq. Km.	Sq. Miles	Sq. Km.	Sq. Miles	Sq. Km.	Sq. Miles
Gaza-Beersheba	13,813	5,333	13,688	5,285	125	48
Lydda	1,205	465	1,205	465	—	—
Jerusalem	4,732	1,828	4,332	1,673	400	155
Samaria	3,271	1,263	3,271	1,263	—	—
Haifa	1,019	393	1,919	393	—	—
Galilee-Acre	2,969	1,147	2,790	1,078	179	69
Total	27,009	10,429	26,305	10,157	704	272

Mountains (*Height above mean sea level*):—

Jebel Jermaq	1,208 m. (3,963 ft.)	Mount Ebal	940 m. (3,084 ft.)
Jebel Heider	1,047 m. (3,435 ft.)	Mount Gerizim	881 m. (2,890 ft.)
Tel 'Asur	1,016 m. (3,333 ft.)	Mount of Olives	
Jebel 'Adathir	1,006 m. (3,301 ft.)	(Jebel et Tur)	826 m. (2,710 ft.)
		Mount Tabor	562 m. (1,844 ft.)

Lakes:—

	APPROXIMATE AREA.		APPROXIMATE LEVEL.
	Sq. Km.	Sq. Miles	
Lake Hula (Waters of Meiron)	14	5	70 m. (230 ft.) above m.s.l.
Lake of Tiberias (Sea of Galilee)	165	64	209 m. (686 ft.) below m.s.l.
Dead Sea (only half in Palestine)	1,050	405	392 m. (1286 ft.) below m.s.l.

Rivers:—Jordan, length from source to the Dead Sea 252 km. (157 miles)—consisting of 14 km. (9 miles) north of lake Hula, 5 km. (3 miles) through lake Hula, 18 km. (11 miles) from lake Hula to lake Tiberias, 21 km. (13 miles) through lake Tiberias, and 194 km. (121 miles) from lake Tiberias to the Dead Sea.

Yarmuk, length 40 km. (25 miles) of which only 17 km. (10 miles) in Palestine.

Nahal Qishon (Nahr el Muqatta), 13 km. (8 miles).

Nahar el 'Auja (Mei hay Yarqon), 26 km. (16 miles).

Harbours:—Haifa, Jaffa—Tel Aviv, Gaza and Acre.

Statistical Summary of the Progress of Palestine.

ITEMS		1926	1928	1930	1932	1934	1935	1936	1937	1938	1939	1940

*) The sub-district areas in 1922 and 1931 are taken from the Census of Palestine, 1931. The changes in area between 1922 and 1931 are mainly due to the rectification of frontier with Syria and Trans-Jordan, increasing the total land area, the land area of the Galilee-Acre District, and the areas of the Acre, Safad and Tiberias Sub-districts; on the other hand, the area of the Beisan Sub-district was reduced as a consequence of a rectification of frontier with Trans-Jordan.

†Revised land are (Source: Commissioner of Lands and Surveys).

Table 6 — Total Population of Palestine at the Censuses of 1922 and 1931, and Estimated Total Population as at 31st December in each of the Years 1932—39, by Religions.

* The census figure for this group indicates persons gainfully occupied in a variety of miscellaneous industries and occupations not included under other headings. The migration figures are dominated by the general labourers. These labourers will be, on absorption, distributed over many of the industries classified (under other heads), but cleary only a small proportion will be associated with the industries covered by this group of the census classification. A comparison of the figures of immigration with those of 1931 census would therefore be misleading. The distribution of the general labourers among the manufacturing and construction industries would raise the percentages given. For instance a number of labourers must have been absorbed into the building industry, a number that might be anything up to three times the immigration figure given for that industry.

*The "year of Crop" is the year in which the tobacco is planted. Thus the crop of 1935 represents tobacco planted in 1935 and registered in 1936.

†The cultivation of heisheh is permitted in the Beersheba district only and is uncontrolled. Crops of heisheh are therefore not registered.

No records of plantation were taken for the year 1925 as plantation for that year had commenced before the promulgation of the Tobacco Ordinance in May 1925. The total crop, including tobacco, tombac and heisheh for 1925, was 678,179 kilos

Part V (Contd.).

Table 53 — Area in Dunums under Citrus Plantations and Age of Trees, 1922—40.

(NOTE:— Citrus trees are considered to become fruit-bearing in the fourth year)

Part VI (Contd.).

Table 60 — Summary by Kind of Animals, 1934 and 1937.

Kind of Animal	1934 Number	1934 Total	1937 Number	1937 Total
Horses, Mules, Donkeys & Camels		131,653		149,332
Horses		16,355		20,053
Colts	756		1,220	
Fillies	1,047		1,544	
Stallions	5,185		5,587	
Mares	8,489		10,282	
Geldings	878		1,420	
Mules		7,481		8,989
Foals under 1 year	286		380	
Mules	7,195		8,609	
Donkeys		75,784		92,205
Foals, under 1 year:				
male	4,721		6,969	
female	8,000		10,849	
Stallions	25,078		29,164	
Mares	36,946		43,530	
Geldings	1,039		1,693	
Camels		32,033		28,085
Foals	1,895		22,369	
Male	24,998		3,951	
Female	5,140		1,765	
Cattle & Buffaloes		135,344		175,209
Cattle		130,804		169,145
Bulls castrated	29,416		29,756	
Bulls uncastrated	7,172		7,044	
Cows and heifers	63,886		97,375	
Calves, under 1 year:				
male	12,948		17,205	
female	17,382		17,765	
Buffaloes		4,540		6,064
Male	1,175		1,286	
Female	2,422		2,172	
Calves, under 1 year:				
male	396		1,072	
female	547		1,534	
Sheep and Goats		568,778		570,846
Sheep		188,267		209,422
Male castrated	561		2,220	
Male uncastrated	9,022		17,557	
Female	147,652		158,061	
Lambs under 1 year	31,032		31,584	
Goats		380,511		361,424
Male castrated	3,760		6,132	
Male uncastrated	13,710		17,906	
Female	304,513		283,278	
Kids under 1 year	58,528		54,108	
Poultry		1,510,518		2,660,092
Fowls (cocks, hens and chickens)	1,372,718		2,455,949	
Ducks	6,240		12,155	
Geese	3,377		6,034	
Turkeys	4,928		6,382	
Pigeons	123,255		179,572	

Table 61 — Animals Slaughtered in Local Authorities' Areas, 1933—1940.

X. FOREIGN TRADE.

Table 69 — Value of Imports, Exports and Re-exports, by Main Classes, Calendar Years 1926—1940.

NOTE. — Prior to 1937, imports under classes I, II and III did not include figures for imports by institutions exempted from import duty. Imports by the said institutions during the said period were entered under class IV, "Miscellaneous and unclassified". Imports under classes I, II and III during 1937 included imports by all institutions exempted from import duty, while imports under the said classes during 1938—1940 included imports by the said institutions except Military and N. A. A. F. I. stores. Class IV in 1937—1940 comprises only living animals not for food.

Grand Total			13,979,023		15,903,666		11,356,963 [p]		14,632,822 [p]		11,035,454 [p]

(l) In 1937—1940 Class IV comprises only living animals not for food.
(m) Chemical fertilizers and used personal effects previous to 1937 fell in Class IV, while in 1937—1940 fell in Class III. The 1937—1940 figures are given here only for purposes of comparison.
(o) The figures for 1937—1939 are given only for purposes of comparison with earlier years. Imports as Government Stores and Iraq Petroleum Company Stores during 1937—1940 were distributed under the appropriate items of the trade statistics. Imports as Military and N. A. A. F. I. Stores, however, were included under the appropriate items of the 1937 imptors statistics, but were excluded from the 1938—1940 imports statistics.
(p) Imports during 1938–1940 exclude Military and N. A. A. F. I. stores. The 1940 imports statistics, moreover, exclude petroleum products and certain other commodities.
(x) Withheld from publication.

Part X (Contd.).

Part X (Contd.).

Table 75 — Value of Imports of Merchandise for Consumption, by Countries of Consignment, 1926—1933, and by Countries of Origin, 1934—1940.

Note.—The users of this table are cautioned that imports from any particular country during any of the years in which imports statistics are given by countries of consignment, viz. 1926—1933 are not comparable with imports from the same country during any of the years in which the imports statistics are given by countries of origin, viz. 1934—1940. Imports from the United Kingdom and Egypt show striking examples of this incomparability. A considerable part of goods made in England and imported into Palestine during 1926—1933 were consigned from Egypt and therefore were accredited to this latter country.

Imports statistics, by countries, included figures for Military and N.A.A.F.I. stores up to the end of 1937 but excluded figures for these stores as from beginning of 1938. The 1940 statistics, moreover, exclude petroleum products and certain other commodities.

	Gaza Aerodrome	*	*	*	*	*	590	1,209
	Tiberias Seaplane Station	30	*	*	*	*	552	58
	TOTAL	*	1,912	2,229	*	*	12,336	10,417

* No information available.
(1) Number of landings, including aircraft arriving from an airport in Palestine and excluding trial flights.
(2) Passport control records. Passengers arrived at or left from Tel Aviv passed the passport control at Haifa Airport or at Lydda Airport.
(3) March to December.
(4) Operated as an airport for civil aviation until the end of March, 1939.

e) POSTAL STATISTICS OF PALESTINE.

Part XII (Contd.).

Table 106 — Prevailing Daily Rates of Wages in Agricultural Employment, 1940.

Occupation	Jewish Labour			Arab Labour		
	Men	Women	Children	Men	Women	Children
	mils	mils	mils	mils	mils	mils
Wage Rates paid during the Summer Season						
1. Ploughing (cereal land)	200-250	—	—	80-100	—	—
2. Tree planting, permanent workers in orange groves	175-250	—	—	80-120	—	—
3. Pruning	150-200	150-175	100-150	80-100	—	—
4. Tobacco planting	200	150	—	100	60	—
5. General labourers: (a) cereal land	160-200	150-175	—	70-120	50-80	40-60
(b) citrus belt	150-200	150-175	—	70-110	50-80	40-60
Wage Rates paid during the Orange Picking Season (recorded in February, 1940)						
6. Orange picking	150-200	130-175	80-120	80-100	—	—
7. Porterage: (a) baskets	150-200	150	—	80-100	40-70	40-50
(b) cases	250	—	—	100-120	—	—
8. Orange sorting: 1st class	—	250-350	—	150-180	—	—
2nd class	—	175-250	120-175	120-150	—	—
9. Orange wrapping	150-250	150-250	120-200	100-200	—	—
10. Orange packing: Packer, Chief packer	500-1000	—	—	200-300	—	—
Assistant packer	250-500	—	—		—	—

The rates shown in respect of Jewish labour in the citrus belt are based on eight hours' work. The hours of work on cereal land vary according to season.

Part **XII** (Contd.).

Table 107 — Union Scale of Daily Wage Rates, based on Eight Hours' Work a Day, Prevailing in Manufacturing Industries and Construction in Jerusalem, Tel Aviv and Haifa in 1940.

(Communicated by the General Federation of Jewish Labour in Palestine).

Industry and Occupation		Jerusalem mils	Tel Aviv mils	Haifa mils
I.—Stone Quarries and Manufacture of Building Materials

roads		200—250	350—400	—

Note:—The changes in union wage rates between March and September, 1940, were insignificant; in the last quarter of 1940 cost of living allowances ranging from ten to twenty per cent o the basic rates were granted in a large number of industrial undertakings. The rates shown in this table relate to the first nine months of 1940.

Part XII (Contd.).

Table 108 — Average Daily Wage Rates in Manufacturing Industry and Construction, 1938—1940.

NOTE.—The figures contained in the following table were extracted from the returns supplied by individual employers in the form of frequency tables with a class interval of 50 mils. It is, therefore, not improbable that in some cases the true average rates are slightly higher or slightly lower than shown in the table. These deviations cannot, however, exceed 25 mils.

Oiler		—	—	100—299	161
Guard		—	—	250—399	282
Pointsman		—	—	150—249	182
Rivetter and mate		—	—	200—399	287
Signalman		—	—	200—299	230
Shunter		—	—	200—299	233

(a) Minimum and maximum rates of wages according to scale, not including exceptionally low or high rates.
(b) The predominant daily rates of wages ranged between 250 and 375 mils.
(c) The rates shown relate to one district only.
(d) The average wage rate affected by the presence of a number of temporary workers.

NOTE.—The daily hours of work in construction vary from eight to nine. The wage rates of the workers on the Railways are based on eight hours' work a day.

It should be borne in mind that the occupations and skill of the workers employed in Public Works vary according to the nature of the work in progress at the time of the inquiry. Occupations insufficiently represented in the returns have not been included.

Table 110 — Prevailing Daily Hours of Work, 1940.

Industry	Jewish labour	Arab labour
Stone quarries	8	8—9
Manufacture of building materials	8	8—10
Wood works	8	9—10
Metal works	8	(x)
Printing and stationery	8	8—9
Textiles	8	(x)
Tobacco and cigarettes	8	8
Bakeries	8	9—10
Oil and soap industry	8	8—9
Shoe manufacture	8	(x)
Manufacture of clothes	8	(x)
Building	8	8—9

(x) No information available.

1936—37	373	2,070	22,686	24,602	47,288
1937—38	395	2,206	23,952	25,968	49,920
1938—39	406	2,374	25,725	27,609	53,334
1939—40	419	2,517	27,697	29,203	56,900

Note:—(a) The figures for the school years 1920-1925 have been supplied by the Jewish Department of Education. The distribution of the pupils by sex is not given.

(b) The average number of pupils per teacher is not calculated, as many of the teachers are part-time only.

a) Durrah and maize.
b) Including also damask and gobelin.
c) Imports of flour are expressed in terms of wheat at a ratio 80 : 100.
d) Including imports from Trans-Jordan
*) Figures of Kerosene have not been published.

Part XVIII (Contd.).

Table 201 — Categories of Lands under the Rural Property Tax Ordinance, No. 1 of 1935.

NOTES:- Table describes the total area of land which comes under the Rural Property Tax Ordinance, No. 1 of 1935, i.e. the whole of Palestine with the exception of Beersheba Sub-District, the Hula Concession Area in the Safad Sub-District, and the urban areas. The categories of land defined by the Ordinance are as shown in the following Table: —

Category	Description of land	Rate of Tax	Area as at 1.4.38
		Mils per dunum	Dunums
1	Citrus (excluding Acre Sub-District)	400	267,369
2	Citrus (Acre Sub-District)	40	8,346
3	Bananas	560	3,947
4	Village built-on-area or reserved therefor	160	76,399
5	1st Grade irrigated land and 1st Grade fruit plantation	40	4,490
6	2nd Grade irrigated land and 2nd Grade fruit plantation.	35	220,966
7	3rd Grade irrigated land and 3rd Grade fruit plantation.	30	594,149
8	1st Grade ground crop land, 4th Grade irrigated land and 4th Grade fruit plantation.	25	315,559
9	2nd Grade ground crop land, 5th Grade irrigated land and 5th Grade fruit plantation.	20	222,701
10	3rd Grade ground crop land, 6th Grade irrigated land and 6th Grade fruit plantation.	18	845,037
11	4th Grade ground crop land, 7th Grade irrigated land and 7th Grade fruit plantation.	15	736,924
12	5th Grade ground crop land, 8th Grade irrigated land and 8th Grade fruit plantation.	12	977,713
13	6th Grade ground crop land, 9th Grade irrigated land and 9th Grade fruit plantation.	8	1,878,768
14	7th Grade ground crop land, 10th Grade irrigated land.	Nil.	744,244
15	8th Grade ground crop land.	Nil.	214,970
16	16A Forests planted and indigenous and uncultivated land.		6,384,760
	16B Roads, Railways, Rivers and Lakes.	Nil.	84,549
	TOTAL	—	13,580,891

1 metric dunum = 1,000 square metres.

