FOREWORD

Forty two-years have passed and the blessed tree planted by our former noble President, the late Selim Jambart, is yielding its useful fruit.

The Aleppo Chamber of Commerce has felt the necessity of issuing an economic Bulletin in English, similar to the one in Arabic, to provide foreigners with data and statistics about local and foreign trade of the Northern Region, Syria, U.A.R. , and about financial situation, circulation of currency, price of commodities, development plans, national income and to give a summary about the economy of our Republic.

The Aleppo Chamber of Commerce is forwarding this Economic Bulletin in English, for the first time, to most foreign countries of the World which have strong commercial and friendly relations with our Republic. This Bulletin will be available at every national library, embassy, consulate, commercial attaché office throughout the World as well as in Arab and foreign institutes.

Our Chamber hopes that this Bulletin will be welcomed by them all.

No doubt that this first issue in English is not fully perfect, and may not realize all the purposes aimed at. However, the Aleppo Chamber of Commerce hopes that - with time - its Bulletin will approach perfection so that the English edition will realize its aims in serving the Syrian and the Aleppo trade in particular, and our young Republic in general.

The Aleppo Chamber also hopes that this English edition will be a messenger of promotion and prosperity sincerely desired by our Government, in accordance with the programs of reforms and development

planned by our beloved leader, His Excellency President Jamal Abdul Nasser.

In publishing this Bulletin, Aleppo Chamber of Commerce depends on the help of God, and on the support of the Government departments and on its members and friends.

Aleppo, Syria, September 30th, 1960

Mohamad Said El-Zaim
Second President
Aleppo Chamber of Commerce

FOREWORD

Aleppo Chamber of Commerce

ALEPPO Chamber of Commerce

The Aleppo Chamber of Commerce was founded by the end of the 19th century, during the Ottoman Regime. At that time it was located in Khan Alabieh, later it moved to Khan Banadka, and since 1933 it has been located in the new building, the photo of which is on the opposite page.

This Chamber is considered to be the most ancient chamber in the Arab countries.

Its present location is in Moutanabbi street along which most banks are located and is right in the business center of Aleppo.

Business men registered at this Chamber are classified in the following 5 categories :

- SELECTED CLASS : Most banks and important societies
- FIRST & SECOND Classes : Most important firms
- THIRD & FOURTH » : According to their importance.

The number of registered firms and business men is a follows :

SELECTED CLASS	20
FIRST »	48
SECOND »	79
THIRD »	358
FOURTH »	1,158

Registration at the Chamber of Commerce is not compulsory.

The Chamber publishes 4 quarterly Bulletins, one every 3 months, in Arabic. It also publishes one Bulletin in English at the end of the year. These Bulletins contain the most important statistics concerning business in the Syrian Region, imports and exports, and many other information of interest to business men and firms.

Among the main tasks of this Chamber is to promote economy of the country, to strengthen foreign trade relations, to assist the Government in the economic field, to express wishes and views of business circles, to serve business men at all times, and to facilitate affairs of those concerned, in the country and abroad. The Chamber endeavours to be a faithful medium between foreign and native business men, to help settle their problems and disputes, and to provide them with all available information asked for.

The Chamber is open all days of the week, except Friday.

Its postal address : Chamber of Commerce, Aleppo, Syria, U.A.R.

Its cable » : Chamber of Commerce, Aleppo.

Its phone numbers : 14236 & 14237.

ALEPPO

Through the Ages

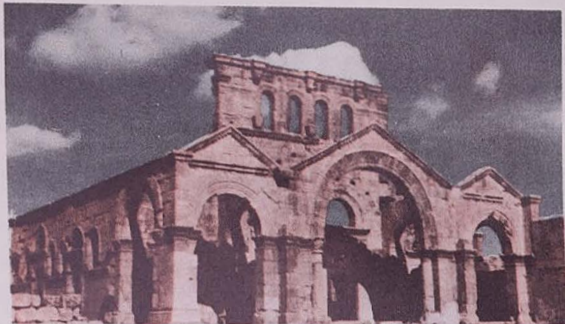

Aleppo, a city with a fascinating past, and a city which grows more beautiful and attractive, can well claim to be the oldest continuously inhabited city in the World. It is a city which has kept its oriental charm intact. Its important ancient buildings comprise a treasury of ancient and Muslim arts.

It is situated in the northern part of Syria, and south of Turkey, at about 80 miles from the river Euphrates, and 150 miles from the port of Lattakiah, on the Mediterranean sea.

Aleppo has been known as «HALEB» since 3.000 B.C. It would be difficult to say something about its origin, for little has reached us about the old cities of the World. An ancient tradition says that when Abraham left Ur and came to Harran, and then to Aleppo on his way to the country of Canaan (Palestine) he stayed for sometime on one of its hills, and that every morning he used to milk his fair-haired cow and give some of its milk to the neighbouring people who were astonished to see

a cow so fair and nice. Afterwards those people built a town around that hill and called it «Halab el-Shahbaa», e.i. he milked the fair cow. But this is only tradition, for Abraham passed through Aleppo at about 2.000 B.C.

Aleppo is ideally situated to act as a base for a number of trips to nearby sites. Among the most famous attractions with a short distance of the city are Resafa, the city of marble, al Bara, Apamea, Cyrrhus, Qal'at Nedjme, and many others.

Kal'at Sam'an, a fifth-century ruin, sixty kilometers from Aleppo, comprises the most important antiquity in North Syria. Here one may contemplate the remains of a cruciform-style basilica of St. Simeon Stylites, built to honor this famous ascetic who lived for forty years atop a column and died there 1.500 years ago, in 459.

It has been conquered and occupied by many armies and nations, the Sumerians, the Hittites, the Assyrians, the Mitanians, the Romans, the Greeks, Pharaohs of Egypt, and others.

In 332 B.C. Alexander the Great conquered it and after his death Seleucus Nicator restored its previous importance and called it «Bereoea». In 65 B.C. The Romans extended their empire to the Near-East and occupied Syria, which knew then calm and prosperity.

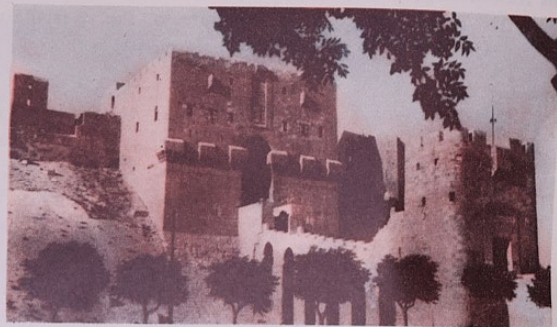

In 633 A.D. Syria was in the hands of the Mohamadan armies. Prosperity was then enjoyed by everybody under the Ayoubites but in 756 A.D. the Abbassides made of Syria a secondary country. Some greedy

Madrasa HALAWYA (5th century)

Turks began to take advantage of this state of affairs and became the masters of some important towns. Seif Eddine el-Hamdani, prince of Mossul, drove them out and made himself its ruler. Under its rule, Aleppo knew a periode of prosperity, science and construction. He was a patron of arts, and had always poets around. Nicephore the Greek attached Aleppo but

failed to capture its citadel. A large part of the town was destroyed, many inhabitants killed or taken prisoners. So Seif Eddine brought by force some of the inhabitants of Caesarrea, and made them live in Aleppo to replace those people who were killed or taken prisoners.

The Citadel Entrance

The lofty, romantic silhouette of the Citadel reigns supreme over the whole of the city of Aleppo. Throughout countless centuries, this monument has acted as symbolic (and, in many cases, practical) defender of Aleppo against all threats to its security. The low natural hill on which it stands has grown with the accumulation of the debris of many ancient civilizations.

The first fortress was built on this site before recorded history. The present structure is a magnificent example of Arab military architecture, built with an eye to a certain kind of threatening beauty, but primarily to defy all would-be conquerors and to remain glorious and invincible.

In 1098, the Crusaders came and attacked Aleppo many a time. The inhabitants appealed for help to the king of Mossul, prince Omad Eddine Zanki, who came with his army, and drove away the Crusaders. After his death, his son, prince Nour Eddine, defeated the Crusaders many times, freed Orfa, and made Renaud de Chantillon and Guslin prisoners.

Mihrab of Madrasa Halawya
(12th century)

The Minaret of the Great Mosque
(11th Century)

Afterwards Salah Eddine El-Ayoubi occupied Aleppo, and his son Malek Ezzaghir Ghazi became the ruler of the region. Many buildings were built in the town and in the Citadel. In 1240 A. D. the Moguls came and attacked Syria. Holako, the Conqueror of Bagdad, attacked Aleppo, burnt down its places of worship, but failed to occupy its Citadel.

After he had promised peace to its inhabitants and the safe-keeping of the Citadel if they surrounded, he did not keep his promise: He destroyed the Citadel and slaughtered most of its inhabitants.

The old quarters of Aleppo keep intact all their medieval charm. A visitor may wander for days in these quarters, constantly discovering some previously unnoticed attractive architectural detail.

Aleppo is famous for its lovely, comfortable, old houses. They are built in the oriental style with carved-wood ceilings of different colors, marble fountains, artificial waterfalls, and gardens which attract and hold one's attention and admiration.

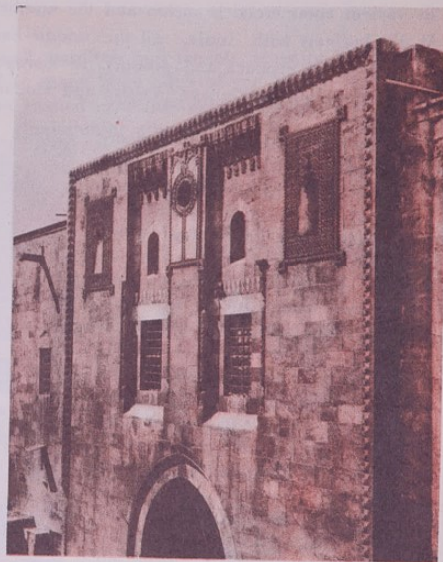

After all those disturbances and defeats, Aleppo sees the Mohamedan armies defeat the Moguls, and king Ashraf rebuilt the town and the Citadel. But in 1491 the Moguls came back with their leader, Tamerlane

who destroyed the town. Then the Ottomans - the Turks - conquer Aleppo and the whole of Syria. In the XVII century, Aleppo becomes the most important town in the Near-East. In 1841, the Egyptian army under the leadership of Ibrahim Pasha conquered Aleppo for only a short time.

During the first World-War - 1914-1918 - the English-Arab armies free Syria and Aleppo from the Turkish rule. Then the French occupy Syria and Aleppo till 1945. The year Syria obtained its complete independence. In 1958, Unity between Syria and Egypt was proclaimed and since then

Syria has been known as the «Northern Region or Province of the U.A.R.».

Aleppo, the center of a flourishing past and the town of a bright future was, in past ages, the land of agricultural bounty. Its plains and hills were then covered with dense forests, and had a system of water canals as blood veins in the human body. Its climate is dry and healthy. Rakka, Rassafa and Membej were the summer resorts of the Califs and places of rest for the Princes. An English explorer, who visited Aleppo and its region, says that he found the remains of 42 cities, and that these remains are a tangible proof of its importance and its ancientness.

Khan el-Wazir Entrance (17th century)

Aleppo was the crossroad of trade between East and West, and before the discovery of the Cape of Good Hope, and the opening of the Suez Canal, no other eastern city could have rivalled with Aleppo in its various commercial branches and the number of its business firms. It did business with India, all the middle-East, Persia, etc. . . and exported their produce and products to Europe, and imported various goods from Europe, Geneva, Venice and Holland.

In the begining of 1900, many people emigrated to America, Egypt, and other countries, seeking work and gain. Nearly every country on earth has some Aleppeans doing business or working there, and an ancient proverb says « Even lame Aleppeans reach India ». Most Aleppo emigrants are prosperous and hold a certain high social position. When Syria became an independant country, it began to look for new markets, to improve its ways of doing business, and to enlarge the quantity of its exports. The plains surrounding Aleppo were cultivated and watered, and crops began to be the sources of new fortunes. Cotten, cereals, soap-casings, liquorice roots, olive oil, nuts, dried fruits are now well-known every where. Petroleum wells have and are being drilled, and another source of riches is adding itslef to many other sources of prosperity and comfort for the Syrian people, and especially to Aleppo region.

Mihrab of Madrassa Firdos
(17th century)

Spinning and weaving of cotton and silk occupy many mills in Aleppo, Thousands of workers are being employed, and Aleppo is renowned, as it was in the past, for its cotton and silk stuffs or tissues.

Aleppo is about 360 kilometers from Damascens (224 miles). It iis over the sea-level by 390 meters. Its population is about half a million. Drinking water is obtained from the river Euphrates which is about 95 Kms from Aleppo.

The new city-hall, hospitals and schools, recently built, render the city of Aleppo equal to many large cities of the World. A new Electric power-house has been erected near the source of Ain el-Tel to supply power to the many ginning-mills around it.

The Strong Tyre

Conqueror of

DESERTS & ROADS

FISK

the Nylon

TYRE

FISK tyre is, as you have always known, the first in improvements among all other tyres

Strength, long service and excellent manufacturing are of its numerous characteristics.

The Motto of the nylon FISK tyre is :

NYLON FISK STRONGER THAN STEEL

The SYRIAN COTTON EXPORTED

according to SEASONS

We have shown in the two preceding pages the Superficies sown with cotton, the Quantities produced from ginned and unginned cotton, and in chapter One of the Summary of our Foreign Trade the Quantities which the Syrian Province has exported, as ginned cotton, in the years 1958-1959.

The following table shows the Quantities of ginned cotton exported according to Seasons and not to Years.

The Quantities exported in Tons.
SEASONS (From Sept. 1st to May 15th.)

Countries exported to	1957/58	1958/59	1959/60
Germany West	6,013	1,417	7,443
England	1,373	3,397	3,132
Austria	—	—	45
Belgium	113	1,048	2,584
Bulgaria	2,045	2,119	2,051
China	16,752	847	4,456
Cuba	—	175	—
Spain	—	11,655	—
France	21,953	24,872	25,250
Gaza	—	5	—
Greece	61	—	—
Holland	—	—	144
Hong Kong	310	—	1,268

Countries exported to	1957/58	1958/59	1959/60
Hungary	1.835	994	2.507
India	—	21	4.470
Italy	5.065	4.195	6.061
Japan	4.697	8.147	4.280
Lebanon	—	—	957
Poland	—	2.311	2.755
Rumania	2.766	906	4.520
Switzerland	32	22	534
Tchecoslovakia	5.272	4.524	3,711
U. S. S. R.	14.300	12.278	7,967
Yugoslavia	410	898	—
Transit Lebanon	5.109	2.109	—
Other countries	—	—	25
Total	88,901	82,328	84,967

It is useful to point out that the Syrian Province has an advantage that many other cotton-growing countries have not, and that is all cotton grown and produced in Syria is entirely exported or used locally, and that no quantity is left over.

EVOLUTION in the PRODUCTION of the most important agricultural produce in SYRIA 1950 - 1959

(Quantity in '000)

Year	Ginned cotton	Wheat	Barley	Lentils	Sorgho	Maize	Olives	Grapes
1950	35	830	322	27	76	36	19	245
1951	63	510	155	30	24	22	40	184
1952	45	900	467	51	106	23	33	167
1953	47	870	462	63	124	22	49	244
1954	80	965	635	58	114	24	36	257
1955	84	438	137	37	71	18	29	206
1956	93	1,052	462	75	75	15	78	194
1957	110	1,354	736	77	32	15	36	241
1958	93	565	228	36	50	11	65	198
1959	99	632	218	32	42	12	28	218

It is to be pointed out that - except for cotton which is an irrigated produce - all other agricultural produce have decreased in quantities owing to the scarcity of rain and dryness of earth during the last 2 years.