Part XVIII (Contd.).

Table 202 — Number of Villages in each Sub-district of Palestine, (not including Beersheba Sub-district), and Area of Village land in Metric Dunums, according to Ownership by Jews and Others, and divided into Classes (according to Groups of Rural Property Tax Categories), 1938—1939.

‡ The value of land includes the value of improvements, e. g., buildings, etc.

(+) and — signs are to be interpreted in the sense that they imply net gains and losses, respectively, in land and money.

§ The balance of land sold by Non-Jews and retained by Jews from October, 1940 to December, 1940, was 792,689 dunums, valued at £P. 8,921,242.

‖ This land in possession of Jews prior to the date of the occupation is estimated at about 650,000 dunums.

Net Area and Money Acquired and Relinquished During Each Period.*

XIX. CENSUS OF JEWISH INDUSTRY AND HANDICRAFTS, 1937.

(Source: Jewish Agency for Palestine).

NOTE :— The establishments have been divided into two classes: Handicrafts and Industry. Under the former are included artisan's shops which cater for the individual customer and are engaged in the so called neighbourhood and hand trades, repairs and service. As a rule they employ, together with the owner less than 5 persons, have an output of under £P.1,000 per annum and a capital considerably less than £P.1,000; in many of these, little or no power machinery is used. All the other establishmrnts belong to the second class.

The data relating to costs and output contain two sets of summaries: (a) actuals for 1936 or the 12 months nearest to the census day, (b) calculation for full 12 months of 1936, the later consisting of actuals plus adjustmehts in respect of the new factories established during 19 .6, or the old ones which were closed for several months of the year on account of the disturbances.

Man-days	101.7	102.5	104.1	109.6	91.3	71.5	95.4
Wages	100.5	98.2	101.1	107.1	95.6	79.7	94.5
Value of output ...	158.7	155.3	141.3	152.0	185.6	128.5	162.0
Physical volume	104.0	104.4	101.8	114.4	96.1		

NOTE: The index numbers for the whole industry were weighted by the following weights for each of the twelve groups taken from the census of the Jewish industry 1937.

workers, man-days, wages } by the number of workers

value of output, Physical volume } by the net value added.

Basis: Average October 1938—September 1939 = 100.

ALPHABETICAL INDEX.

PREFACE.

The sixth issue of the official Statistical Abstract of Palestine follows the same pattern as its predecessors.

The material in the tables has been brought up to date by the inclusion of statistics for the calendar year 1941. In some instances, where the publication of later returns has been discontinued, notably in respect of Civil Aviation, Shipping and certain trade commodities, the figures are given only up to the end of 1939.

Thanks are due to the business firms and other non-official bodies for collaboration in supplying the statistical returns from which many of the tables have been complied and to officers of this office and of other Government Departments for the compilation of the ables.

Indebtedness to the Jewish Agency for permission to publish some interesting statistical tables compiled by the Statistical Department and the Economic Research Institute of the Agency is gratefully acknowledged.

Mr. Faiz Khuri of this Office has been responsible for the editing of this abstract, in addition to his other duties.

G. E. WOOD
Government Statistician.

Office of Statistics,
Jerusalem.

December, 1942.

INTRODUCTION.

1. The comments contained in the following pages are designed to assist the reader in the interpretation of the principal statistical tables published in this Abstract. A short descriptive statement is given under each heading together with, where appropriate, definitions of terms and other explanatory notes necessary towards a proper understanding of the import of the statistical material included in the body of the Abstract. Only brief comment on each subject is possible within the compass of these notes; and the statistical tables themselves are of necessity published in summary form only. For greater statistical detail in respect of any particular class of material the reader is referred to the more specialized publications of the Office of Statistics, to Departmental Reports, the Blue Book and other cognate sources. A list of publications of the Office of Statistics is given on the back cover.

2. Methods of compilation of statistics compiled in the Office of Statistics are given in certain of the stencilled statistical bulletins regularly issued by that Office. Since it has not yet been possible to publish under one cover an adequate description of methods and caveats necessary towards the proper interpretation of these statistics the following references are cited as implementing the necessarily brief notes on methodology contained in the following pages:—

Vital Statistics Bulletin Nos. 1/1936 (1931-1935), 1/1939.

Trade Bulletin Nos. 1/1937, 1/1939.

Banking Statistics Bulletin Nos. 1/1937, 2/1937, 6/1937, 8/1937, 3/1938, 14/1938, 1/1939.

Security Prices Bulletin, No. 1/1937.

Wholesale Prices Bulletin, No. 1/1936, 2/1936.

Retail Prices, Special Bulletin, September, 1940.

Employment and Pay-Rolls Bulletin, Nos. 1/1938 and 1938 Annual Bulletin.

Wage Rates Statistics Bulletin, Nos. 1, 4 and 7.

Labour Disputes Bulletin, Nos. 1 and 9.

Real Wages Bulletin, Nos. 1 and 2.

Industrial Accidents Bulletin, No. 1.

Judicial Statistics Bulletin, Nos. 1/1937 and 1/1939.

Bulletins on special subjects:—

Annual Bulletin: Reclassification of Palestinian Trade on the basis of the International Minimum List of Commodities.

Special Bulletin, No. 1. Trade between Palestine and Syria, 1927-1937.

Special Bulletin, No. 2. Seasonal fluctuations in the consumption of electric-power.

Special Bulletin, No. 3. The fertility of marriage in Palestine.

SITUATION AND BOUNDARIES.

3. Palestine lies on the western edge of the continent of Asia, at the eastern extrimity of the Mediterranean Sea, between latitude 20°30' and 33°15' N. and longtitude 34°40' and 35°40' E. It is bounded by the Lebanon of the French Mandatory territory of Syria on the north. This boundary was determined by the Franko—British Convention of December 23, 1920 (Cmd. 1195), and an Agreement of Delimitation between H.M. Government and the French Government was published as Cmd. 1910 of 1923. According to the Agreement the frontier at Samakh, belonging to Palestine, permits of the joint use of the railway station by both countries. The territory on the east is bounded by Transjordan (this boundary was defined by an Order of the High Commissioner on September 1, 1933) and on the south by the Egyptian province of Sinai.

PHYSICAL FEATURES.

4. The principal river is the Jordan. It rises near Banyas at a height of about 914 metres (3,000 ft.) above sea level, and enters Lake Hula (Waters of Merom) 70 metres (229 ft.) above sea level. Between Lake Hula and Lake Tiberias (Sea of Galilee) the river drops 279 metres (915 ft.) in a distance of 18 km. (11 miles)

and becomes a turbulent stream. Lake Tiberias is 209 metres (696 ft.) below sea level and is liable to sudden storms. Between Lake Tiberias and the Dead Sea the Jordan falls 180 metres (591 ft.). The largest lake is the Dead Sea (only half of which is in Palestine). the area being 1,050 sq. km. (405 square miles), and is 392 metres (1,286 ft.) below sea level. It is 82 km. (51 miles) long and 17 km. (10½ miles) in breadth. Its maximum depth is 399 metres (1,310 ft.). It receives the waters of the Jordan as well as of 6 other rivers and has no outlet, the surplus being carried off by evaporation. The water contains an extraordinarily high concentration of mineral substances. The other principal rivers of Palestine are the Yarmuq, Auja and Qishon. The highest mountain peak is Jebel Jarmaq, 1,208 metres (3,963 ft.) above sea level, situated in the Safad sub-district.

CLIMATE.

5. Palestine, situated between Mediterranean and desert, has a transitory climate between the Mediterranean and the desert type, similar to that of lower Egypt but modified by the hills and valleys of the country.

The summer is hot but made comfortable in most parts of the country by daily refreshing westerly winds from the Mediterranean. The transitory seasons are characterized by occasional dry and very hot weather, often combined with easterly winds, which is very trying. The winter is the rainy season lasting from October till April approximately. Between December and February is the time of maximal rainfall. The rainfall is combined with the passage of westerly depressions with the effect that rainy days with cold and wet weather interchange with bright warm days. The annual rainfall ranges widely throughout the country and in the different years, the long years' average for Jerusalem being 600 mms.

6. Palestine can be divided into four climatic regions —

(i) *The Coastal Plain.* Warm and moist in summer, mild in winter and tempered by westerly winds from the Mediterranean. Relatively small daily and annual range of temperature. Plenty rainfall.

(ii) *The Hills.* Cooler and dryer in summer, cold in winter, especially owing to the penetrating cold winds, larger daily and annual range of temperature. Plentiful rainfall.

(iii) *The Jordan Valley.* Hot and dry, without tempering west winds, in summer. Moderate in temperature and humidity in winter. Large daily and annual range of temperature. Scarce rainfall.

(iv) *The Negev.* The desert to the South from Beersheba to Aqaba. Hot and dry in summer, cold and dry in winter. Large daily and annual range of temperature. Poor rainfall.

AREA AND ADMINISTRATIVE DISTRICTS.

7. The total land area of Palestine is estimated at 26.305 square kilometres, or 10.157 square miles; in addition there is an inland water area of 704 square kilometres, or 272 square miles, comprising Lake Hula, Lake Tiberias (the Sea of Galilee) and the Dead Sea (half of which is taken as belonging to Palestine); so that the total area of the country is 27,009 square kilometres or 10,429 square miles. There is a certain lack of precision about these figures, owing to the uncertainty of the Eastern frontier with Trans-Jordan. This boundary is defined as the centre of the Wadi Araba, from a point west of Aqqaba to the Dead Sea, and thence along the Jordan and the Yarmuk rivers until the Syrian frontier is reached. A trigonometric survey of the Wadi Araba has not yet been attempted, so that the exact centre line of the valley has yet to be determined, and moreover, the course of the Jordan is subject to frequent changes.

8. For administrative purposes Palestine is divided into six districts. From south to north these districts are (i) Gaza—Beersheba District, with Gaza as its centre; (ii) Lydda District, with Jaffa—Tel-Aviv as its centre; (iii) Jerusalem District; (iv) Samaria District, with Nablus as its centre; (v) Haifa District; and (vi) Galilee—Acre District, with Nazareth as its centre. There are eighteen Sub-district each of which takes its name from its central town. The grouping of the

Sub-districts into Districts has been changed from time to time but only very small changes have been made in the Sub-district boundaries.

9. The Sub-districts are purely administrative divisions, and for the most part do not correspond with any geographical or ethnographical sections, Geographically, Palestine can be divided into seven district regions as follows:—

(a) The Maritime Plain, extending north from the Egyptian frontier, varying in width but generally narrowing towards the north, and terminating at Mount Carmel, just south of Haifa. The northern section of this plain is often called the Plain of Sharon.

(b) The Coastal Plain of Acre, extending from Carmel north to the promontory of Ras en Naqura at the Syrian frontier.

(c) A broad valley runnnig south-east from Haifa to the Jordan Valley, and dividing the hills of Palestine into two distinct groups. The western portion of this valley is the triangular Plain of Ezdraelon (Marj Ibn 'Amir), which communicates with the Coastal Plain of Acre through the narrow gap of the River Qishon. East of 'Affula the valley again narrows and falls towards the Jordan Valley at Beisan, this section being known as the Valley of Jezreel.

(d) The central range, south of Esdraelon, comprising the hills of Judea and Samaria. This is the "backbone" of Palestine and extends from Hebron in the south past Jerusalem and Nablus and falls away to Esdraelon and Jezreel. The south-west flank of the central range, comprising the coastal slopes in the Hebron Sub-District, is known as the Shephelah. The south-east portion of the Judaean hills, falling away to the Dead Sea, is described as the Wilderness of Judaea. A long spur of the Samaria hills extends north-west to the sea at Haifa forming Mount Carmel.

(e) The hills of Galilee, which comprise the whole of the north of Palestine with the exception of the narrow Plain of Acre and the Jordan Valley.

(f) The Jordan Valley, extending from the Syrian frontier in the north to the Dead Sea. The valley north of lake Hula is wide, flat and marshy, and is often considered separately as the Hula Basin.

(g) The district of Beersheba, an immense triangle with its apex at the gulf of 'Aqqaba, which contains nearly half the land of Palstine. It is largely desert and is only sparsely populated.

10. The average density of population over the whole of Palestine at the end of 1941 was estimated to be 60.3 persons per square kilometre. If the sub-district of Beersheba is omitted, the remainder of the country has a population of 117.1 persons per square kilometre.

GOVERNMENT AND ADMINISTRATION.

11. Palestine, which formed part of the Turkish province of Syria, was conquered during the World War by British troops under General the late Field-Marshal Lord Allenby. Jerusalem, which surrendered on December 9, 1917, had been in Moslem hands since 637 A.D. with a short interval after conquest by the Crusaders. The country remained under British Military Administration until July, 1920, when a new constitution was promulgated a Civil Administration was set up, headed by a High Commissioner, who is appointed by H.M. the King in the United Kingdom, and is also Commander-in-Chief.

High Commissioner and Commander-in-Chief.—Sir Harold Alfred MacMichael, G.C.M.G., D.S.O. (assumed office March, 1938).

Chief Secretary.—J. S. Macpherson, C.M.G. (appointed May 12, 1939).

12. The country is administered by Great Britain under a Mandate, which was confirmed by the Council of the League of Nations on July 24, 1922, and came officially into force on September 29, 1923. This embodies the Balfour Declaration of November 2 1917. to the effect that "His Majesty's Government view with favour the establishment in Palestine of a national home for the Jewish people, and will use their best endeavours to facilitate the achievement of that object, it being clearly understood that nothing shall be done which may prejudice the civil and religious rights of existing non-Jewish communities in Palestine, or the rights

and political status enjoyed by Jews in any other country." This Declaration was endorsed on August 10, 1920, by the principal Allied Powers in the Treaty of Sevres. The latest statement of policy is contained in the White Paper issued in 1939 (Com. 6019).

13. Under the Religious Communities Ordinance 1926, Regulations were issued by Government for the organization of the Jewish community and its recognition as such by Government. It enjoys autonomy for its internal affairs, cultural and communal, and may levy taxes, though this is restricted. The principal Jewish religious authority is the Rabbinical Council vested with jurisdiction in matters of personal status. The lay organs are an Elected Assembly, to consider the budget presented by Council and impose rates and fees on the community. The General Council (Va'ad Leumi) administers the affairs of the community according to the resolutions of the Assembly and represents the Jewish community in its relations with Government. It maintains a Hebrew Education system and controls certain Jewish health services. There are also local committees set up where not less than 30 Jews live.

The Jewish Agency for Palestine, consisting of Zionists and non-Zionists, is recognized by the British and Palestine Governments as an agency for the upbuilding of the Jewish National Home. It supervises Jewish immigration.

14. Moslem religious affairs are controlled by the Moslem Supreme Council, which is also responsible for the Moslem Waqfs (religious endowments) and Sharia Courts.

15. In 1941 there were 24 municipalities. Election to Municipal Councils is regulated by the Municipal Corporations Ordinance 1934. The Municipal Corporations are responsible for the carrying out of the general requirements and may do so independently since local autonomy is encouraged, and much has been done by them in town planning, construction and maintenance of streets, drainage, etc. They are also responsible for their own finances, the annual budget being subject to approval by the District Commissioners. In rural areas local affairs are administered by local councils. Taxes cannot be levied and loans raised without the approval of the High Commissioner. Bye-laws are issued with the approval of the District Commissioner. Grants-in-aid are set aside by Government as contributions towards the cost of executing major schemes.

16. The official languages of the country are English, Arabic and Hebrew. It is of interest to note that 60 languages were recorded as being the habitual language in use in the Census of 1931.

DEMOGRAPHY.

Population.

17. Prior to the Great War (1914-1918) the present territory of Palestine was administered as a part of the Turkish Empire. From time to time the Turkish authorities made attempts to enumerate the population, but there was no attempt to table the material and publish it in the manner of a modern census. Between the years 1917 and 1922, the British administration compiled figures of population based on estimates of all villages and towns. The first census of Palestine was undertaken in October, 1922, the population being 752,048, excluding members of H.M. Forces, and the published results give a complete picture of the territorial and religious groupings of the people. A second census was taken in November, 1931, in which more detailed information was sought. The report of this census contains a wealth of descriptive material in addition to the very extensive tables. The population is classified by religions into the four main groups; Moslems, Jews, Christians and Others. The religious division is traditionally the most important one in Palestine. The religious communities have preserved their identity and have exercised a continuous jurisdiction over their members, even though the political institutions of the country have undergone great changes.

Side by side with the religious division of the population is a second broad division into the three groups; Arabs, Jews, and Others. This division is a political one, and one which the course of events since the Great War has tended to emphasize. In this political division, the Jews are practically synonymous with the members of the Jewish religious community. The Arabs constitute the great bulk, though by no means all, of the Arabic-speaking inhabitants of Palestine.

18. Estimates of population in the years since the census of 1931 have been prepared by adding the recorded natural increase and the recorded excess of arrivals over departures to the census figures. Since members of His Majesty's Forces are not recorded on arrival or on departure, and since statistics of births and deaths among the nomadic Beduin are only fragmentary, these two groups are excluded from the 'settled' population on which birth and death rates are based. In order to arrive at a figure of 'total' population the number of Beduin enumerated in 1931 is added to the settled population; changes in the Beduin population being of unknown magnitude, no changes in this figure, 66,553, are made. His Majesty's Forces are excluded from all estimates, both 'settled' and 'total'. For the years since 1931 a 'mean' population has been introduced, a weighted average of the five populations spaced at quarterly intervals from the end of the preceding year to the end of the year in question. The effect of temporary seasonal migrations is thus minimized.

19. Including the Beduin tribes as enumerated at the 1931 census, but not including members of His Majesty's Forces, the population of Palestine at the end of the year 1941 is estimated to have numbered 1,585,500. The relative proportions in the estimated population at the end of 1941 were: Moslems 61.4 per cent., Jews 29.7 per cent., and Christians 7.9 per cent. Others numbered 12,881 the great majority of whom are members of the Druze community and live in the hills of Carmel and Galilee.

The estimated populations of the principal towns (1941) were Jerusalem 141,100; Tel Aviv (municipal area, all Jews) 140,700; Haifa 114,400; Jaffa 85,300; Gaza 27,400; Hebron 21,000; Nablus 21,900; Petah Tiqva 17,400; Lydda 15,700; Ramle 13,600; Nazareth 11,300; Tiberias 11,000; Safad 11,000; Acre 9,800; Bethlehem 8,200.

Births and Deaths.

20. Registration of births and deaths was made compulsory in Palestine by the Public Health Ordinance of 1920. The Registers are kept at the District Offices of the Department of Health. Registration is effected on the receipt of a completed form of notification, supplies of these forms being distributed to all doctors and midwives and in rural areas to the mukhtars (heads) of the villages. In towns the notification of births is effected almost entirely by doctors and licensed midwives (dayas), and the notification of deaths by doctors. In villages information of the occurrence of births is given by the parent or registered daya (midwife) to the mukhtar who completes the form for transmission to the Health Office of the District. Similarly, on the occurence of a death the mukhtar is informed by the relatives or person present at the time of death, and the particulars are recorded by him for notification to the Health Office. In order to secure accuracy of records in village areas mukhtars receive payment for each notification of a birth or death made by them. In rural areas it is not possible as yet to obtain certification by medical practitioners of the cause of death. As the records of births and deaths among Beduin tribes are only fragmentary, they have been excluded from all statistics.

21. There has been a general decline in the birth rate since it attained a peak value of 50.24 per 1,000 in 1926. The decline has been noted in each of the three principal communities, but essential differences between the community rates have persisted. The Moslem rate is consistently the highest, having varied between 46.42 (in 1939) and 55.48 (in 1926). The Jewish rate is consistently the lowest, varying from 20.67 (in 1941) to 38.16 (in 1924). The Christian rate is intermediate between the Moslem and Jewish rates and has varied from 29.06 (in 1941) to 40.12 (in 1924). It has held an intermediate position between the Moslem and Jewish rates in every year since 1923.

22. The decline in the Jewish birth rate has been due in the main to the existence of an essentially different birth rate between the older Jewish population and the immigrant Jewish population. As immigration has continued, the relative importance of the immigrant population has increased, and their generally lower birth rate has tended to decrease the rate for all Jews. In the same way the increasing proportion of Jews in the total population has been a factor in depressing the general birth rate, quite apart from the effect of the decline within each community.

23. Despite the decline, all the rates are still high compared with those of other countries. The Jewish rate, the lowest, was higher in the decade from 1926 to 1935

than that of any European country except Roumania and despite the fall in the most recent years it is still surpassed in Europe only by the rates of Roumania and Portugal. The high Moslem rate was, until recently, the highest rate appearing in any published vital statistics.

24. Palestine in recent years has shown a falling death rate, from the highest figure of 26.88 per 1,000 (recorded in 1928), to the figure of 18.60 (in 1935), rates in 1936, 1938, 1939 and 1941 being even lower. In the five years 1931-35 the rate averaged 20.9 per 1,000. This was higher than for any European country, with the single exception of Malta, but it was exceeded by a number of American and Asiatic countries, as well as by Egypt. In 1935 the rate was below that of Roumania. The fall in the death rate in Palestine has been chiefly due to the increasing proportion of the Jewish population, which has consistently shown a much lower death rate than that of other communities.

25. The Moslem death rate, however, has also shown a definite decline. In the years 1923-1929 it ranged between 26.39 and 31.74 per 1,000, while in the years since 1934 it has never attained 25 per 1,000. There is evidence of a three-year cycle in the Moslem death rate. The years 1925, 1928, 1931, 1934, 1937 and 1940 showed, with only one exception, higher death rates than the years immediately preceding and following them. The series of these high values, 29.25, 31.74, 26.21, 26.70, 24.86, 24.74, indicates a small downward trend. The Jewish death rate has never exceeded 15 per 1,000 and since 1929 it has been below 10 per 1,000, reaching its lowest point, 7.57 per 1,000, in 1939. Rates below 10 per 1,000 were recorded in the five year period 1931-1935 only in Holland, Australia, New Zealand, Canada, South Africa and Hawaii, and such rates can only be maintained while the age structure is such that very young children and old people, the sections of the population in which the force of mortality is greatest, are relatively few. The lowering of the Jewish death rate in Palestine has been largely due to the immigration of large numbers of people in the early adult period of life when the risk of dying is low, and a considerable part of the lowering of the general death rate of Palestine has followed in consequence.

26. The infant mortality rates for the different communities in all years since 1922 are shown in Table 19. All communities have shown a downward trend but the most marked has been in the Jewish community. The Jewish rate was 126.03 per 1,000 live births in 1923; it remained above one hundred until 1928. In that year it fell below one hundred and has since further declined, being below 60 in the last five years. The lowest rate recorded in any country in 1937 was 31 per 1,000 in New Zealand. The only other rates below 60 in that year were Australia (38), Netherlands (38), Sweden (46), Switzerland (47), Latvia (56) and England and Wales (58). The Jewish community therefore experiences a rate that will compare favourably with that of the most advanced countries of Europe. The Christian infant mortality rate, occupying as always an intermediate position between the Moslem and Jewish rates, stood at 86.93 per 1,000 live births in 1941. The Moslem rate was over 200 per 1,000 on four occasions in the post-war period, the last being in 1929. Since that date it has risen to a peak at three-yearly intervals, the figures being 186.50 in 1931, 175.34 in 1934, 179.31 in 1937 and 147.14 in 1940. It was below 150 in 1935—for the first time—and has remained below 150 in every subsequent year except 1937.

27. The distribution of deaths according to age and religious community in the years since 1930 is shown in Table 21. In order to draw any precise conclusion these deaths at each age require to be related to the population at each age among which they occur. In the absence of recent estimates of population by age only very obvious features can be examined. There is a great difference between the communities in deaths at ages over one month. This difference continues at all ages up to about 15 but it is most striking in the second, third, and fourth years of life. A feature of Palestine mortality statistics is the great loss of life in these early years. In the most advanced countries the loss of life in the first month has proved the most difficult to reduce, but at all subsequent ages of early childhood the loss of life has been reduced substantially, and it frequently happens that the total number of deaths aged 1—4 years (inclusive), falls below that of deaths in the first month. But in Palestine, in 1941, the losses at those ages, totalling 6,660 were almost four times as great as the losses aged under one month. The Moslem community is the greatest sufferer in this respect, the Jewish community showing an experience more in keeping with that of European countries.

Marriages and Divorces.

28. The celebration of marriages in Palestine, together with the granting of divorces is governed by the law of the religious community to which the parties belong. Every marriage celebrated and every divorce granted must be registered by the religious authority and copies of all such registrations must be sent to the District Commissioner of the District. Marriage of British subjects is conducted under the Foreign Marriages Act, the District Commissioners being the Marriage Officers. In 1941 the number of marriages celebrated was 18,560; 11,484 by Moslems, 6,482 by Jews, 492 by Christians and 102 by Other religions.

29. The number of divorces granted was 2,951; 1,353 to Moslems, 1,597 to Jews and 1 to Christians. The high proportion of Jewish divorce is due to the practice of 'mariage de convenance' enabling girls to enter Palestine in surplus of the approved quota. Regulations have been enforced to stop this form of illegal immigration.

*Migration.**

30. The great extent of addition to the population by immigration has been the outstanding feature of the demography of Palestine under the British mandate. In the years immediately following the Great War, there was a considerable influx of returning emigrants from neighbouring states; but by 1922 the main stream of immigration consisted of new residents, the overwhelming majority of whom were Jewish. Registered Jewish immigrants in the period 1920-41 numbered 314,866.

31. Annual statistics of migration are given, in summary form, in Tables 25-32, (Pages 19-25). The following brief comments will assist in the interpretation of the statistics:

(a) The summary of arrivals and departures (Table 25) affords an accounting of the effect of migration movements on the *de facto* population. The net effect of migration movements in any year on the permanent population may be quite different in amount (or even in sign) from the balance shown in this table since —

(i) Travellers normally form a considerable proportion of arrivals and departures in any year, as would be expected in view of the unique historic associations of Palestine.

(ii) Residents departing from year to year may include a varying proportion of persons who do not intend to return.

(b) For the year 1935 and since, a detailed classification of arrivals and departures has been made, which *inter alia* provides for distinction between residents departing for a period of one year or less and residents departing for more than one year. This permits of the numerical assessment of the effect of migration on the *de jure* population, if residents departing for more than one year are regarded as emigrants**. The balance between immigrants and emigrants so defined compares with the excess of total arrivals over departures as follows:—

	Immigrants less Emigrants	*Excess of arrivals*
1935	58,935	65,867
1936	28,209	22,052
1937	9,835	5,237
1938	11,604	—126¶
1939	13,564	32,589 a)
1940	4,296	13,280 b)
1941	2,969	66,621 c)

¶ Excess of departures.

*) For an adequate statistical and interpretative account of migration movements the reader is referred to the Annual Reports of the Department of Migration.

**) There is reason for believing that this generally recognised convention does not apply strictly in the case of Palestine.

a) Including 11,156 persons known to have landed illegally in Palestine, and to have remained, although liable to deportation.

b) Including 5,898 persons known to have landed illegally in Palestine and to have remained, although liable to deportation.

c) Including 195 persons known to have landed illegaly in Palestine.

(c) In recent years there has been a considerable unrecorded illegal movement across the land frontiers of Palestine and unrecorded illegal immigration by sea.

(d) Immigration is controlled by Government, legal immigrants falling into one or other of the categories shown in Table 27. The volume of immigration is regulated according to defined principles, a major consideration being the economic absorptive capacity of the country.

Citizenship.

32. The Palestine Citizenship Orders 1925 to 1939, permits the naturalization of foreigners. The qualification for naturalization are two years residence in Palestine out of the three years immediately preceding the date of application, adequate knowledge of one of the three official languages, good character and the intention to reside in Palestine. The number of persons so naturalized in 1941 were 11,121 as compared with 18,332 in 1940. Of these 11,028 were Jews, the previous nationalities being Czechoslovakian 332; German (including Austrian) 5,014,; Latvian 192; Lithuanian 261; Polish 2,700; Rumanian 564; Other countries and undefined 2,509.

AGRICULTURE.

33. Agriculture is the mainstay of the economy of Palestine, although, as indicated elsewhere, there has been considerable development of urban industries in recent years. Furthermore subsistence farming is still the rule over a considerable portion of the country; in spite of the inroads of commercial farming — mainly citrus growing — in the past decade. Some indication of the relative importance of agriculture is afforded by the statistics of geographical distribution of the settled population. The mean settled population of Palestine in 1941 was 1,500,000, of which total 718,000 or 48 per cent. lived in towns and 782,000 or 52 per cent. in the villages. The only rural industry of any importance is agriculture, the village population being supported almost entirely by agricultural pursuits. Again quite a material proportion of town dwellers find agricultural employment — particularly in citrus groves — during part of the year to an extent which would considerably outweigh the fact that the inhabitants of villages bordering on the larger towns often earn a supplementary income by urban work — notably in the building industry. Finally account must be had of the fact that much urban work in Palestine is ancillary to farm production. For example such urban industries as the transport of citrus fruits and the manufacture and repair of agricultural implements are directly dependent on local agriculture.

34. At the Census of 18th November, 1931, the latest date at which comprehensive statistics of the industrial distribution of the population are availble, 53.3 per cent. of the total settled population was directly supported by agriculture. At that time 41 per cent. of the population resided in towns and 59 per cent. in villages. Comparison with the 1941 statistics of town/village distribution (48 per cent. towns; 52 per cent. villages) suggests the existence of some measure of urban drift of population since 1931. It must not be assumed, however, that the importance of agriculture relative to that of other industries has declined in like ratio. On the contrary it might be found that the direct or indirect means of support of a considerable proportion of the increase in town population is to be found in work created by the greatly increased agricultural production — particularly of citrus fruits — since 1931

35. The character of agricultural production in this country is largely patterned by the peculiar climatic conditions; the entire absence of rainfall during six to seven months of the year, and inadequate water conservation resources, limiting the scope of production. For the most part crops are raised without irrigation, except in the citrus growing areas; but recently there has been a marked increase in the raising of fruits, vegetables and fodder on irrigated land. There are generally two crops harvested each year — cereal and leguminous crops in May and June and a summer crop in August and September. The cereals principally raised in Palestine are wheat, barley and durrah; the country also produces sesame, citrus fruits, melons, olives, grapes, bananas, figs and various other fruits and vegetables. In the north

of Palestine tobacco is cultivated. Oranges, grapefruit, lemons and a few other varieties of citrus are grown in the coastal plain and in the Jordan valley and are the main articles of the Palestine exports. Since 1939 considerable progress has been made in vegetable growing.