EVOLUTION in the SUPERFICIES

Producing most important agricultural produce

1950 - 1959

Superficies in thousands of Hectares

Year	Cotton	Wheat	Barley	Lentils	Sorgho	Maize	Olives	Grapes
1950	3,897	992	416	9	94	25	81	68
1951	3,364	1,037	344	16	71	16	80	67
1952	3,141	1,167	397	66	115	19	82	68
1953	3,087	1,314	438	71	97	18	86	70
1954	2,920	1,347	543	76	102	17	94	71
1955	2,881	1,463	614	77	70	13	98	71
1956	2,518	1,537	636	67	87	10	105	72
1957	2,560	1,490	813	93	70	10	109	69
1958	2,978	1,461	769	119	57	10	111	71
1959	5,060	1,422	727	84	58	9	111	68

We notice from the main table and that of the preceding page that superficies sown have increased during the past years, but production has decreased because of the scarcity of rain.

QUANTITY OF TOBACCO MANUFACTURES

REPORT
OF
The United States Trade Mission
TO THE
United Arab Republic

INTRODUCTION

The United States Trade Mission to the United Arab Republic submits this report on its findings and observations during a 7-week visit which ended on March 2, 1960 and involved numerous individual consultations with U.A.R. businessmen and Government officials, including the President of the U.A.R., President Gamal Abdel Nasser. The visit encompassed a comprehensive tour of Egypt and Syria, the Southern and Northern Regions respectively of the U.A.R., including visits to 10 cities as well as to numerous industrial plants, and offered an unparalleled opportunity for a first-hand appraisal of the commercial scene in that country. As a consequence of this visit, the first by an official United States Trade Mission to the United Arab Republic, the Mission feels that much has been learned of significance not only to the United States Government but also to the United States business community with relation to the present position of the United States trade, investment and tourism in that country. Similarly, it is believed that U.A.R. businessmen and Government officials alike have benefited from this visit with its opportunity for a full and frank discussion of trade problems and mutual trading interests with a representative group of American businessmen.

The Mission was impressed by what it saw in the United Arab Republic with respect to the program of the Government to improve the economy of the nation through intensive development efforts. It was

particularly impressed by the dynamic, progressive type of people engaged in the over-all direction of the Government and, through Government control, the over-all development of industry. Practically without exception, the Mission met a vigorously dedicated group of people determined that their goals will be realized and these goals in the most part appear reasonable and designed for the betterment of all of the people. The significance of achieving a material improvement in the well-being of the nearly 30 million peoples of the U.A.R. cannot be over-emphasized in terms of its impact, both industrially and politically, on the rest of the Arab world. Commercially speaking, a rise in the purchasing power of this entire bloc can be of considerable significance to the United States as well as the rest of the world.

The objectives of the U.S. Trade Mission were, briefly stated, to visit the U.A.R. for the purpose of meeting with as many businessmen and Government officials as possible to :

- 1) Discuss the present status of U.S. trade, investment and tourism in that country.
- 2) Explore problems affecting such activities to determine if solutions were available or could be recommended.
- 3) Learn as much as possible about business in the United Arab Republic of today - and plans of tomorrow - and report this to the business community of the United States.
- 4) Advise businessmen and Government officials alike of the willingness of U.S. firms to compete in this market and provide specific information with respect to the availability of U.S. goods and services.

In order to accomplish these objectives, the Mission included five successful American businessmen with widely diversified backgrounds and experience. They were chosen from five separate geographical areas in the United States. Trade Mission members were :

Mr. E. Paul Hawk, Director of the Trade Missions Program, Bureau of Foreign Commerce, U.S. Department of Commerce, Director of the Trade Mission ;

Mr. Charles J. Kelly, Director, Getz Bros and Company, San Francisco, California ;

Mr. William F. Huck, retired Vice-President, Bank of America, Los Angeles, California ;

Mr. James T. Chirurg, Advertising executive, Chairman of the Board, James Thomas Chirurg Company, Boston, Mass. ;

Mr. Wallace E. Carroll, President, American Gage and Machine Company, Chicago, Illinois ;

Mr. Thomas J. Carlin, Assistant Sales Manager, American Express Company, New York, N.Y. ;

Mr. T. Howard Peters, Commercial Attache, American Embassy, Cairo, U.A.R.

HISTORY OF COMMERCIAL RELATIONS

The Mission found that while historically the United States has been both an important market and source of supply for Egypt and Syria, trade with both Regions has been declining in recent years. The rise in prominence in United States trade with these countries began after World War II when normal European suppliers were unable, because of the war, to supply the Near East. Until the past few years the United States enjoyed an unprecedented sellers market in these countries. More recently foreign exchange difficulties in Egypt and a sustained drought in Syria with consequent loss of foreign exchange earnings have reduced imports of many dollar products until today only essential items such as machinery, raw materials for industry, transportation equipment, spare parts, chemicals, and pharmaceuticals are generally sold in this market. There has been increasing foreign competition for U.S. products as well, not only from traditional suppliers in West Europe but also from the Sino-Soviet bloc countries and from other nations such as Japan. The situation has rapidly switched to that of a buyers market and an extremely competitive one at that. The problem is further complicated by the fact that the U.A.R. does not have, as yet, a wide

diversity of exports and, as primarily an agricultural country, produces mainly items competitive to United States agriculture. Egypt's extra-long staple cotton, for example, the principal dollar export to the U. S. , is subject to an import quota which restricts dollar earnings. Syria's main dollar earner is raw carpet wool. There has been, traditionally, a substantial imbalance in commodity trade between the United States and the U. A. R.

United States firms have a history of limited private capital investment in the United Arab Republic. In 1958, the total value of such investment, confined mainly to the petroleum industry, transportation, and a limited amount of manufacturing and trade, totalled about \$110 million. Nearly \$90 million of this was invested in Egypt and \$20 million in Syria. In recent years there has been only a limited flow of private U. S. capital to the U. A. R. due largely to uncertainties over the political climate in the Near East as lack of information about the U.A.R.'s policy toward private capital investment.

The Mission was provided with the foregoing information as to the present position of U. S. trade and investment before it arrived in the U. A. R. At the request of the U. A. R. , which had been studying ways and means to increase its foreign exchange earnings, a specialist in international tourism was included on the Mission to investigate the potentialities for more visits by American tourists.

ATTITUDE TOWARDS DOING BUSINESS WITH THE UNITED STATES

The trade Mission had an opportunity for group meetings with various business organizations, chambers of commerce, and industry federations as well as individual discussions with private businessmen and Government officials concerned with economic development planning. Conversations with more than 1,000 individuals were held during the visit and about 500 private interviews with businessmen recorded for further study. It is believed that these meetings permitted exposure by the Mission not only to a representative cross-section of U. A. R. businessmen and Government leaders but also permitted the Mission to ascertain public and private attitudes towards doing business with the United States. In

practically all public meetings and in a majority of personal conversations with officials and businessmen in both the Northern and Southern Regions of the U.A.R. , the Trade Mission was advised time and time again of the following four apparent patterns of general thinking which have a bearing on the future business climate and future commercial relations with the United States.

1. There were unanimous group and personal expressions of welcome and friendship.

In addition to the numerous official and business luncheons and dinners and other functions held in honor of the Trade Mission and included in the official schedule, literally hundreds of individual invitations and indications of hospitality were tendered one or all members of the Mission to visit homes, offices and plants, which the Mission reluctantly had to refuse through sheer lack of time.

2. There was a widespread expression of desire for expanded commercial relations with the United States.

These were not only stated in both public and individual meetings (and the interest itself evidenced by attendance at such meetings and seeking out the Mission members) ; they were also usually accompanied by advice and discussion as to existing problems, suggestions of all types, including both the possible and the impossible, as to actions which could be taken to improve commercial relations.

There were also many expressions from individual businessmen in personal discussions expressing the urgent request that the United States do everything possible to cooperate commercially and economically with the U.A.R. « before it is too late », referring to the growing importance of Sino-Soviet bloc trade.

3. Everywhere the plea was expressed for a better understanding of the U.A.R. in the United States.

Many people, in public and private, expressed the hope that the Trade Mission would « tell the truth about us in the United States » after its return home. There were many references to the « unfair press ».

diversity of exports and, as primarily an agricultural country, produces mainly items competitive to United States agriculture. Egypt's extra-long staple cotton, for example, the principal dollar export to the U. S. , is subject to an import quota which restricts dollar earnings. Syria's main dollar earner is raw carpet wool. There has been, traditionally, a substantial imbalance in commodity trade between the United States and the U. A. R.

United States firms have a history of limited private capital investment in the United Arab Republic. In 1958, the total value of such investment, confined mainly to the petroleum industry, transportation, and a limited amount of manufacturing and trade, totalled about \$110 million. Nearly \$90 million of this was invested in Egypt and \$20 million in Syria. In recent years there has been only a limited flow of private U. S. capital to the U. A. R. due largely to uncertainties over the political climate in the Near East as lack of information about the U.A.R.'s policy toward private capital investment.

The Mission was provided with the foregoing information as to the present position of U. S. trade and investment before it arrived in the U. A. R. At the request of the U. A. R. , which had been studying ways and means to increase its foreign exchange earnings, a specialist in international tourism was included on the Mission to investigate the potentialities for more visits by American tourists.

ATTITUDE TOWARDS DOING BUSINESS WITH THE UNITED STATES

The trade Mission had an opportunity for group meetings with various business organizations, chambers of commerce, and industry federations as well as individual discussions with private businessmen and Government officials concerned with economic development planning. Conversations with more than 1,000 individuals were held during the visit and about 500 private interviews with businessmen recorded for further study. It is believed that these meetings permitted exposure by the Mission not only to a representative cross-section of U. A. R. businessmen and Government leaders but also permitted the Mission to ascertain public and private attitudes towards doing business with the United States. In

practically all public meetings and in a majority of personal conversations with officials and businessmen in both the Northern and Southern Regions of the U.A.R. , the Trade Mission was advised time and time again of the following four apparent patterns of general thinking which have a bearing on the future business climate and future commercial relations with the United States.

1. There were unanimous group and personal expressions of welcome and friendship.

In addition to the numerous official and business luncheons and dinners and other functions held in honor of the Trade Mission and included in the official schedule, literally hundreds of individual invitations and indications of hospitality were tendered one or all members of the Mission to visit homes, offices and plants, which the Mission reluctantly had to refuse through sheer lack of time.

2. There was a widespread expression of desire for expanded commercial relations with the United States.

These were not only stated in both public and individual meetings (and the interest itself evidenced by attendance at such meetings and seeking out the Mission members) ; they were also usually accompanied by advice and discussion as to existing problems, suggestions of all types, including both the possible and the impossible, as to actions which could be taken to improve commercial relations.

There were also many expressions from individual businessmen in personal discussions expressing the urgent request that the United States do everything possible to cooperate commercially and economically with the U.A.R. « before it is too late », referring to the growing importance of Sino-Soviet bloc trade.

3. Everywhere the plea was expressed for a better understanding of the U.A.R. in the United States.

Many people, in public and private, expressed the hope that the Trade Mission would « tell the truth about us in the United States » after its return home. There were many references to the « unfair press ».

While it was pointed out that the basis for news stories in the United States must be the material supplied by newspaper writers correspondents for either the local or international press who are located in the U.A.R., it is obvious that a widespread feeling exists that development of business relations is being hampered by lack of real understanding of the situation here.

4. There were widespread expressions of the necessity for external financial and technical aid to permit the U.A.R. to succeed in its developmental efforts, and these expressions were coupled with statements of determination that such assistance would be sought and gratefully welcomed from all sources provided only that no undesirable strings were attached.

5. Of great importance to the American businessmen in gauging the potential of this market and determining his own plans toward it is the exceptionally high regard and expressed preference for the quality of United States products and know-how, American managerial, engineering and technical abilities, and dealings with American businessmen.

The hope was frequently expressed that the government of the two countries and the American business community would take every action possible to permit this preference to become effective.

6. In all public meetings and many private conversations the Trade Missions's attention was drawn to the great industrial and other development progress which has been made in such a short time « under the leadership of our beloved President Gamal Abdel Nasser » .

OPPORTUNITIES FOR FUTURE U.S. INVESTMENT

The Mission had an opportunity for personal discussion with President Gamal Abdel Nasser and with Central Minister of Economy and Treasury, and President of the Economic Organization, Dr. Abdel Moneim El-Kaissouny, regarding the policy of the U.A.R. towards foreign capital investment. It was believed pertinent to raise this subject at the highest levels in view of action taken by the U. A. R. following the Suez Canal crisis to nationalize or otherwise expropriate various British and French investments. The recent action nationalizing the

National Bank of Egypt and the Bank Misr also was discussed. So was the Government's policy regarding implementation of Law No. 20 of 1957 which permits the U.A.R. to appoint the president of the board of directors, the managing director, and the general manager of any company 25% of whose stock is owned by the Economic Organization. Coming on the heels of a recent press statement attributed to President Nasser where he is quoted as saying that the U. A. R. preferred industrial development through the use of domestic capital in the first instance, by foreign loans secondly, and lastly by foreign private capital invested, particularly where technical know-how is needed, these conversations were most useful in assessing the climate for U.S. private capital investment.

The Mission has the personal assurances of President Nasser that U.S. private capital is definitely desired and welcome in the U.A.R. , and that there is a place for foreign capital investment in the economic development of that country. It was explained that the action in taking over the British and French interests was the consequence of the Suez Canal aggression and was considered necessary to throw off the last vestiges of domination by former colonial powers. It will be the policy of the U.A.R. not to let any private group, either domestic or foreign, gain a position in the country where it can dominate any aspect of the national economy or the Government to the possible detriment of the people. This is the primary reason for the recent nationalizing of the National Bank and the Bank Misr.

With respect to the implied threat of possible Government intervention in an established private company through the provisions of Law No. 20 of 1957, the Mission was informed that once a company is licensed to operate as a private entity that the Government has no intention of interfering with its operations. There will be definite fields of activity where the Government will wish to participate, either by wholly owning an enterprise, or possibly by sharing in its capital. These spheres of activity will be clearly spelled out in advance of any specific agreement for foreign capital participation. It was pointed out, in defense of this position, that the necessity, magnitude, complexity, and cost of the U.A.R. economic development program is such to require all of the cooperation and assistance possible from private enterprise. The U.A.R. has neither the capital nor the human resources to attempt to own or manage every phase of its economy, and actively desires that private

foreign capital will join with private U.A.R. capital in the economic development of the country.

OPPORTUNITIES FOR TOURISM

The Mission notes with satisfaction that in 1959, United States tourists, some 20,000 in number, constituted the largest single group of visitors to Egypt from abroad excluding visitors from nearly Arab States. The importance of increased numbers of U.S. tourists for the U.A.R. in relation to the dollar exchange they bring with them can be an extremely important influence in the growth of U.S. trade with that country. However, it was frequently pointed out that this number of tourists, while important, is relatively minor compared to the total Americans traveling abroad or the totals attracted by a number of other specific countries who have already developed tourism into their largest single source of foreign exchange earnings.