36. Sheep and goat breeding is widely spread in all the districts of Palestine while the dairy industry and poultry breeding have developed considerably in recent years, especially in the Jewish agricultural settlements. The working animals of Palestine are donkeys, mules, camels and horses.

Agricultural Statistics (Tables 35-37).

37. The data contained in these tables are estimates of the Department of Agriculture and Fisheries, production being estimated, village by village, by the District Officers of the Department of Agriculture. The figures should be regarded as only approximate; exact enumeration of the yield of each crop after harvesting is not practicable. Statistics of yield include produce consumed on the farm as well as that marked for consumption off the farm.The areas shown denote areas of crops in metric dunums. In many instances more than one crop is grown on the same land during each season.

The physical and social conditions of farming in Palestine such as the variety of climatic zones and crops, the multitude of very small farms, the absence of accounts and the somewhat patriarchal ways of farming and trading in certain regions, make the measurement of crops a most difficult task. The figures quoted in Tables 35, 36 and 37 should, therefore, be regarded as rough estimates.

The second part of Table 35 contains index numbers of the volume of crops, except citrus fruits, tobacco and fodder for the dairy industry, based on the actual data published in Tables 35 and 37. The principle of the construction of these index numbers is that of the Aggregate Index; the average crops as estimated during the period 1926 to 1930 are used as a base for comparison, and the average prices recorded during the years 1935 to 1939 (no previous records of prices of most crops are available) are used as weights.

38. In ordinary circumstances the only available measure of the yield of citrus is provided by the statistics of the export of citrus fruits. Citrus fruits are exported in cases and in bulk. Cases of various sizes are in use. The average net weight of a packed case of citrus fruits was estimated at 33½ kilos in respect of the years 1936 to 1938. In the 1938/39 and 1939/40 seasons larger sizes of cases were prevailing, and the average net weight of a packed case was roughly estimated at 37-38 kilos for oranges, 34-35 kilos for grapefruits and 35-36 kilos for lemons. In the 1940/41 season exports of citrus fruits were insignificant.

Production of Tobacco (Table 38).

39. The areas under tobacco plantations and the crops are registered with the Department of Customs, Excise and Trade each year in accordance with provisions of the Tobacco Ordinance. Since production of this commodity is controlled the statistics can be regarded as more exact than those for other crops.

Animal Husbandry (Tables 44-47).

40. The latest enumeration of the livestock of Palestine was made in 1937, the enumeration being based on the reports of mukhtars (the official village head-men).

FORESTRY.

41. Palestine is practically denuded of natural high forests, though about 140,000 dunums, mainly in the Galilean Hills are covered with scrub forest of some commercial value but of little utility as a natural means of water conservation or as a barrier against soil erosion. Afforestation work in this country is greatly hampered by the existence of grazing rights in a considerable proportion of the few remaining forest areas; but an attempt has been made by Government to conserve existing forests and areas suitable for afforestation, though of little value for other purposes, by the declaration of Forest Reserves on which revival operations and afforestation are carried out. The total area of such reserves and the additions in each of the last two years are shown in Table 48.

42. Private afforestation in Palestine has mainly taken the form of plantings of pine and eucalyptus, some 23,000 dunums having been planted by private agency up to 31st March, 1941. Statistics of such plantings are shown in Table 49.

43. It should be noted that available local supplies of wood—mainly for firewood supplies—are implemented to a considerable extent (though quite inadequately) by prunings from olive trees, dead wood from old olive trees and "cut-outs" from citrus plantings. The area under olive trees and citrus (582,952 dunums and 299,500 dunums respectively) exceeds very considerably the area under purely forest trees.

44. Imports of wood and wood products are of considerable consequence, amounting to £P.1,135,638 in 1939, 7.8 per cent. of the total value of imports in that year. Wood for citrus cases is an outstanding item in this group, imports of this item totalling 129,376 cubic metres in 1939, valued at £P.567,111.

FISHERIES.

45. Palestine is possessed of adequate fishing resources both sea and lacustrine. In actual practice the full development of these resources has not been possible; the catch of fish—though considerable—accounting for but 25 per cent. of all fish consumed as food and 50 per cent. of consumption of fresh fish. The sea fisheries are spread among a number of fishing centres on the Mediterranean coast, transport difficulties preventing the exploitation of the considerable but undeveloped resources of the Gulf of Aqaba on the Red Sea. The sources of fresh water fish supplies are the Lake of Tiberias and the Huleh lake, while a recent development is the breeding—as yet on a small scale—of fish in fresh water ponds. The output of the sea fisheries (in which before the war a number of foreign trawlers were engaged in addition to Palestinian boats) exceeds considerably that of the lakes.

46. Statistics of landings of fish are shown in Tables 50 and 51. The output is recorded by the Fisheries service of the Department of Agriculture and Fisheries, the values quoted representing prices paid to the producers.

MINERALS.

47. The mineral resources of Palestine capable at present of commercial exploitation are very restricted. As far as is known metallic minerals do not exist, nor does coal. The country, has, however, unique mineral resources in the Dead Sea—a highly concentrated solution of the chlorides of sodium, potassium and magnesium, also containing some bromine. Gypsum, limestone and clay for cement are also exploited while building stone of good quality abounds in the hill districts. Salt in a practically pure state is available in practically unlimited quantities at Jebel Usdom near the Dead Sea, where it is hewn in blocks; while at Athlit, salt is extracted from sea water basins by evaporation, the bulk of supplies being taken from this source. Sulphur is mined in Southern Palestine. Statistics of exports of Dead Sea chemical products (bromine and potash) are shown in Table 59, production of salt in Table 174 and production of cement in Table 176.

INDUSTRY.

48. While, as indicated earlier, Palestine is—and must be for many years to come—essentially an agricultural country there has been a very substantial industrial development during the past fifteen years. Imports of capital equipment for industrial enterprises have contributed very largely to the greatly increased flow of imports; and with the establishment of these industrial plants local production of manufactured products for home consumption has become increasingly important. In addition a not inconsiderable export trade in manufactured commodities has developed both in processed local raw materials—e.g. Dead Sea chemical products, essential oils, and in manufactures from imported raw materials, e.g. wearing apparel, vegetable oils, polished rice, artificial teeth. Very small scale industries and handicrafts still predominate, though many of the traditional handicraft industries have been subjected to an increasing pressure of competition from cheap imported goods and also, to some extent, from the products of the relatively newly established local factories. Changes in habits of consumption have also adversely affected the market for many

handicraft products; though, on the other hand, the substantial tourist trade* stimulated production and export of some classes of local handicraft products—notably articles of piety. The character of industrial production in each of the more important divisions and the statistics of recent development are referred to, briefly, in the following paragraphs.

Manufacturing.

49. Both handicraft and factory industries produce, in general, goods for local consumption such as foods, beverages, tobacco and cigarettes, clothing, furniture, building materials, newspapers and magazines, tools, stationery. The chief articles of industrial export are Dead Sea chemicals, cement, alcoholic beverages, — all made from local material; souvenirs and vegetable oils, partly from local material; and wearing apparel, chocolate, artificial teeth — made from imported materials.

50. The first official census of manufacturing industries was taken in 1928 and covered 3,505 industrial undertakings in which 17,955 persons were employed, including owners, technical and clerical personnel and contract labour. A further census was taken during 1940 but, the results are not yet available for publication. As regards Jewish industry and handicrafts, censuses have been taken by the Jewish Agency for Palestine and resulted in the following summary figures:—

	No. of establishments	Persons employed	Value of annual output
			£P
1930	2,475	10,968	2,510,000
1933	3,388	19,595	5,352,000
1937	5,606	30,040	9,109,000

51. The only statistics of manufacture collected and compiled by Government since the industrial census of 1928 relate to manufacture of commodities subject to excise duties and to production of cement. Following are observations on the figures which are given in Tables 172-174.

(a) The production figures quoted in respect of tobacco, tobacco products, salt and matches are derived from excise returns and correspond to annual deliveries and not to actual output.

(b) Statistics of production, as well as deliveries of intoxicating liquors are available. The figures, (quoted in Table 173) of alcoholic content of spirits (arak, cognac and other spirits) do not necessarily show a balance between production, consumption and export. Arak may be re-distilled from other spirits; cognac may be used in fortifying wine, while surplus production of potable spirits may be converted into methylated spirits for industrial use.

Building Activity.

52. Apart from agriculture, building and the manufacture of building materials constitute the most important industrial group in Palestine. Building activity was particularly high in the years 1933—35 owing to the arrival of large numbers of new settlers and a consequently chronic shortage of housing accommodation. Building activity decreased towards the end of 1935 and the disturbed political conditions since that year have resulted in a fall in building to a level only a fraction of the 1933—35 totals (vide page 40). Stone quarrying and dressing and the manufacture of cement are the most important of the industries directly connected with building.

Statistics of building activity in municipal areas are published in Tables 52 and 53. These figures are based on permits issued by the municipal authorities; so that the figures for any period do not necessarily indicate exactly building activity in that period, since permits may be taken out some time prior to the actual commencement of work. The figures of square metres of floor area of new building authorised in the four towns published in Table 54 afford a good indication of fluctuations in the quantum of building production in those towns, subject, particularly in respect of short period comparisons, to the qualification indicated above.

* At present reduced to relatively minor proportions owing to political conditions—here and abroad.

Electric Power.

53. The development of electric power production in Palestine in the past decade has been remarkable. The chief producers of electricity are the Palestine Electric Corporation Ltd. and the Jerusalem Electric and Public Service Corporation Ltd. The former owns steam generating stations at Haifa and Tel Aviv and a waterpower station at Naharayim on the Jordan. The latter owns a generating station in Jerusalem. In 1941 the combined sales of both corporations reached 112 million kilowatt-hours. More than half of the power sold was used for industrial purposes and irrigation; many of the local factories and workshops are electrified, and there is extensive rural electrification in the Jewish settlements and in the orange groves of the plains.

Statistics of the sales of electric current by the Palestine Electric Corporation and the Jerusalem Electric and Public Service Corporation are published in Table 175.

FOREIGN TRADE.

(NOTE—Owing to the abnormal features of trade during 1940 and 1941, these years are excluded from the following analysis of the trade of Palestine).

54. During the period of British Administration the foreign trade of Palestine has shown a remarkable increase. The value of exports has increased from £P.1,412,520 in 1923 to £P.5,117,769 in 1939; while imports increased from £P.4,948,907 to £P.14,632,822 in the same period. The relatively high importance of foreign trade in the economy of this country is illustrated by the following table showing, in Palestinian pounds, foreign trade per head of population in Palestine and in neighbouring countries during 1938:—

Foreign Commodity trade per head
Year 1938

Country	Imports	Exports	Total foreign trade
	£P.	£P.	£P.
Palestine	8.0	3.4	11.4
Egypt	2.3	1.8	4.1
Iraq	2.6	0.9	3.5
Syria	2.3	0.9	3.2

The "adverse" balance shown in the case of Egypt is not typical; in most years that country has a credit visible trade balance. Iraq, Syria and Palestine have had in recent years consistently "adverse" visible trade balances; but, as indicated by the table, the foreign trade of Palestine per head is very much larger than in these other countries—as is the excess of imports.

55. Analysis of the commodity trade statistics of Palestine over a period of years indicates the existence of a persistent import surplus. During the quinquennium 1923-27 the value of exports was 25 per cent. of that of imports while the average ratio in 1935-39 was 32 per cent. The maintenance of a visible trade situation of such unbalance over a long period of years is an indication of the existence of a considerable inflow of credits on account of invisible items, the most important contributing sources being: (1) Imports of capital (2) Tourist expenditures, donations to religious organisations, etc. The gap between exports and imports lessened considerably between 1935 and 1938; but the ratio of exports to imports fell in 1939 due to decreased exports of citrus fruits — a consequence of shipping difficulties owing to the War. Following are quotations of percentage ratios of exports to imports:— 1935, 25; 1936, 30; 1937, 39; 1938, 48 and 1939, 35. The reasons for the advance in the ratio of exports to imports are: (1) the growth in exports consequent on the rapid development of the citrus industry and the increased exports of certain manufactured commodities and (2) the decline of import trade from the 1935 peak level—due partly to lowered immigration and partly to the disturbed condition of the country.

56. While the persistence of a markedly adverse visible trade balance is probably the most striking feature of the foreign commodity trade of Palestine, the distribution of that trade also shows special characteristics of considerable social and economic significance. The dominance of citrus fruits in the export trade is particularly striking, exports of citrus fruits accounting for 77 per cent. of the total value of exports in the quinquennium 1935-39, and 66 per cent in the twelve months ended in May, 1940. Dead Sea chemicals—Potash and Bromine—have become, after citrus, the next important item of export. Soap, once second in importance, has declined with the virtual closing of the Egyptian market. There are no other very large items but noteworthy are—artificial teeth, vegetable oils, polished rice, cotton yarn and threads. The dependence of Palestine's export trade on the citrus industry is of great moment; income from exports, and the well-being of a large section of the community, are closely dependent on prices received for citrus fruits in overseas markets. The restriction of markets for any considerable quantity of citrus exports** and the sensitivity of prices on these markets to increasing supplies of citrus fruits has resulted in a situation in which artificial restriction of the growth of the industry has become necessary. Even without further planting the crop available for export will increase as young plantations become more mature and Palestine is faced with the problem of marketing an ever increasing crop.

57. While the export trade of Palestine is of very limited range, imports are widespread. Imports of food-stuffs are still of considerable importance—particularly in years of poor cereal harvests. While agricultural production for local consumption has increased very materially in recent years both in quantity and variety of commodities (vide page 27) production of the considerable range of such commodities that can be successfully raised in Palestine is not yet sufficient for the growing needs of an increasing population. Consequently imports of food have tended to account for a relatively constant proportion of a vastly increased import trade; the percentage of imports of food to total imports in the quinquennia 1923-27 and 1935-39 being 27 and 25 respectively.

58. Imports of "articles mainly manufactured"—which omnibus heading, incidentally disguses the inclusion of a wide range of capital equipment—have increased from an annual average value of £P.3,358,992 in the quinquennium 1923-27 to £P.8,754,469 in the quinquennium 1935-39. While a precise classification of imports according to the purpose for which they are intended is not yet available, a rough indication of the extent to which capital equipment and raw materials for industry contribute to the import trade of Palestine is afforded by the following necessarily incomplete enumeration of commodities of this nature included in the import trade of the year 1939:—

Imports of certain industrial materials — 1939.

	£P.
Raw materials and articles mainly unmanufactured	1,481,000
Iron and steel and manufactures thereof	1,105 000†
Non-ferrous metals and manufactures	170,000†
Miscellaneous tools and implements	90,000
Electric cable and wire	49.000
Machinery	916,000
Prepared wood for citrus cases and other industrial purposes	652,000
Yarns and tissues	902,000
Leather	136,000
Chemicals, drugs and fertilizers	354,000
Paper and paper manufactures	276,000†
Sacks and bags	62,000
Personal effects (say)	150,000†
Total	6,343,000

**) Four countries took 91.0 per cent. of citrus exports in 1939-40 — United Kingdom 67.9 per cent; Holland 12.2 per cent; Belgium 6.6 per cent. and Sweden 4.2 per cent.