The Mission is unanimously of the opinion that the U.A.R.'s greatest natural resource is its tourist attractions and that if this medium is rapidly developed it has potentials for becoming the principal source of dollar income for the U.A.R. Much remains to be done to fully realize this potentiality, however. Because of this importance a special report was prepared by the Mission's tourism specialist analyzing some steps believed necessary or helpful in developing the tourist industry in the U.A.R.

RECOMMENDATIONS FOR CONSIDERATION BY THE U.S. GOVERNMENT.

In concluding this report, the Mission believes that the U. S. Government may wish to consider the following matters :

1. The subject of greater direct financial assistance to the U.A.R. It appears evident to the Mission that U. S. loans at this time for the purposes of expediting the U.A.R. economic development program could serve the twofold purpose of strengthening that economy and at the same time greatly assist U.S. firms in re-establishing themselves in that market. Such loans should, wherever possible, be tied to U.S. procurement

It will be noted that the U.A.R. plans to develop its economy through the employment of national capital, by foreign loans, and by private investment. While the Mission is confident there is a part to be played by private U.S. foreign capital in that country and that the U. A. R. desires such investment, the unanswered question is whether loans might not be forthcoming from the United States as they have from other countries. The Mission believes that the U.A.R. would be an eligible recipient of such loans and that the strengthening of the U.A.R. economy with the assistance of the United States, both by the Government and by U.S. private industry, would be in our national interest.

CONCLUSION AND ACKNOWLEDGMENTS

The U.S. Trade Mission wishes to acknowledge and thank publicly the many officials of Government and business organizations and the many businessmen who not only expressed sympathy and interest in the objectives of the Mission but who also extended every form of possible assistance, advice, and cooperation to further these aims, including organizing and personally attending the many meetings, consultations and functions.

This report would be incomplete without a special word of appreciation of the extremely generous hospitality and friendliness unambiguously displayed in every city visited by the Mission in the United Arab Republic.

This Mission - as a symbol of the United States - was almost overwhelmed by hospitality, for which it offers personal thanks. The Mission also learned that this generosity is not reserved only for official visitors, but is a deeply ingrained natural trait.

The Mission predicts that those American businessmen who follow its advice to seek greater business potentialities here, and those American tourists who follow its advice to visit the truly wonderful attractions here will thank the Mission for this advice because of the friendly and hospitable reception they will find awaiting them.

OBSERVATIONS ON FINANCE

and

INVESTMENT

by

WILLIAM F. HUCK

Financial Specialist

The industrialization program of the U.A.R. is of such proportions that foreign capital in substantial amounts will be needed if the program is to be successfully carried out. My conversations with many local businessmen and bankers have convinced me that there is a large amount of local capital now being held in reserve - whether from fear of loss through nationalization or other reasons, I do not know. The fact remains that payment in hard currencies by foreign sellers of merchandises places an immediate burden on the U.A.R. to work out its various problems. Although foreign capital is needed throughout the U. A. R., the requirements vary in the Egyptian Region as against the Syrian Region. Therefore, I will comment briefly on the respective regions.

The Egyptian currency does not command a free exchange to the extent the Syrian currency does. As a result, Egyptian businessmen seek more joint ventures and more liberal terms on their loans. The nationalization program in Egypt unquestionably will have a detrimental effect on the thinking of American businessmen who might otherwise desire to invest in Egypt. The establishing of a corporation whereby the percentage of American ownership is limited is another deterrent.

At the present time American banks will not consider discounting paper originating in foreign countries where the terms are such as the Egyptian businessmen insist upon. This is an additional handicap to the American manufacturer when he attempts to sell merchandise and equipment in the Egyptian Region. The Egyptian banks also are not prone to accept such paper, as they maintain their funds are too limited, referring to dollar exchange. The fact that they will guarantee dol-

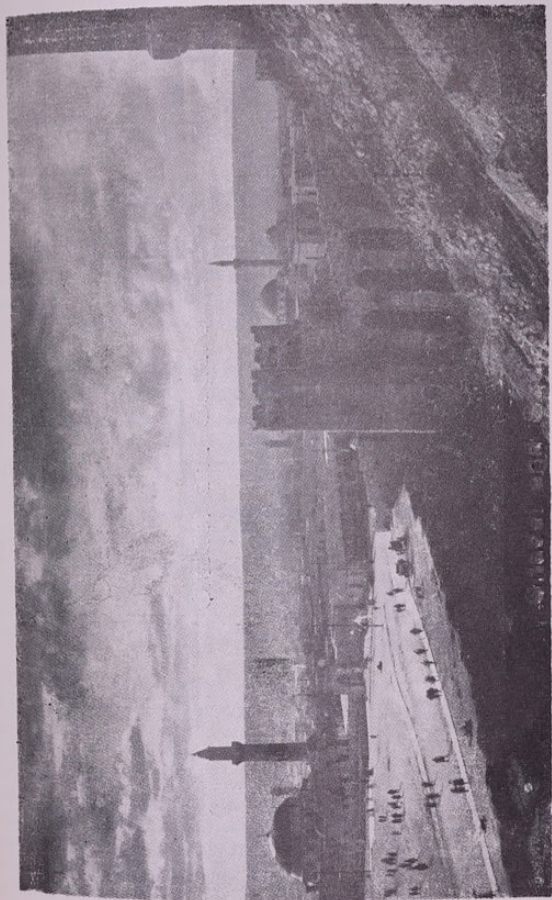

lar exchange over a period of years is not of sufficient interest to the American banker to permit his discounting the paper.

In the Syrian Region conditions are somewhat different. Currency has a much freer exchange basis and the demand and need for present plans for foreign investment appears to be less than in Egyptian Region. In the course of my travels in Syria, meeting many Syrian businessmen, I would estimate that over 75% of the requests for aid were in the form of loans as credit terms rather than investments. In many instances the Syrian businessmen's comments indicated that they had adequate funds available but were not prone to make advances in payment of merchandise, but rather were desirous of obtaining long term loans to carry out their transactions. Whether this was a case of waiting to see what developed in the nature of legislation pertaining to nationalization or confiscation, I do not know, but in any event I became convinced there was much capital in Syria which could be more gainfully employed.

The policies invoked by the U.S. governmental loaning agencies in granting credits have not been particularly encouraging to the U. A. R. government officials or U.A.R. businessmen. It is evident that these U.S. governmental loaning agencies must revise and liberalize their loaning policies. Commitments or consideration of advances to foreign governments or foreign businessmen must be speeded up and not delayed unduly in the manner they have been. The delay experienced in obtaining loans from U.S. governmental loaning agencies in many cases appears entirely unjustified and has been the cause not only of much dissatisfaction, but a deterrent in effecting good and proper relations between foreign governments and people in foreign areas. This fact is emphasized by the loans and help already granted by German, French and other European governmental agencies and European business concerns to the U.A.R. and its business structure, which loans and aid not only have not been delayed but have been granted on a far more liberal basis.

Throughout our travels over a considerable part of the U. A. R. the businessmen and government officials were most friendly, and strongly indicated they preferred doing business with Americans. However, unless some of the obstacles such as those enumerated are removed, we cannot hope for the degree of success otherwise possible. The United States

must provide proper insurance to U.S. businessmen as above outlined. The U.S. Government loaning agencies must act in a speedier manner, their loaning policies must be liberalized to compete with those of German, French and other European governments. Greater publicity must be given to American businessmen of the protection they will be given. If these things are done it is possible that the U.A.R. Government and U.A.R. businessmen will be inclined to ease up on their requirements and offer greater inducements to the American businessmen, which will result in better relations between both countries.

Citadel and Square

SOVIET - ARAB Trade Relations

by

F. KATIN

The Soviet Union is doing very active business with all the independent Arab countries. Trading with the United Arab Republic, Iraq, Lebanon, Yemen, Sudan, Morocco and Tunisia is carried on and developed on the basis of government trade agreements.