†) Excluding the value (arbitrarily estimated) of consumers' goods coming under these headings

The total of the above items (£P.6,343,000) represents 59 per cent. of the combined value of imports of raw materials and manufactured commodities in 1939 and 43 per cent. of the total value of imports in that year. In addition, account should be taken of the fact that a considerable proportion of imports of motor vehicles, motor spirits and lubricating oils may be regarded as the "raw material" requirements of the road transport industry. The value of imports of these items in 1939 was £P 795,000. The figures quoted in this paragraph afford evidence of the high importance of capital equipment and producer's materials in the import trade of this country.

59. A close relationship is normally observed between changes in the ratio of imports and in the flow of immigration. In fact imports of manufactured goods which, as indicated above, include a large quantity of capital equipment, were in almost straight line relationship with the number of immigrant arrivals.* Imports of the personal effects of immigrants—which item includes the tools of trade, furniture, etc. of intending settlers—are high compared with the figures for most countries. The value of imports of this item in 1939 was £P.749,335, 5 per cent. of the total value of imports. It should be noted that imports of personal effects, though quite properly included in the trade accounts, do not represent a charge on Palestinian funds; while, again, such part of other imports of capital goods as represents the equipment of newly arrived immigrants (e.g. the machinery equipment of immigrant manufacturers) cannot be regarded as a charge on exports. The latter fact is of particular consequence in the case of immigrants from countries where restrictions on the purchase of foreign exchange are operative.

Explanatory Notes on the Statistical Tables.

60. Statistics of foreign trade, in summary form, are included on pages 43-56 (Tables 55-65). More detailed statistics are published in the Blue Book and in the annual publication "Statistics of Foreign Trade".

Consideration of the following limiting factors and definitions of terms is necessary towards a proper understanding of the significance of the figures:—

(i) Trade with Trans-Jordan was not included in the Palestine trade statistics prior to July, 1941. Therefore, the trade statistics of Palestine do not include the figures for Trans-Jordan prior to 1941 while in 1941 they included only the figures for the trade with Trans-Jordan for the second half of that year. According to the Trans-Jordanian statistics of trade, Trans-Jordan exported to Palestine in 1941, goods to the value of £P.578,250, while that country bought from Palestine in the same year Palestine produce valued at £P.202,360, besides foreign goods duty paid in Palestine subsequently consumed in Trans-Jordan valued at £P.313,136. The import of Trans-Jordanian produce is confined to a few commodities, the import of cereals being the major item—particularly in seasons of poor harvest. This fact is of considerable importance in the interpretation of recorded statistics of imports of these commodities. For example the import statistics show that imports of wheat in 1940 totalled 44,308 metric tons; but, in addition, there was an import from Trans-Jordan of 51,748 tons.†

(ii) Imports of Military stores and equipment and N.A.A.F.I. stores (commodities for consumption by His Majesty's Forces) are now excluded from the totals of imports quoted in statistical publications**, the exclusion dating from the beginning of 1938. These commodities are included in the figures compiled for previous years — prior to 1937 as miscellaneous and unclassified items, and, in 1937, in the itemised accounts. Prior to 1936 the amount involved was not large but imports of this class in 1936 were valued at £P.579,095; and in 1939, at £P.2,521,036 — a total of some consequence as compared with the total value of all other imports (£P.14,632,822).

(iii) Personal effects are included in the recorded totals of imports as is customary in countries where immigration is significant. The values given for this item must, from its nature, be regarded as approximations only.

*) In this connection imports of building materials are of considerable consequence.
**) The figures are, however, still compiled but shown separately.
†) Secured from Trans-Jordan statistics.

(iv) Exports are valued at the values declared by exporters at the time of export: the basis of valuation is "free on board" at port of loading. The value of imports represents the value which an importer would give for the goods delivered to him at the port of import free of freight charges, insurance and all other costs to the port of import — but not customs duties. Valuation of citrus fruits presents a difficulty in that there is a time lag of at least 14 days between the shipment of the goods and their sale overseas. Consequently in a period of rapid price change, the exporters' estimate at the time of export is subject to an appreciable margin of error. The matter assumes importance — particularly in short period comparisons — in view of the high importance of citrus fruits in the export trade of this country*. Valuation of exports of citrus fruit in bulk must be regarded as approximate only. Most of this fruit is of second grade quality (large sizes) exported to Syria in many instances for what it will fetch. Bulk exports are, however, relatively unimportant.

(v) The statistics of exports are compiled from the Customs manifests. Owing to the fact that some time must inevitably elapse between the actual movement of goods and completion of the documents, statistics of exports and statistics of loading will not relate to exactly corresponding periods of time. Consequently short period statistics of shipments and of exports differ — in some instances quite materially.

(vi) In the interpretation of annual statistics of trade consideration must be given to the fact that the calendar year—the most convenient time unit for international comparisons—does not correspond with the export season. For example exports in the calendar year 1939 include the peak months of the 1938/39 citrus export season and the early months of the 1939/40 season, while the early exports of the 1938/39 season come within the calendar year 1938. Exports of the new season's crop are normally heavy in the first three months of the year, with the result that quite a different picture may be presented by export statistics on a calendar year basis from that shown by exports for single complete seasons. (Table 60 gives citrus exports for years ending in May.)

(vii) Statistics of trade with individual countries (Tables 61-63 pages 53-55) are subject to certain reservations. Imports are recorded by country of origin which is easily ascertainable from the documents, but the final destination of exports is not always known at the time of export**. This is a universal difficulty; estimates of the balance of trade between any two countries invariably disagree according to the accounts of each country concerned to a greater extent than is accounted for by differences in the basis of valuation. A point of particular significance in the interpretation of Palestine statistics of trade by countries is the relatively high proportion of personal effects in the imports from certain countries. For example, imports of personal effects from Germany in 1939 totalled £P.525,751, 33 per cent. of the total value of imports from that country. This item is in a somewhat different category from normal commercial trading.

(viii) Statistics of import trade by countries for years before 1934 are classified according to countries of consignment; while the figures for 1934 and subsequent years are on the basis of country of origin (vide Tables 61-63).

(ix) Statistics of trade in living animals not for food (value in 1939 £P.33,671) are subject to considerable reservations. In the first place valuation is difficult; while, again, it is not easy to establish the country of origin. For example many camels arrive in Palestine from Trans-Jordan (not recorded in the statistics) and subsequently move to Egypt. Since 1938 an endeavour has been made to classify such animals as re-exports.

(x) There is a transit trade of some consequence through Palestine to and from Iraq by the trans-desert motor route. This trade was not recorded prior to 1935 but has since been included in Palestinian transit statistics (value in 1936, £P.192,418).

(xi) Exports of Bromine recorded in the export statistics represent quantities drawn each month from the company's stocks. These stocks are located not in Palestine but at Port Said. Transit from the Dead Sea to stock is not compiled.

*) This difficulty is not peculiar to Palestine but is encountered in the countries exporting products of the soil for auction overseas.
**) For example oranges may be consigned to the United Kingdom and subsequently sold there to a continentalpurchaser.

(xii) Trade statistics for 1940 and 1941 exclude petroleum products, Dead Sea chemicals and certain other commodities. Moreover, imports and exports of bullion and specie are withheld from publication.

(xiii) Miscellaneous inclusions and omissions—

(a) Ships stores and bunker coal and oil are not included in the statistics of trade.

(b) Bullion and specie is shown separately and not included in the general totals. Specie is shown at its face value.

(c) Fish arriving from the sea fishing grounds in Palestinian boats is not included.

(d) Crude oil loaded at Haifa from the I.P.C. pipe line from Iraq is not included in the statistics of transit trade, but is recorded and published separately. The oil is valued at an arbitrary price in the statistics (800 mils per ton).

(e) Imports of Government stores are included in the itemised accounts of trade for 1937-1941.

(f) Imports by all institutions entitled to exemption from import duties were compiled only under the consignee headlings prior to 1937. In that year they were itemised as far as possible and included in the general totals shown for each appropriate item. After 1937, Military and N.A.A.F.I. stores were excluded; but imports by other institutions entitled to exemption continue to be included in the itemised statistics.

TRANSPORTATION AND COMMUNICATION.

Ports.

61. The ports of Palestine open for customs purposes are Haifa, Jaffa (including Tel Aviv), Acre and Gaza. The only modern harbour is the one at Haifa, providing a depth of 30 ft. alongside the main quay. Jaffa port contains a small craft harbour at Jaffa and a lighter harbour at Tel Aviv. At Jaffa and Tel Aviv vessels anchor at open roadstead, and cargo is discharged into lighters which in turn discharge at quays inside the small craft harbour or the lighter harbour. Large vessels rarely call at Acre and Gaza.

The construction of the Haifa harbour was completed in 1933; loading and discharge of goods at Tel Aviv lighter harbour commenced in 1936.

Coastal trade and internal water transport are insignificant in Palestine.

Statistics of Shipping.

62. The shipping statistics of Palestine (Table 66) are derived from the records of vessels entered at and cleared from the ports of Palestine, kept by the Port Managers. In the part relating to the aggregate weight of cargo discharged and loaded these records are supplemented by the records kept at the Customs Stations.

The tonnage of cargo and the registered tonnage of ships are given to the nearest ton in all cases. The tonnage of vessels denotes the registered net tonnage, according to the regulations adopted in the countries of registration. The tonnage of cargo handled at ports is shown in metric tons of weight.

As from 1938 the figures relating to Sailing vessels include small motor boats.

Railways.

63. The railway system of Palestine comprises three main sections:—

(a) The standard gauge Palestine Railway, running from Haifa to Rafah on the Egyptian border and with branches from Lydda to Jerusalem and Jaffa. A short branch to Petah Tiqva is partly owned by that colony. The total length of this system is 333 kilometres.

(b) The Sinai Railway (Kantara—Rafah line) crossing the Sinai province of Egypt, owned by His Majesty's Government and worked by the Government of Palestine connects Palestine with the Egyptian railway system at Kantara on the Suez Canal. Its length is 203 kilometres.

(c) The narrow gauge Hejaz Railway, including Haifa—Acre, Haifa—Samakh and Tulkarm—Nablus sections in Palestine and the Nassib—Amman—Ma'an section in Trans-Jordan, the last section being used by the Trans-Jordan Government though operated by the Palestine Government. The length of the line in Palestine is 144 kilometres, and in Trans-Jordan 323 kilometres.

The total length of the railways on the territory of Palestine is, therefore, 333 kilometres of standard gauge and 144 kilometres of narrow gauge (105 cm.).

Railway Statistics (Tables 68-74).

64. All figures except those shown in Table 74 relate to the financial years ending 31st March. Table 68 shows capital investment in the Palestine Railways and the lines operated by the Administration of the Palestine Railways. The figures in italics denote the amounts invested by the Palestine Railways in other Operated Lines. The figures in italics in Table 70 show the deficit of the Railways. Tables 71 to 74 contain an analysis of the traffic and the financial results of the Palestine Railways and Operated Lines for a number of years.

Road Transportation.

65. The length of all weather roads in Palestine at the end of 1941 was 2,558 kilometres. In addition there were 1,534 kilometres of dry-weather roads. The recent years have witnessed a rapid development of motor transport. Regular communication is established between the cities of Palestine, serving both passengers and goods traffic.

There are no Tramways in Palestine. Inter-urban communication is effected by omnibuses and by fleets of motor cars licensed as public vehicles.

Motor Vehicles Statistics (Table 75).

66. The registration of motor vehicles is effected by the Traffic Offices which are a part of the Department of Police and Prisons. All motor vehicles brought to Palestine for use on roads have necessarily first to be registered and thereafter licensed annually. The lists of motor vehicles registered are periodically revised. The difference between the figures for "Registered" and "Licensed" represents the number of motor vehicles in the country still registered but not actually in use, some of which are no longer fit for use.

Commercial Road Transport Statistics (Table 77).

67. The figures presented in Table 77 are directly supplied by six large road transportation agencies, all the six agencies being Jewish co-operative societies. The lines operated by these societies connect localities where the Jewish population is concentrated.

Statistics of Road Accidents (Tables 78 and 79).

The statistics of roads accidents are compiled by the Police authorities on the basis of the records kept by the Traffic Police. No records are available for 1938.

Civil Aviation (Table 67).

68. Air services in Palestine make use of three aerodromes at Lydda, Haifa and Tel Aviv and two seaplane stations—at Haifa* and Tiberias—customs and migration facilities for travellers abroad being provided at all stations except Tel Aviv. There is also a landing ground for local flights at Ashdot-Yaakov in the Jordan Valley. Local services provide communication with Cyprus, Syria, Egypt and Iraq, and there are through services to England, India, the Far East and Australia.

Statistics of civil aviation are now being compiled from the log books kept at each landing station. Full information is available only since January, 1939.

*) Emergency Seaplane Station.

Posts, Telegraphs, Telephones, Wireless.

69. Postal despatches are exchanged regularly between all principal cities of Palestine. At the close of 1941 there were 58 Post Offices and 24 Postal Agencies. The length of the telegraph and telephone lines was 110,144 kilometres in local systems and 24,968 kilometres in trunk lines. The number of telephone instruments in use was 19,949. A broadcasting station, operated by the Government, was established in 1936, and daily programmes are chiefly transmitted in English, Arabic and Hebrew. The number of wireless receiving licences in force at the end of 1941 was 50,907.

Statistics of the operations of the Department of Posts and Telegraphs are given in Tables 80-82.

PRICES.

70. Statistics of wholesale and retail prices are collected by the Government Statistician at weekly intervals, index numbers being compiled from this data affording a measure of the direction and extent of price changes in Palestine. The methods of compilation and limits to the application of the statistics are indicated in the following paragraphs:—

Wholesale Prices (Tables 112-114).

71. Statistics of wholesale prices in the four main towns, from which monthly index numbers are compiled, are collected by the Government Statistician. Prices ruling on Thursday of each week are collected, from which monthly average prices are computed. This system was brought into operation in 1936 but a historical table (Table 114) giving a contiuous series of index numbers back to 1920 has been constructed from a pre-existing series of index numbers compiled for those years by the Department of Customs. The commodities included in the present index are 53 in number, subdivided into three groups; Grain and Meat (18 items), Other Foods and Fruit (21 items) and Fuel and Miscellaneous (14 items). Separate index numbers are compiled for each group as well as an all-groups index; but index numbers are not compiled for individual towns, nor is a distinction made—as in the case of retail prices—between the Arab and Jewish communities. The wholesale prices index is an unweighted geometric average of month to month price ratios chained to June, 1936, as base. While the index adequately covers foods marketed at wholesale it does not, as yet, give a sufficient representation to producers' materials and consumers' goods other than foods. The reconstruction of the index is under consideration; and to this end the number of commodities for which prices are collected has been increased.

72. As a result of the war, Government proceeded with plans to control food and other essential commodities. One step in this direction was to fix maximum prices on essential commodities. Free dealing in such commodities has been prohibited by law and prices published are in all cases those fixed by Government from time to time.

Retail Prices (Tables 115-118).

73. Until January, 1940, statistics of retail prices were collected from Arab and Jewish retail markets in Jerusalem, Jaffa, Tel Aviv and Haifa at monthly intervals, the prices quoted in Tables 115-118 being market prices on the 15th day of the month. Through the courtesy of the Municipal Corporations who act as district agents for this Office in the collection of retail prices statistics, the Office has been able to collect the quotations at weekly intervals since January, 1940. The index numbers for 1940 are, consequently, based on monthly average prices, i.e. the average of four or five weekly quotations, a procedure which gives more accurate results than the collection of price quotations on a single day in the month. The units of quantity for which retail prices quotations are collected and published are the local units of weight and measure in which trading is actually carried out — (vide page 1 for metric and British equivalent).

74. In addition to compiling and publishing records of prices of certain essential commodities, the Office of Statistics also compiles an index number indicative of average changes in retail prices (vide Table 115). With the introduction of the new system of collection and in view of the difficulty of carrying out a family budget inquiry, the Office of Statistics has revised its cost of living index numbers.

The principal changes brought into effect have been:—

(a) differentiation between the Arab and Jewish urban communities, a separate index being compiled for each community. (The previous index related to an average urban Palestinian family without distinction between communities).

(b) the compilation of separate indices for each community in each of the four main towns, Jerusalem, Jaffa, Tel Aviv and Haifa, as well as an average index for each community for Palestine as a whole. (Previously only one index was compiled for the whole of Palestine based on averages of prices in Jerusalem, Jaffa and Haifa; Tel Aviv, a small town in 1922, was not included.)

(c) the revision of the list of commodities and the bringing up to date of the weighting of the various commodities included in the index numbers. For this purpose, in the lack of a family budget inquiry, the Office of Statistics had recourse to various official and non-official sources of information including direct inquiries from a number of housewives.

75. The revised series of index numbers relate almost exclusively to food commodities, only two non-foods (kerosene and soap) being included. The index thus falls far short of completely covering all items entering into the cost of living of the average family and should not be interpreted as measuring changes in the cost of living. It is obvious that rentals or clothing prices, for example, may move to a greater or less degree or even in a different direction from food prices. Nevertheless, despite this limitation to its application, an index number of food prices serves a very useful purpose particularly in present circumstances. Family budget investigations carried out in other countries, indicate that expenditure on food accounts for a very considerable proportion of total household expenditure ranging between 29.5 per cent. to 63.9 per cent.

LABOUR STATISTICS.

Wages Rates (*Tables* 83-87).

76. The information on the predominant and average daily wage rates was extracted from employers' returns in respect of Arab and Jewish labour and from reports of the labour unions in respect of Jewish labour. The information on wage rates in agricultural employment is supplied by the Agricultural Officers of the Department of Agriculture and Fisheries, by Farmers' Organisations and by labour unions. The index numbers of daily wage rates paid to Arab labour are based on employers' reports, those relating to Jewish labour are based on the union scale of wage rates supplied twice a year by the General Federation of Jewish Labour in Palestine. The index number for each industrial group is weighted by the number of earners who were engaged in the corresponding industry in November, 1931, when the last Census was taken, Jewish weights being determined in each case by the number of Jewish earners and Arab weights by the number of non-Jewish earners in the industries. Since 1937 revised Jewish weights are used—based on the Census of Jewish Industry carried out in that year by the Jewish Agency for Palestine. No weights are used for each occupational group within industrial groups. For fuller description of the method used in the construction of the Palestinian index numbers of wage rates the reader is referred to the Wage Rates Statistics Bulletin issued by the Office of Statistics.

Table 87 contains average hourly wage rates, hours worked and earnings of the workers enumerated at the Wage Census, 1941. (More detailed information regarding the 1941 wage census were published in the General Monthly Bulletins of Current Statistics Nos. 6, 7 and 8 of 1941).

Labour Disputes (*Tables* 92-98).

77. Information on labour disputes in the years before 1938 was supplied by officers of the District Administration. Since January, 1938, reports on labour disputes, their causes, terms of settlement, workers involved, time lost, etc., were obtained directly by the Office of Statistics from the employers affected and from employers' and workers' organizations. Only disputes caused by demands of an economic nature are included. Tables 92 to 98 contain information on strikes and lockouts, i.e., cases of disputes

where temporary stoppage of work has been wilfully effected by employers or by the workers employed at the establishments under dispute. No distinction is made between strikes or lockouts. Cases where work has been stopped for less than one day are not regarded as strikes or lockouts, nor are cases of sabotage without stoppage of work included in these tables.

78. Other definitions and rules adopted in the collection and compilation of the official statistics of labour disputes in Palestine were explained in detail in the Labour Disputes Bulletins issued by the Office of Statistics.

Statistics of Industrial Accidents (*Tables* 99-111).

79. The statistics of industrial accidents in Palestine are extracted from the annual returns of injuries and compensation supplied by employers of labour in specified industries in accordance with Section 10 of the Workmen's Compensation Ordinance. Due to certain changes in the interpretation of the Workmen's Compensation Rules in force and in the administrative procedure, the number of cases reported in 1939 showed an appreciable increase as compared with previous years. A further increase in the number of reports is expected in the future. There is a year's delay in the compilation of the statistics of industrial accidents as under the existing rules the employers are allowed a period of eleven months after the close of the year under report, to submit their annual returns.

For fuller particulars of industrial accidents in Palestine, methods of collection and compilation, legislative measures, etc., the reader is referred to the Industrial Accidents Statistics Bulletins issued in 1940 and 1941.

Employment (*Tables* 88-91).

80. Statistics of employment in Palestine have been collected by the Office of Statistics since the beginning of 1938. No data are available for periods prior to January, 1938. Returns are collected each month from 368 employers of labour containing three items (1) Number of employees (2) Man-days worked during the month (3)Amount of Pay-roll. The following observations are necessary as a guide to the proper use of these statistics as a measure of changes in the employment situation:—

(a) The figures as yet cover only a part of the employing establishments in the country—notable omissions being the building industry, road transport trading and financial institutions.

(b) Owing to the limited scope of the statistics, Government Departments are over-represented in the sample — though this difficulty is in part met by the separation of salaried employees and daily wage earners in the statistical compilations. The figures given relating to daily wage earners in 330 manufacturing establishments form the series most significantly indicative of current economic trends.

(c) Statistics of number of employees represent the total number given employment during the month—irrespective of the length of time worked. The statistics of man-days worked (1 man working 1 day=1 man-day) thus form the more accurate indication of trends in employment.

(d) While changes in the amount of pay-roll are significant and interesting, it must be remembered in the interpretation of these statistics that pay-roll represents a combination of several variables and does not necessarily fluctuate in exact relationship to changes in employment. In particular it has been observed that in some industries a fall in pay-roll is, on occasion, less than a fall in employment; due to the retention by some manufacturers of a skilled and relatively more highly paid cadre of skilled employees, and the dismissal of less skilled workers.

(e) The monthly index numbers of employment are adjusted for variation in the number of working days in each month; and thus relate as nearly as practicable to equal intervals of possible working time.

GOVERNMENT FINANCES.

81. Government revenue fluctuated in the first ten years of the civil administration between £P.1,675,000 and £P.2,500,000 per year. In the four years 1932/33 to 1935/36 annual revenue increased rapidly, reaching £P.5,770,457 in 1935/36; with

the disturbed conditions of the succeeding years revenue fell to £P.4,897,456 in 1937/38, but rose to about 6 million pounds in 1938/39, to £P.6,868,000 in 1939/40 and to £P.8,478,382 in 1940/41. The increase in revenue during the years prior to 1935/36 was accompanied by a substantial change in the relative importance of the main sources of revenue; receipts from customs duties tending to form a much greater proportion of total revenue than was the case formerly (27.4 per cent. in 1921/22, 47.7 per cent. in 1935/36). This is not surprising in view of the rapid development of the country in the fifteen years prior to 1935/36. The share of customs revenue to total revenue fell to 32.1 per cent .in 1938/39, to 29.4 per cent. in 1939/40 and to 24.2 per cent. in 1940/41, owing to the rise in grants-in-aid received from H.M. Government. It will be observed, however, that revenue derived from customs duties accounted for 43.6 per cent. of revenue derived from local sources in 1939/40 and 39.5 per cent. in 1940/41.

82. Revenue from taxes on agriculture has tended to become relatively less important since the last War. Such taxes (the tithe, animal tax and rural house and land taxes) formed the main source of revenue under the Turkish regime and in the early years of the post-war civil administration. Revenue collected from tithes and animal tax in 1922/23 totalled £P.249,399, 13.8 per cent. of total revenue, and, in 1939/40, only £P.33,828—0.5 per cent. of total revenue. The fall in the yields from these taxes has been due partly to a succession of bad harvests and partly to considerable modification of the system of land taxation. The tithe was reduced from 12½ per cent. of the gross yield of farm produce to 10 per cent. (in 1925), replaced by a commuted tithe (in 1928); and finally the tithe and house and land taxes were abolished in 1935 being replaced by the Rural Property tax. The latter tax, introduced on completion of a topographical survey of rural areas, varies according to the class of land; the rural areas being classified into 16 categories according to quality of land, citrus land paying the highest tax per dunum while the rate is progressively reduced on poorer classes of land, no tax being paid on uncultivable land. In 1939/40 the rate on citrus land was reduced from 400 mils per dunum to 150 mils per dunum; in Acre sub-district the rate remained at 40 mils per dunum. In 1940/41 the tax on land planted with citrus was abolished. Revenue collected as Rural Property tax amounted to £P.187,534 in 1939/40.

83. Government expenditure kept pace with revenue during 1920 to 1932; but in the boom period of the succeeding years lagged behind the rapidly rising revenue returns, with the result that by the end of 1935/36 a surplus of £P.6,627,810 had accumulated. In the disturbed conditions of the subsequent years total expenditure increased owing to heavy expenditure on security measures while at the same time revenue declined sharply, reducing the surplus balance to £P.2,533.265 on 31st March, 1939. In 1940/41 revenue exceeded expenditure by £P.1,028,027, owing to considerable grants from H.M. Government in the United Kingdom. The accumulated surplus balance at 31st March, 1941, including appreciation of investments amounted to £P.4,424,780.

The Statistical Tables (*Tables* 119-122).

84. Statistics of revenue in each year since 1920 are published in Tables 119-120 and statistics of expenditure in Tables 119 and 121. The fiscal year, originally adopted for the Treasury's annual statements and accounts, covered a period from 1st April to 31st March; the first full fiscal year began on the 1st April, 1921, and terminated on the 31st March, 1922. In 1927, the fiscal year was made to coincide with the calendar year, but in 1932 the original fiscal year (1st April to 31st March) was reinstituted. To facilitate comparisons, figures of total revenue and expenditure for the whole period from 1920 to 1940/41 published in Table 119 have been recast on basis of a uniform fiscal year (from 1st April to 31st March).

85. The analysis of revenue published in Table 120 is grouped into 12 main headings; the most important of these being Customs; Licences, Taxes, etc.; Fees of Courts and Office, etc.; and Posts and Telegraphs. It should be noted that until 1929 the gross revenue and gross expenditure of Railways appeared in the appropriate headings of revenue and expenditure; but, as from 1929, only the net excess of railway receipts appears under revenue, or, alternatively, the net railway deficit appears as an item of expenditure.

86. Two of the important classes viz. Licences, Taxes, etc., and Fees of Courts and Office, etc., into which revenue is divided in the Summary in Table 120 include a variety of items all of which do not move in concert. The relative fall in importance of licences, taxes, etc., as a revenue heading (comprising 15.8 per cent. of total revenue in 1940/41 is due to the inclusion of agricultural taxes in this heading. Some of the other items included, e.g. excise duties, urban property tax and stamp duties have increased considerably in yield in the past decade. The following further analysis of revenue in 1940/41 under this heading is informative:—

Licences, Taxes, etc. 1940/41.

	LP.	% of total for this group
1) Licence fees of all kinds	89,388	6.7
2) Animal Tax	33,628	2.5
3) House and Land Tax	3,393	0.3
4) Tithe (in Beersheba and Hula Areas where this tax is still operative) and arrears	7,429	0.6
	165,986	12.5
5) Rural Property Tax	410,225	30.8
6) Urban Property Tax	80,576	6.1
7) Stamp Duties	—	—
8) Tobacco Tax	23,873	1.8
9) Excise on matches	13,253	1.0
10) Excise on salt	325,943	24.5
11) Excise on tobacco	107,345	8.0
12) Excise on intoxicating liquors	68,713	5.2
13) Fines and forfeitures	1,329,752	100.0
TOTAL		

87. The heading Fees of Court, etc., shows a considerable increase in relative importance in recent years (8 per cent. of total revenue in 1922/23; 9.4 per cent. in 1939/40). The following table shows, in respect of 1939/40, the relative importance of each of the several items coming under this heading:—

Fees of Court, etc., Receipts for Specific Services and Reimbursements, 1940/41.

	£P.	%
Fees—		
Fees of Court	135,506	19.0
Land Registration fees	180,733	25.4
Passport fees	8,207	1.1
Registration of companies, fees, etc.	5,875	0.8
Fruit inspection fees	1,996	0.3
Porterage charges (Haifa Harbour)	31,142	4.4
Custodian of Enemy Property	17,853	2.5
Other fees	75,109	10.5
Receipts—		
Warehouse rent	17,069	2.4
Palestine Archaeological Museum Endowment Fund	9,644	1.4
Sale of water to Jerusalem Municipality	66,240	9.3
Other receipts	111,730	15.7
Reimbursements— Total	51,446	7.2
TOTAL	712,550	100.0

CURRENCY.

88. Under the Turkish Regime many European currencies circulated in Palestine side by side with Turkish money. In commercial and trade circles, however, preference was given to French currency, particularly the gold Napoleon piece of 20 francs. During the World War, devalued paper Turkish currency drove metal coins out of circulation, causing great hardship to the population. After the occupation of Palestine by the British forces, Egyptian currency, then in use by the troops, was proclaimed legal tender and this currency remained in use in the early years after the War. A Palestine Currency Board was set up in 1924 and a new Palestinian currency was first put into circulation on 1st November, 1927. In this volume monetary values relating to periods prior to that date have been converted from Egyptian pounds to Palestinian pounds. Early in 1928 the new Palestine currency was made the sole legal tender.

89. The Palestine pound, at parity with the pound sterling, is divided into 1,000 mils, and is issued as a paper note. Other paper notes are of the following denominations:— 500 mils, £P.5, £P.10, £P.50 and £P.100. There is also a provision for a gold coin of £P.1 but it has not been put into circulation. In addition to the paper notes, the currency comprises silver coins of 50 and 100 mils each, nickel coins of 5, 10 and 20 mils each and bronze coins of 1 and 2 mils each.

90. The Palestine currency is issued and controlled by a Currency Board in London, represented in Palestine by the Currency Officer; the Board's agents are Messrs. Barclays Bank (D.C. & O.). According to the Currency Ordinance the Palestine Currency Board is obliged to exchange on demand sterling for Palestine Currency and vice versa. It may, however, invest its sterling funds in British Government Securities (or in such other securities which may be approved by the Secretary of State). Net profits from the currency fund remaining after allowance has been made for reserves are paid annually to the Palestine Government as a contribution to the general revenue. In the years of its existence the Board has contributed to the Palestine Government a total of £P.1,025,000.