The volume of commercial exchange increases year after year between the Soviet Union and these countries. This is the best evidence of mutual interest deriving from such trade transactions. For instance, trade exchange with the U.A.R. increased 8 times the volume of 5 years: 1954/1959; with Lebanon, 3 times, etc

The secret of success in implementing the trade agreements concluded between the Soviet Union and the Arab countries, lies in the spirit of respecting the principle of mutual interest and equality between the contracting parties, and taking into consideration the national sovereignty. The Soviet Union in concluding these trade agreements does not aim at obtaining special concessions or unilateral advantages.

The Soviet Union which considers trade between countries as a free enterprise does not impose on the second party products which he does not need or the import of which would damage the local production. As an evidence of this, one should study the list of Soviet exports to the Arab countries. The Soviet Union, for instance, sells to the United Arab Republic machinery, tools, timber, iron sheets, petroleum products, and many other commodities which come on the top of the lists of imports by the U.A.R. All the above machinery and products are necessary for the economical development and the vital needs of both the Egyptian and Syrian Regions.

The young Iraqi Republic needs agricultural machinery, timber, cotton goods, sugar and other products. The Soviet Union supplies Iraq with all that is necessary to strengthen its economy and development. Although trade with Iraq has entered its second year and the Soviet products have not yet been known on a large scale in the Iraqi market, a Soviet industrial fair was opened in Bagdad last April. About half a million persons visited that Fair. In 1959, the wheat crop was very bad in Iraq due to drought. The Soviet Union sent to Iraq 117,000 tons of wheat.

Yemen gets from the Soviet Union cement, matches, soap & sugar; in return, Yemen exports coffee beans to the Soviet Union.

The Soviet Union, in supplying the Arab countries with equipment, cars and agricultural machinery, accepts payments in instalments for 2 and 3 years. This system of payment is convenient to Arab businessmen and to consumers. This is proved by the quantities of goods sold and increasing year after year.

The Arab countries, in carrying on business with the Soviet Union, do not only get, the products they need, but also pay the price in goods exported by them to the Soviet Union.

This system of balance of payment is very convenient to the Arab countries because it is preserving their gold reserve and hard currencies. The U.A.R., for instance, exports cotton as payment for the industrial products it gets from the Soviet Union.

Lebanon exports oranges, lemons, apples and wool as payment for the timber, metal sheets, and wheat it gets from the Soviet Union. So does Morocco.

The Arab countries find the Soviet Union a supplier of products they need, and a secured market for their agricultural produce. All this develops the economy of the Arab countries, and increases the proportion of employment.

It is worth mentioning that by virtue of trade and payment agreements concluded with the Arab countries, the Soviet Union accepts payments in local currencies of the countries concerned. All this helps to strengthen the monetary and financial standing of the Arab countries.

ECONOMICAL DEVELOPMENT

in the Northern Region

The national income rises from 1,900 million Syrian Pounds in 1959 to 4,653 million Syr. Pounds in 1977.

61% increase in national income.

26% » in individual income.

Imperialism worked hard to keep the Syrian economy subject to foreign economy. By doing this, it aimed at keeping Syria as a source of raw materials, and a market for its industrial products. Consequently the economical development in the Syrian Region was neglected by the occupying authorities. As soon as Syria won its independence and exercised its sovereignty, the national government found itself facing a very hard task. The successive governments attempted to develop the national economy by sound national means. Gradually, the Syrian economy became the source of numerous advantages to the country.

Unity was proclaimed and the U.A.R. was born. The young Republic decided at once to develop the Syrian economy by drawing up a 10-year economical Plan to be executed from 1958 till 1967. This Plan comprises projects of irrigation, agriculture, electricity and industry. In a word, all that tends to increase the national income in the Northern Region.

BASES of the DEVELOPMENT PLAN : This Plan depends on national saving. For this purpose, it has been decided to limit consumption by the individual, public and government groups during the 10-year period of the Plan so the national saving can be raised to the level

required to finance the economical development. This Plan also aims at raising the average of net investment gradually from 13% to 17% of the national income.

NEW INVESTMENT of 4,998 million Syrian Pounds :

The new Plan requires the investment of about 4,998 Syr. Pounds during the coming 10-years. 4,528 Syr. Pounds of which are : local currencies and the remaining 470 million Pounds are from foreign loans after deducting due instalments and interest during this period. 2,170 million Pounds constituting about 47% of the whole budget - have been appropriated for production projects, and 2,358 million Pounds constituting about 53% of the budget - for consumption industries. The Government will share in financing this Plan with about 2,140 million Pounds.

560 million Pounds for INDUSTRY :

The execution of this Plan has been started by drawing up the industrial economical development program. This program aims at the establishment of big projects which individuals cannot afford to finance, and which do not give large profits, such as mining, vocational training, tourism, industrial chemistry, and petroleum exploring. This program will cost during the coming 6-years 568 million Pounds, 60% of which local currency, and the remaining 40% by foreign currencies.

The most important projects of this Program are the Petroleum projects which will cost about 266 million Pounds, and the converting industries which will cost 217 million Pounds. 60 million Pounds have been added as reserve funds for emergency execution.

104 million Pounds from private sector :

Private Sector will share in financing this Plan within the limit of 104 million Pounds. Public Sector will share with about 405.6 million Pounds, 189 million of which by hard currencies coming from loans concluded by the U.A.R. with Soviet Union, West Germany and Japan.

In addition of these sums of money, it has been decided to spend 60 million Pounds during each of the remaining four years of the Plan.

185 million Pounds for 1959-1960 budget :

The execution of this program started in the fiscal year 1958-59 and the projects executed during that year cost 80.8 millions Pounds. Extension in execution started as of the first of the current year. The appropriations in the 1959-1960 budget were more than 185.5 million Pounds. There is no doubt that this is a big step for achieving the development programs. These appropriations were distributed as follows :

- 60.3 million Pounds for projects of the Ministry of Industry.
- 78.8 » » for the Institute of Major Projects for irrigation and electricity Plans.
- 27.5 million Pounds for communication projects.

The economical and social advantages of the PLAN .

The execution of this Plan leads to the investment of idle resources in irrigation projects of the uncultivated and unirrigated lands, saving the country from depending on rainfalls, and in generating electric power needed for industrial and irrigation projects.

The cultivated area of irrigated and unirrigated land will rise from 4.5 million hectares to 7.1 million hectares, making the irrigated area go up from 11% to 28% of the cultivated land. This will also raise our agricultural income by 100% and will save farming from its dependence on rainfall and weather changes, for this dependence led - in the past - to big economical crises. Electric power will increase from 51,000 KWs to 500,000 KWs. If only half of this power is exploited, the Northern Region will be supplied with not less than 2,216 million KWs per hour annually, covering the need of the Northern Region of electricity in the coming twenty years.

61% increase in national income :

The execution of this Plan will result in a increase in national

income with about 60.9% of income before Unity. It will also increase the average share of the individual from national income with about 25.8%.

EXPENSES

of the whole Program of

ECONOMIC DEVELOPMENT

1,540	million Pounds :	for electricity projects
560	»	» : for industry
2,800	»	» : for irrigation and agricultural projects
100	»	» : for services (transportation, insurance, etc...)
5,000	»	» : T o t a l in Syrian Pounds.

Condensed from the Industrial & Agricultural Production FAIR, Aleppo 1960.

U. A. R.

LAND and PEOPLE

The United Arab Republic is composed of two regions :

THE NORTHERN REGION (SYRIA) : which is situated on the western corner of the Asian continent and whose area is approximately 23,000 square miles.

THE SOUTHERN REGION (EGYPT) : which occupies the north-eastern corner of the African continent and whose area is approximately 386,000 square miles.