The amount of currency in circulation at the 31st March, 1941, totalled £P.11,040,635, and the currency Reserve Fund amounted to £P.11,268,210. Total assets including investments, deposits and silver coins exceeded the total face value of the currency in circulation by £P.898,644 or 8 per cent. Statistics of the value of currency in circulation are shown in Tables 125 and 126.

BANKING.

Banking Statistics (*Tables* 127-131).

91. Commercial banking facilities are provided in Palestine by three main groups of financial institutions, namely, foreign banks (branches of large foreign banks), local banks and credit co-operative societies. In principle credit co-operative societies differ from the ordinary commercial banks, but in their main activity of accepting money deposits and granting credit they perform for their members the same service as commercial banks. The existence on the one hand of foreign banks of long standing and on the other hand of highly developed credit co-operative societies, provided small opportunity for the establishment of local banks in the first post war decade. In the "boom" years of 1933 to 1935, however, a large number of small banks come into existence. At the end of March, 1936, there were, besides the six foreign banks and some 100 credit co-operative societies, no fewer than 70 local banks. Many of the local banks were small institutions, with limited capital and reserves. The average capital and reserves of these 70 local banks was only £P.21,277 in March, 1936.

92. Banking legislation aiming at strengthening the capital position of the existing local banks and limiting the number of new small institutions came into effect in October, 1937. According to the Banking (Amendment and Further Provisions) Ordinance, 1937, no company can be registered to carry on banking business in Palestine unless its subscribed capital is not less than fifty thousand pounds, of which not less than twenty five thousand pounds is paid up. Existing local banks whose

subscribed and paid up capital was less than the required amount were given a period of nine months, i.e. up to July, 1938, to raise their subscribed capital to a sum not less than twenty-five thousand pounds and their paid up capital to a sum not less than ten thousand pounds, and a period of two years, i.e. up to October, 1939, to raise their capital up to the minima* prescribed for new banks. As a result of the requirements regarding bank capital many smaller banks, unable to fulfill the provisions of the Ordinance, had to cease to carry on banking operations as defined by the Banking Ordinance. At the end of December, 1941, the number of local banks so operating had fallen to 27. (Certain credit co-operative societies** which had been converted into companies are also included in this figure).

93. Published banking statistics are extracted from monthly and half-yearly statements submitted by individual banks to the Treasurer under the Banking Ordinance, 1941. Mortgage banks are also required to furnish monthly returns but their statistics are not published since only two mortgage banks come under the Ordinance and publication of totals for two concerns is contrary to the practice of the Office of Statistics. Credit co-operative societies are not required by Ordinance to submit monthly statements of their assets and liabilities but nearly all have agreed to do so on a voluntay basis at the request of the Registrar of Co-operative Societies. The number of regularly reporting credit societies at the end of December, 1941, was 85, 33 urban and 52 rural.

EDUCATION.

94. At the date of the British Occupation in 1918 the public system of education in Palestine was essentially that first established by the Turkish law of 1869. From 1918, when the British Occupation of Palestine began, to 1920, when the Civil Administration was set up, the quasi-military Government began the work of educational reconstruction. Schools that have existed before were re-opened in the larger towns, training-colleges for men and women were instituted in Jerusalem, and Arabic was made the medium of instruction of Government schools. In 1919 the Military Administration voted £E.53,000 for the education budget, which was increased in the financial year 1920-1921, the first year of Civil Government, to £E.78,000.

95. In addition to the foreign missionery schools, many of which closed during the war, and were later re-opened, a number of new Arab and Jewish schools have been opened since 1920 by various agencies other than that of Government.

96. Since 1920 a dual system of national education has gradually developed, formed on a linguistic and racial basis, Arab and Hebrew. Into one or other of these systems, all schools, except some of those maintained by foreign bodies, naturally fall. The Arab system includes all schools where Arabic is wholly or chiefly the medium of instruction, while the Hebrew system includes all schools where Hebrew is the language of instruction.

These two systems are further divided into Public and non-Public schools. The public schools comprise Government schools on the Arab side and on the Jewish side, the schools administered by the General Council of the Jewish Community of Palestine (Va'ad Leumi) subject to the inspection and control of Government. The non-Public schools are classified according to their religious denomination:— Moslem, Christian and Jewish. The Christian Arab schools include all those maintained by Missionary bodies.

97. Education in Palestine is not compulsory and is by no means universal, but schools and teachers are required by law to be registered. In 1940/41 there were 1,491 schools, 7,483 teachers and 177,864 pupils.

*) By the same Ordinance the minimum paid up capital of foreign banks was fixed at £. 100,000 or the equivalent thereof; while all banks are required to pay Government an annual fee of £P. 100.

**) One in August, 1938, one in January, 1939, one in February, 1939, and one in November, 1940.

Almost 100% of the children in the Jewish and Christian communities are believed to receive education of some kind or other though the period of it may be short. In the Moslem community the extent of education is considerably less, particularly in villages and among girls.

98. In 1940-41 there were 403 Government schools under the Arab public system of education with 54,645 pupils, the great majority of whom were Moslems.

There is a demand for education of Moslem girls, and 60 Government schools now provide facilities for their education, handicrafts and domestic science being the principal subjects taught. 14,172 Moslem girls attended schools during the year under review.

99. Law classes are held in Jerusalem. There were 187 students during the year 1941-42, of whom 11 were licensed.

100. There were also 191 private Moslem schools, mostly of the 'Kuttab' type (religious), with 15,505 pupils.

101. The Hebrew public school system or the Va'ad Leumi consisted in 1940-41 of 413 schools with 59,163 pupils. These included 21 secondary schools with 6,554 pupils, 6 teachers' training colleges with 803 students and 6 trade and vocational schools with 684 pupils.

102. There were also in 1940-41 298 Jewish private schools with 23,892 pupils. The Hebrew Technical Institute at Haifa was attended by 388 students.

103. The various Christian communities supervise schools of their respective churches and provide to a very large extent for the education of their children. During the year under review these numbered 186, with 24,659 pupils. The 3 agricultural schools had 77 pupils.

104. Through the bequest of the late Sir Ellis Kadoorie, Government established two agricultural schools, one for Arabs at Tulkarm, the other for Jews at Mount Tabor; the former was closed during 1940/41, the latter had 46 pupils.

105. The total expenditure by the Department of Education and by the Public Works Department on schools of the Arab public system in the financial year 1940/41 amounted to £P.236,793.

106. The total expenditure on all schools of the Hebrew public system in the financial year 1940-41 was estimated at roughly £P.400,000, of which £P.46,000 was provided by Government.

107. The Hebrew University on Mount Scopus, Jerusalem, was inaugurated on April 1, 1925, and had (1940-41) 132 teachers and 1,106 students (264 women). The new library building houses some 366,000 volumes. The estimated expenditure of the university in 1940-41 was £P.192,000 approximately.

JUSTICE.

108. The courts in Palestine are either civil or religious courts. The former have jurisdiction over all matters save those of personal status and Waqfs or charitable endowments, subject to the provisions mentioned below.

109. There is a Magistrate's Court in each sub-district, and in the larger towns such as Jerusalem, Jaffa, Haifa, Tel Aviv and Nablus, two or more such courts.

110. There are five District Courts, each composed of a British President or Relieving President and two Palestinian Judges sitting at Jerusalem, Jaffa, Haifa, Tel Aviv and Nablus respectively. They go on circuit within the area of their jurisdiction. A District Court has jurisdiction in first instance over all crimes except those punishable with death, and civil cases outside the jurisdiction of a

magistrate in and for that district; it also hears appeals, subject to certain restrictions, from the decisions of magistrates both in civil and in criminal cases. Crimes punishable with death are tried by the Court of Criminal Assize, which consists of the Chief Justice or British Judge of the Supreme Court sitting with the President or Relieving President and a Palestinian Judge of the District Court. The accused may elect to be tried by a British Judge of the Supreme Court sitting alone.

111. The Supreme Court of Palestine is composed of the Chief Justice and three other British Judges and four Palestinian Judges.

112. The Court of Appeal is composed of two Judges, but the Chief Justice may by warrant under his hand constitute a court of either three or five Judges, while the High Court may not sit with less than two Judges. In each capacity a British Judge presides.

113. Benches of honorary magistrates have been established in certain towns to try contraventions for which the maximum penalty does not exceed £P.5 fine or 15 days imprisonment or both penalties.

114. Special arrangements exist in the Beersheba sub-district, where minor cases are disposed of according to tribal custom by the Court of Sheikhs. An appeal lies from this court to the Tribal Court of Appeal, which is constituted of the District Officer of Beersheba as President and two sheikhs, chosen by the District Officer, who have not sat in the Tribal Court as members.

115. All matters of personal status effecting Moslems are within the jurisdiction of the Sharia Courts. A Sharia Court consists of a Qadi, and appeals from his decision lie to the Moslem Court of Appeal, which is composed of a President and two members.

116. Jewish Religious Courts have exclusive jurisdiction in certain matters of personal status of Palestinian Jews, and jurisdiction by consent with regard to other nationals except in matters of dissolution of marriage. An appeal from the decision of the Jewish Religious Courts lies to the Rabbinical Council.

117. The different Christian communities (such as the Orthodox and the Latin), have similar jurisdiction to that of the Jewish Courts. They also have jurisdiction to hear and determine appeals lawfully brought under the law of any country other than Palestine, whether the parties to the appeal are Palestinian citizens or foreigners.

118. The Juvenile Offenders Ordinance came into operation in 1938. In 1941, 1,988 cases of young offenders were dealt with by the courts, of whom 1,600 were Moslems, 298 were Jews, and 90 were Christians. In 1941, 180 boys were sent to the Government Reformatory School and 319 placed on probation for periods ranging from 1 to 3 years.

119. Questions as to whether a case is one of personal status within the exclusive jurisdiction of a Religious Court shall be referred to a Special Tribunal composed of two British Judges of the Supreme Court and the President of the highest court of the religious community concerned in Palestine.

120. The Ottoman Code was superseded by the new Criminal Code, based on English law, which came into force on January 1, 1937.

The police establishment at December 31st, 1941, was:—

Palestinian Police:	Officers, 108, other ranks, 2693.
British Police:	Officers, 224, other ranks, 2983.
Prisons:	Officers, 22, other ranks, 495.

3,209 heinous crimes were registered in 1941 and 8 death sentences were carried out.

WEIGHTS AND MEASURES.

The metric system is followed by the Government, and its use regulated by Ordinance, but the local weights and measures are still commonly employed. Some of those generally used, with their equivalents in Metric and Britsh weights and measures, are as follows:—

(a) Length and Surface.

1 dra' or pic (cloth measure)	= 67.75 cm.	= 26.67 in.
1 dra' or pic (building and land measure)	= 75.80 cm.	= 29.84 in.
1 dunum* (Turkish) = 1600 sq. pics	= 919.3 sq.m.	= .22717 acres.

(b) Weight.

i. *used in all Palestine.*

1 dram (dirhem)	= 3.205 grm.	= 44.459 grains
1 okka = 400 dirhems	= 1.282 kgm.	= 2.827 lbs.

ii. *used in Southern Palestine.*

1 oqia = 75 dirhems	= 0.240 kgm.	= 0.530 lbs.
1 rotl = 12 oqias	= 2.884 kgm.	= 6.359 lbs.
1 kantar = 100 rotls	= 288.400 kgm.	= 635.900 lbs.

iii. *used in Northern Palestine.*

1 oqia = $66\frac{2}{3}$ dirhems	= 0.214 kgm.	= 0.471 lbs.
1 rotl = 12 oqias	= 2.564 kgm.	= 5.653 lbs.
1 kantar = 100 rotls	= 256.400 kgm.	= 565.300 lbs.

*) The metric dunum used by Government is equivalent to 1,000 sq. metres or one-tenth of a hectare.

GEOGRAPHICAL FEATURES.

Position:—Palestine lies between Latitude (North) 29° 30′ and 33° 15′ and between Longitude (East of Greenwich) 34° 15′ and 35° 40′.

Land and Water Area:—

DISTRICT	TOTAL AREA		LAND AREA		WATER AREA	
	Sq. Km.	Sq. Miles	Sq. Km.	Sq. Miles	Sq. Km.	Sq. Miles
Gaza-Beersheba	13,813	5,333	13,688	5,285	125	48
Lydda	1,205	465	1,205	465	—	—
Jerusalem	4,732	1,828	4,332	1,673	400	155
Samaria	3,271	1,263	3,271	1,263	—	—
Haifa	1,019	393	1,919	393	—	—
Galilee-Acre	2,969	1,147	2,790	1,078	179	69
Total	27,009	10,429	26,305	10,157	704	272

Mountains (Height above mean sea level):—

Jebel Jermaq	1,208 m. (3,963 ft.)	Mount Ebal	940 m. (3,084 ft.)
Jebel Heider	1,047 m. (3,435 ft.)	Mount Gerizim	881 m. (2,890 ft.)
Tel 'Asur	1,016 m. (3,333 ft.)	Mount of Olives	
Jebel 'Adathir	1,006 m. (3,301 ft.)	(Jebel et Tur)	826 m. (2,710 ft.)
		Mount Tabor	562 m. (1,844 ft.)

Lakes:—

	APPROXIMATE AREA.		APPROXIMATE LEVEL.
	Sq. Km.	Sq. Miles	
Lake Hula (Waters of Meiron)	14	5	70 m. (230 ft.) above m.s.l.
Lake of Tiberias (Sea of Galilee)	165	64	209 m. (686 ft.) below m.s.l.
Dead Sea (only half in Palestine)	1,050	405	392 m. (1286 ft.) below m.s.l.

Rivers:—Jordan, length from source to the Dead Sea 252 km. (157 miles)—consisting of 14 km. (9 miles) north of lake Hula, 5 km. (3 miles) through lake Hula, 18 km. (11 miles) from lake Hula to lake Tiberias, 21 km. (13 miles) through lake Tiberias, and 194 km. (121 miles) from lake Tiberias to the Dead Sea.

Yarmuk, length 40 km. (25 miles) of which only 17 km. (10 miles) in Palestine.

Nahal Qishon (Nahr el Muqatta), 13 km. (8 miles).

Nahar el 'Auja (Mei hay Yarqon), 26 km. (16 miles).

Harbours:—Haifa, Jaffa—Tel Aviv, Gaza and Acre.

STATISTICAL SUMMARY OF THE PROGRESS OF PALESTINE.

*) The sub-district areas in 1922 and 1931 are taken from the Census of Palestine, 1931. The changes in area between 1922 and 1931 are mainly due to the rectification of frontier with Syria and Trans-Jordan, increasing the total land area, the land area of the Galilee-Acre District, and the areas of the Acre, Safad and Tiberias Sub-districts; on the other hand, the area of the Beisan Sub-district was reduced as a consequence of a rectification of frontier with Trans-Jordan.

† Revised land area (Source: Commissioner of Lands and Surveys, 1940).

Table 6 — Total Population of Palestine at the Censuses of 1922 and 1931, and Estimated Total Population as at 31st December in each of the Years 1931—41, by Religions.

(Exclusive of Members of His Majesty's Forces).