Both Regions represent the key to the Arab world, and they occupy an important geographical position because of their situation in the midst of the old world.

The inhabited areas in both regions of the Republic are restricted to those areas which have rivers, wells or other water resources: However the remaining uninhabited areas have their own values because of the rich deposits of minerals which they contain.

One of the main advantages of the United Arab Republic is that it is situated at the junction of three continents which comprised the old world: Europe, Asia and Africa, and as such it is the meeting place of the culture and civilization of these continents. Because of its unique position, this area has had to play a vital and dangerous role in the history of humanity, helped as it was by the fact that it was the cradle of all those ancient civilizations, and the starting points of those great empires which extended to the east and to the west, and above all by the fact that it was the place where the three heavenly religions first appeared and where the first words of the ancient philosophies and ideologies were heard.

The United Arab Republic is the first Arab union in modern

history, whose lands extend over both Africa and Asia. It is also regarded as the main and natural gate to either continent. Consequently, both regions of the Republic have always dominated the routes of commerce and transportation between east and west, including those leading into and out of the Arab world:

ELEMENTS of LIFE in the new Republic :

Life in the United Arab Republic depends on various elements, some of them natural, others human.

1) Natural Elements :

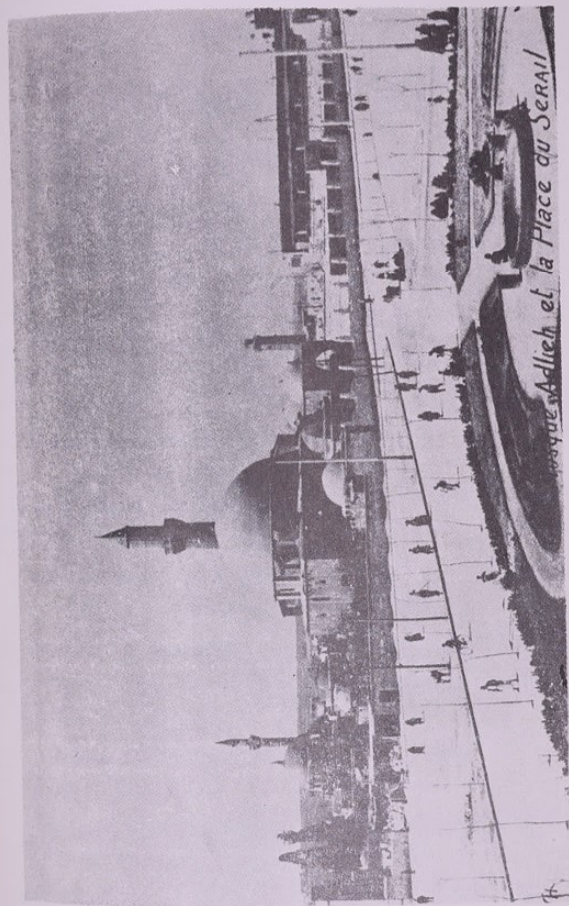

These include the natural endowments of the United Arab Republic whether this is in its geographical position or in its natural resources,

The United Arab Republic occupies a central position between the two major fields of production, which are :

- a) The field of tropical production in Asia and Africa, which is restricted to the production of basic materials and foodstuffs : both of vital importance to the industries in Europe and America.
- b) The field of industrial production in Europe, which is restricted to the production of those commodities which are most in demand in the Afro-Asian East.

2) Human Elements :

The United Arab Republic has the largest population in the whole of the Arab World. It is the home of 30 million Arabs of a total of 40 million Arabs in this area who form one integrated Arab-speaking nation.

Mosque Adlieh et la Place du Serail

Mosque Adlieh

planted with cereals and cotton, and the remaining area is planted with fruit trees and other crops.

- 6) There are about 5,000,000 sheep in the Syrian Region depending on pasture. This constitutes the important section of our animal wealth.
- 7) Forests in the Region occupy 448,844 hectares of land.

From the above statistics we get the following facts :

- a— The Syrian Region cultivates only 35% of its land.
- b— The Region depends in its farming mainly on rainfall, and this leads to fluctuation in production.
- c— The Region depends on a limited number of crops which may expose it to economical crises when these crops are defective or when world prices go down.
- d— The dependence on pumps in irrigation raises the cost of production.

In addition, there are other factors affecting agricultural production, particularly :

- a— The shortage in the means of transportation which raises the cost of production.
- b— The shortage in warehouses, whether for cotton or cereals, which leads to chaos in marketing.

After Unity, the State has endeavoured to fill these gaps and therefore has planned the following projects :

A - Irrigation projects :

The most important irrigation projects which will be executed in the coming 10 years are :

Projects	Location	Area to be irrigated in hectares
Homs-Hama	Assi river	11.000
Tel-Maghas	Khabour river, Hassaka	8.500
Sen	Sen river, Lattakiah	3.800
Meteireb	Hauran	2.200
El-Matkh	Aleppo	6.000
El-Rouge	»	5.000
El-Ghab	Assi river, (Hama)	70.000
Euphrates dam	Youssef Pacha	400.000

In other words, the total area of land which will be irrigated following the execution of this project will be 527,500 hectares, raising the percentage of the area of irrigated land to 38% of the cultivated land, with an increase of about 100%.

B - Cereals warehouses :

Cereals warehouses will be built throughout the Mohafazats of the Region during a period of 10 years, and their total capacity will be 400,000 tons.

C - Improvement of means of communications :

It has been decided to build a railway line extending from Kamashli - Hassakah - Deir ez zor - Aleppo - Lattakiah. This will lower the cost of transportation of the ton from 60 L.S. to 35 L.S.

D - Projects which will be executed by the Ministry of Agriculture :

The Ministry of Agriculture has drawn up a 5-year Plan for the development of the agricultural Sector. The execution of this Plan was started in 1958. Following are the most important projects which have been or are being accomplished :

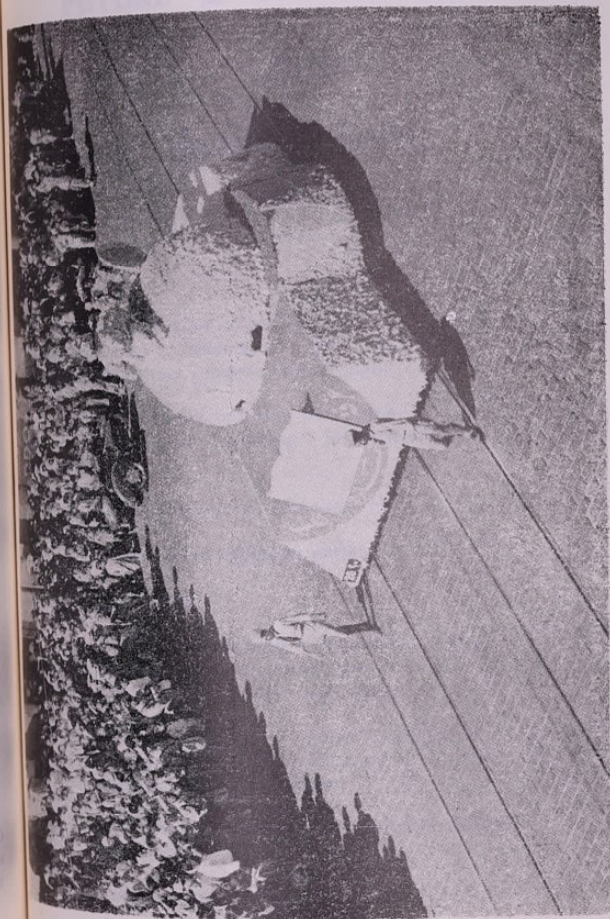

1 - Accomplished projects :

- a) 3 nurseries for vine shrubs grafted in the American way. These nurseries should yield 200,000 shrubs in the current year.
- b) The veterinary Center and the veterinary pharmacy in Damascus.
- c) 2 forest nurseries in Madaya (Damascus) and Arida (Homs); these two nurseries should yield one million forest young trees.
- d) Forest school in Lattakiah which should graduate 30 students per year. This will serve the Middle-East area with the cooperation of the U.N.O.
- e) A propagation and research Post in the Sen area (Lattakiah) for agrumes (lemons, oranges ; etc . . .) This Post should yield one million young trees per year.
- f) An olive research Post in Tartouze.
- g) Forest research Post in Lattakiah.
- h) Artificial mating Post in Damascus,

2 - Projects under execution :

These include the establishment of :

- 1) Training-Posts in the use of agricultural machinery.
 - 2) Pasturing improvement Posts.
 - 3) Research and propagation Posts for potatoes in Sarghaya (Damascus).
 - 4) 2 dairy factories in Damascus and in Aleppo with the cooperation of UNSEF.
 - 5) Poultry station in Hauran.
 - 6) Research station in Hassakah.
 - 7) Agricultural quarantines.
 - 8) Agricultural laboratories.
- Etc. . . . Etc. . . .