(*) The census figure for this group indicates persons gainfully occupied in a variety of miscellaneous industries and occupation not included under other headings. The migration figures are dominated by the general labourers. These labourers will be, on absorption, distributed over many of the industries classified (under other heads), but clearly only a small proportion will be associated with the industries covered by this group of the census classification. A comparison of the figures of immigration with those of 1931 census would therefore be misleading. The distribution of the general labourers among the manufacturing and construction industries would raise the percentages given. For instance a number of labourers must have been absorbed into the building industry, a number that might be anything up to three times the immigration figure given for that industry.

(†) Public officers, etc., in the classification of immigrants in 1932 were included under the head of clerical service. The correct allocation would raise the total of the public officers group by (perhaps) as much as one per cent. and lower that of the previous group by (perhaps) one half per cent.

*The "year of Crop" is the year in which the tobacco is planted. Thus the crop of 1935 represents tobacco planted in 1935 and registered in 1936.

†The cultivation of heisheh is permitted in the Beersheba district only and is uncontrolled. Crops of heisheh are therefore not registered.

No records of plantation were taken for the year 1925 as plantation for that year had commenced before the promulgation of the Tobacco Ordinance in May 1925. The total crop, including tobacco, tombac and heisheh for 1925, was 678,179 kilos

Part V (Contd.).

Table 39 — Area in Dunums under Citrus Plantations and Age of Trees, 1922—41.

(NOTE:— Citrus trees are considered to become fruit-bearing in the fourth year)

Table 46 — Summary by Kind of Animals, 1934 and 1937.

Kind of Animal	1934 Number	1934 Total	1937 Number	1937 Total
Horses, Mules, Donkeys & Camels		131,653		149,332
Horses		16,355		20,053
Colts	756		1,220	
Fillies	1,047		1,544	
Stallions	5,185		5,587	
Mares	8,489		10,282	
Geldings	878		1,420	
Mules		7,481		8,989
Foals under 1 year	286		380	
Mules	7,195		8,609	
Donkeys		75,784		92,205
Foals, under 1 year:				
male	4,721		6,969	
female	8,000		10,849	
Stallions	25,078		29,164	
Mares	36,946		43,530	
Geldings	1,039		1,693	
Camels		32,033		28,085
Foals	1,895		22,369	
Male	24,998		3,951	
Female	5,140		1,765	
Cattle & Buffaloes		135,344		175,209
Cattle		130,804		169,145
Bulls castrated	29,416		29,756	
Bulls uncastrated	7,172		7,044	
Cows and heifers	63,886		97,375	
Calves, under 1 year:				
male	12,948		17,205	
female	17,382		17,765	
Buffaloes		4,540		6,064
Male	1,175		1,286	
Female	2,422		2,172	
Calves, under 1 year:				
male	396		1,072	
female	547		1,534	
Sheep and Goats		568,778		570,846
Sheep		188,267		209,422
Male castrated	561		2,220	
Male uncastrated	9,022		17,557	
Female	147,652		158,061	
Lambs under 1 year	31,032		31,584	
Goats		380,511		361,424
Male castrated	3,760		6,132	
Male uncastrated	13,710		17,906	
Female	304,513		283,278	
Kids under 1 year	58,528		54,108	
Poultry		1,510,518		2,660,092
Fowls (cocks, hens and chickens)	1,372,718		2,455,949	
Ducks	6,240		12,155	
Geese	3,377		6,034	
Turkeys	4,928		6,382	
Pigeons	123,255		179,572	

Table 47 — Animals Slaughtered in Local Authorities' Areas, 1933—1941.

Year	Cattle	Sheep	Goats	Camels	Pigs	Total

X. FOREIGN TRADE.

Table 55 — Value of Imports, Exports and Re-exports, by Main Classes, Calendar Years 1927—1941.

NOTE. — Prior to 1937, imports under classes I, II and III did not include figures for imports by institutions exempted from import duty. Imports by the said institutions during the said period were entered under class IV, "Miscellaneous and unclassified". Imports under classes I, II and III during 1937 included imports by all institutions exempted from import duty, while imports under the said classes during 1938—1941 included imports by the said institutions except Military and N. A. A. F. I. stores. Class IV in 1937—1941 comprises only living animals not for food.

* The 1940 and 1941 exports statistics exclude petroleum products, Dead Sea chemicals and certain other commodities.
y Withheld from publication.

Table 58 — Quantity and Value of Principal Articles Imported, 1937—1941.

NOTE.—In 1937 imports by all institutions entitled to exemption from import duties were itemised as far as possible and included in the general figures shown for each appropriate item. After 1937 Military and N.A.A.F.I. stores were excluded from the itemised accounts and also from the totals; but imports by other institutions entitled to exemption continue to be included in both of them.

Total Class IV			58,077 [f]		30,684 [f]		33,671 [f]		15,229 [f]		195,085 [f]
Grand Total			15,903,666		11,356,963 [i]		14,632,822 [i]		11,035,454 [i]		12,038,280 [i]

(f) In 1937—1941 Class IV comprises only living animals not for food.
(g) Chemical fertilizers and used personal effects previous to 1937 fell in Class IV, while in 1937—1941 fell in Class III. The 1937—1941 figures are given here only for purposes of comparison.
(h) The figures for 1937—1939 are given only for purposes of comparison with earlier years. Imports as Government stores and Iraq Petroleum Company stores during 1937—1941 were distributed under the appropriate items of the trade statistics. Imports as Military and N. A. A. F. I. stores, however, were included under the appropriate items of the 1937 imports statistics, but were excluded from the 1938—1941 imports statistics.
(i) Imports during 1938–1941 exclude Military and N. A. A. F. I. stores. The 1940 and 1941 imports statistics, moreover, exclude petroleum products and certain other commodities.
(x) Withheld from publication.

Part X (Contd.).

Table 61 — Value of Imports of Merchandise for Consumption, by Countries of Consignment, 1927—1933, and by Countries of Origin, 1934—1941.

Note.—The users of this table are cautioned that imports from any particular country during any of the years in which imports statistics are given by countries of consignment, viz. 1927—1933 are not comparable with imports from the same country during any of the years in which the imports statistics are given by countries of origin, viz. 1934—1941. Imports from the United Kingdom and Egypt show striking examples of this incomparability. A considerable part of goods made in England and imported into Palestine during 1927—1933 were consigned from Egypt and therefore were accredited to this latter country.

Imports statistics, by countries, included figures for Military and N.A.A.F.I. stores up to the end of 1937 but excluded figures for these stores as from beginning of 1938. The 1940 and 1941 statistics, moreover exclude petroleum products and certain other commodities.

1937	ALL AIRPORTS	*	1,912	2,229	*	*	12,336	10,417

(*) No information available.
(1) Number of landings, including aircraft arriving from an airport in Palestine and excluding trial flights.
(2) Passport control records. Passengers arrived at or left from Tel Aviv passed the passport control at Haifa Airport or at Lydda Airport.
(3) March to December.
(4) Operated as an airport for civil aviation until the end of March, 1939.

Part XI (Contd.).

(c) PALESTINE RAILWAYS AND OPERATED LINES SYSTEM.

The hours of work vary according to season. The rates shown in respect of Jewish labour in the citrus belt, are based on eight hours' work.

Explanation of signs: — denotes "Not applicable".
+ denotes "Employment scarce".
* denotes "No information available".
x) M—adult Males; F—adult Females; Ch—Children.

Part XII (Contd.).

Table 85 — Union Scale of Daily Wage Rates, as recorded at the end of March, 1942.

(Daily wage rates prevailing in manufacturing industries and construction in Jerusalem, Tel Aviv and Haifa at the end of March, 1942; based on eight hours' work a day; data communicated by the General Federation of Jewish Labour).

NOTE:—In some industries separate accounts are kept of the ordinary wage payments (thereunder defined as the BASIC daily wage rates) and of the payments of the cost of living allowances; in other industries the cost of living allowances are included in the basic wage rates.

In this table the columns headed "A" show the basic daily wage rates, and the columns headed "B" show the cost of living allowances, expressed as a percentage of the basic wage rates, or indicate that the cost of living allowances have been included in the integrated basic wage rates.

No account is taken of any changes in the wage rates which may have been agreed upon after the 31st March, 1942, and made retroactive.

Unless otherwise indicated, the rates shown in this table relate to adult male workers.

The abbreviation "C.L.A." denotes Cost of Living Allowances.

(1) In Jerusalem the cost of living allowance payable in most printing presses ranges from 17½% to 22½% according to salary; in one printing press the allowance ranges from 22½% to 30%. In Tel Aviv the cost of living allowance payable in commercial work is 22½% of the basic rate; in newspapers the allowance ranges from 15% to 25% according to salary.

(2) In view of the small number of printing workers in Haifa, no information on the basic wage rates has been collected.

(*) The calculation of the basic rates is based on the assumption of an equal number of working hours for all workers; the calculation of "gross hourly earnings" is based on actual employment. (†) Included in gross hourly earnings.

Part XII (Contd.).

Table 87 — Daily Rates of Wages in Government Employment, as recorded at the end of September, 1940 and 1941.

The wage rates shown in Table 87 relate to labour employed by Government departments directly and not to labour employed by private contractors working for Government undertakings. Both the range of wage rates and the average daily rates have been adjusted for the compensatory allowance where such allowances have been granted.

The daily wage rates paid in Public Works have been extracted from returns supplied in respect of various districts and represent minimum, maximum and average wage rates taking the country as whole.

It should be borne in mind that the occupations and skill of the workers employed in Public Works vary according to the nature of the work in progress at the time of the inquiry. In some cases there is probably a not inconsiderable difference in the nature of work performed by the members of the same occupations in Public Works and on Railways. Occupations insufficiently represented in the returns have not been included.

In the original returns relating both to Public Works and Railways the daily wage rates were recorded on a frequency table with a class interval of 50 mils. It is, therefore, not improbable that the actual minimum rates are in some cases slightly higher while the actual maximum rates are in many cases slightly lower than shown in the table. The average wage rates are believed to have been little affected by these deviations. These deviations cannot, however, exceed 49 mils in the minimum and maximum rates and 25 mils in the average rates.

The daily hours of work in construction vary from eight to nine. The wage rates of the workers on the Railways are based on eight hours' work a day.

(a) Minimum and maximum rates of wages according to scale not including exceptionally low or high rates.

(b) The predominant daily wage rates ranged between 250 and 375 mils in 1940, between 300 and 400 mils in 1941.

(c) The predominant daily wage rates ranged between 100 and 150 mils.

(d) The predominant daily wage rates ranged between 150 and 200 mils.

(e) The predominant daily wage rates ranged between 350 and 450 mils.

(f) The predominant daily wage rates ranged between 100 and 340 mils.

(g) The Predominant daily wage rates ranged between 100 and 140 mils.

(h) The predominant daily wage rates ranged between 350 and 500 mils.

(i) The predominant daily wage rates ranged between 350 and 440 mils.

(j) The predominant daily wage rates employed in one district only.

(k) The rates shown relate to a party of workers employed in public works there is a class of labourers known as 'skilled' who, however, cannot be described as skilled in any particular occupation but have more experience in construction and road building than the ordinary unskilled labourers. An Arab 'skilled' labourer's wage rate ranged in September, 1941, from 150 to 250 mils, on the average 188 mils. A Jewish 'skilled' labourer's wage rate ranged from 250 to 300 mils, on the average 275 mils. Fifty mils is the lower limit of the scale referred to in the head-note.

(l) The rates shown relate to unskilled labourers. In public works there is a class of labourers who are employed in temporary employment at rates lower than those of the permanent workers.

(m) The average wage rate affected by the presence of a party of workers in temporary employment

1938—39	406	2,374	25,725	27,609	53,334
1939—40	419	2,517	27,697	29,203	56,900
1940—41	413	2,649	29,140	30,023	59,163

Note:—(*a*) The figures for the school years 1920-1925 have been supplied by the Jewish Department of Education. The distribution of the pupils by sex is not given.

(*b*) The average number of pupils per teacher is not calculated, as many of the teachers are part-time only.

Part XV (Contd.).

(a) Durrah and maize.
(b) Including also damask and gobelin.
(c) Imports of flour are expressed in terms of wheat at a ratio 80 : 100.
(d) Including imports from Trans-Jordan
(*) Figures of Kerosene have not been published.

Part XVIII (Contd.).

Table 178 — Categories of Lands under the Rural Property Tax Ordinance, No. 1 of 1935.

NOTES:- Table describes the total area of land which comes under the Rural Property Tax Ordinance, No. 1 of 1935, i.e. the whole of Palestine with the exception of Beersheba Sub-District, the Hula Concession Area in the Safad Sub-District, and the urban areas. The categories of land defined by the Ordinance are as shown in the following Table: —

Category	Description of land	Rate of Tax	Area as at 1.4.38
		Mils per dunum	Dunums
1	Citrus (excluding Acre Sub-District)	400	267,369
2	Citrus (Acre Sub-District)	40	8,346
3	Bananas	560	3,947
4	Village built-on-area or reserved therefor	160	76,399
5	1st Grade irrigated land and 1st Grade fruit plantation	40	4,490
6	2nd Grade irrigated land and 2nd Grade fruit plantation.	35	220,966
7	3rd Grade irrigated land and 3rd Grade fruit plantation.	30	594,149
8	1st Grade ground crop land, 4th Grade irrigated land and 4th Grade fruit plantation.	25	315,559
9	2nd Grade ground crop land, 5th Grade irrigated land and 5th Grade fruit plantation.	20	222,701
10	3rd Grade ground crop land, 6th Grade irrigated land and 6th Grade fruit plantation.	18	845,037
11	4th Grade ground crop land, 7th Grade irrigated land and 7th Grade fruit plantation.	15	736,924
12	5th Grade ground crop land, 8th Grade irrigated land and 8th Grade fruit plantation.	12	977,713
13	6th Grade ground crop land, 9th Grade irrigated land and 9th Grade fruit plantation.	8	1,878,768
14	7th Grade ground crop land, 10th Grade irrigated land.	Nil.	744,244
15	8th Grade ground crop land.	Nil.	214,970
16	16A Forests planted and indigenous and uncultivated land.		6,384,760
	16B Roads, Railways, Rivers and Lakes.	Nil.	84,549
	TOTAL	—	13,580,891

1 metric dunum = 1,000 square metres.

Part XVIII (Contd.).
Table 179 — Number of Villages in each Sub-district of Palestine, (not including Beersheba Sub-district), and Area of Village land in Metric Dunums, according to Ownership by Jews and Others, and divided into Classes (according to Groups of Rural Property Tax Categories), 1938—1939.

DISTRICT and SUB-DISTRICT	No. of Villages	All village land (Categories (1)-(16)): Total	Owned by Jews	Owned by Others	Citrus (Categories (1)-(2)).	Bananas (Category (3)). (*) Not including Roads, Railways, Rivers, and Lakes.
(**) Not including citrus in urban areas or in built-on areas.

NOTES:- (1) Includes areas of built-on area and Hula Concession Area to which the Rural Property Tax Ordinance is not applicable.
(2) The classification of categories (5)—(8) as plantation area and of categories (9)—(13) as taxable cereal land is not therefore precise, but is a convenien approximation.

Part XVIII (Contd.).

(‡) The value of land includes the value of improvements, e. g. buildings, etc.

(*) + and — signs are to be interpreted in the sense that they imply net gains and losses, respectively, in land and money.

(§) The balance of land sold by Non-Jews and retained by Jews from October, 1920 to December, 1941, was 807,222 dunums. The land in possession of Jews prior to the date of the occupation is estimated at about 650,000 dunums.

Part XVIII (Concld.).