FUTURE of COTTON INDUSTRY in the Northern Region (SYRIA)

The manufacturing of cotton goods in the Northern Region is undergoing a stage of extension in these recent years. In 1958, this industry registered great progress due to many reasons.

In addition to the fact that the cotton factories have continued their work regularly, the following 2 important events were evinced in the past 2 years :

- 1) the operation of the Promotion Fund for spinning and weaving.
- 2) the obvious extension in production capacity.

PROMOTION FUND

The Promotion Fund aims at supporting cotton industry in raising the production capacity and increasing export. In undertaking its task the Fund depends on means, the most important of which are :

- a) Undertaking necessary studies and drawing up programs for the organization of the industry of spinning and weaving, and lowering cost of production.
- b) Acting as a mediator between Syrian factories and foreign importers.
- c) Presenting aid for export.

ENLARGING THE CAPACITY OF PRODUCTION

The evinced enlargement in the production capacity during the past 2 years was due to many reasons, the most important of which were:

- a) The Mills of the United Arab industrial Company in Damascus had finished installing the spinning unit and started production. This spinning unit includes 10,000 spindles.
- b) The Chahba spinning and weaving Company in Aleppo added 5,400 spindles in 1958 to its mills. In addition to these the Company bought 150 automatic looms from the Soviet Union.

The total number of spindles operating in the Northern Region is 104,900.

IMPORT OF LOOMS

In 1958, 400 automatic looms were installed making the total number of looms in the Northern Region as follows:

- 2,000 automatic looms,
- 4,766 mechanical looms, at small mills,
- 10,000 hand looms.

INCREASE IN THE CONSUMPTION OF GINNED COTTON.

The enlargement in the manufacturing of cotton yarns increased the demand for ginned cotton.

INCREASE IN EMPLOYMENT

This enlargement required the employment of more workers. The IBRD mission which visited the Northern Region in 1954 reported that 28,450 workers were employed in the cotton mills. Now the number is about 30,000.

COTTON TEXTILES

In 1957 : 5,915 tons (about 48 million meters) were produced by the 7

big mills in Damascus and Aleppo.

In 1958 : 6,370 tons (about 51.7 million meters) were produced.

The total quantity of manufactured cotton goods in the Syrian Region in 1957 was about 75 million meters, and in 1958 : 78.7 million meters.

FACING FOREIGN COMPETITION

It is observed that the major part of imported cotton goods is of the finer fabrics which are not manufactured locally. The Syrian mills enjoy a strong position in the manufacturing of thicker fabrics and do not fear foreign competition. According to 1957 statistics, the Northern Region imported cotton goods from 36 countries, the most important of which were : Japan, U.S.A. , and Britain. The Northern Region imported cotton goods from the Southern Region for about 368.550 L.S.

INCREASE IN EXPORT

The export of cotton yarns and goods registered a continuous increase during the past 4 years.

- 1 - In 1958 : Syria exported 782 tons of cotton yarns as compared to 114 tons exported in 1955.
- 2 - In 1958 : Syria exported 670 tons of cotton goods as compared to 363 tons exported in 1955.
- 3 - Urgent necessary measures were taken by the Promoting Fund when it was found that foreign cotton goods were competing with our goods in Jordan. Had it not been for these measures, we would not have been able to stop the decrease in the quantities of exports to Jordan.
- 4 - Similar measures were taken in relation to Saudi Arabia. In 1959, exported cotton goods increased by 100 tons considering 1957 quantities. The Saudi Government had its role in improving our position in the Saudi market by lifting the financial restrictions it had imposed on exchange of goods between the 2 countries in 1957.
- 5 - The effectiveness of the Promoting Fund was observed in the im-

portant transactions concluded with Rumania in 1958, 56% of the total exports of cotton yarn went to Rumania.

COMPLEMENTARY ECONOMY

Therefore, we can confirm that the Northern Region has taken practical steps in the field of cotton industry, steps which would make us approach the goal desired by all of us and to achieve a complementary economy between the 2 Regions for the welfare of the U.A.R. people. We observe that cotton manufacturing in the Northern Region is confined to thick yarns and goods. For this reason, the Northern Region imports the fine yarns and goods it needs; a small proportion of these are imported from the Southern Region.

Economic collaboration is desired to achieve a complementary economy in the field of cotton industry between the 2 Regions of the U.A.R. on the basis that the Southern Region manufactures fine yarns and goods, and the Northern Region manufactures thick yarns and goods, and each of the 2 Regions imports its needs from the other. This would make both Regions give up their imports from foreign countries and so save more than 20 million pounds of hard currencies.

U. A. R. FOREIGN TRADE

To consolidate its newly acquired economic independence the Government of the U.A.R. issued a number of decrees regulating exports and imports.

A marked increase was achieved in the value of the Southern Region's exports. These rose from L.E. 150,2 millions in 1952 to L.E. 166,3 millions in 1958.

Imports also increased from L.E. 226,9 million in 1952 to L.E. 240,2 million in 1958 due to the increase of imports in production, supply goods and raw materials as a result of the implementation of the economic development program.

In The Northern Region, the regulations controlling exports and imports only crystallised in 1952, when decree No. 60 was passed to lay the bases of its foreign trade. It was decreed that exports would be allowed without licence except in very few cases to avoid a shortage in foodstuffs or other materials necessary for the implementation of national development projects and the development of certain aspects of the national economy,

As to the imports, they are available by special permit except when exemption has been granted. Restrictions on imports aim at protecting national production.

The value of the Northern Region's exports in 1955 reached 48 million Syrian liras marking an increase of 88%. Imports were evaluated at 616 million Syrian liras marking an increase of 47% due to rising need for agricultural equipment and machinery used in agricultural development.

The Northern Region's foreign trade during the past seven years

shows a continuous improvement with the exception of the year 1955 when crops were bad due to low rainfall.

In the Southern Region, regulations were set following 1952 by which all foreign trade depended on bilateral agreements with the countries dealt with. A basic shift in trade was effected both with regard to exports and imports due to the great industrial movement now sweeping the country.

Our importation policy aims at increasing imports of essential productive commodities such as machinery and raw materials required by local industry to enable it to expand and increase its output so as to ensure self-sufficiency to the country with respect to imported products. It also aims at helping import supply commodities that do not abound in the country and at keeping a wise balance between the said commodities on the one hand and consumption of locally-produced items on the other, setting at the same time a limit to non-essential imports.

In its desire to facilitate importation procedures and to create stability and confidence among importers on the one hand, and to make up for the deficiencies in the balance of trade on the other, the Ministry of Economy is guided by certain rules. Trade exchange and the balance of accounts between the U.A.R. and various countries will have an effective bearing in the determination of the total value covered by the import licences issued for any given country.

Decisions in the matter of applications for import licences are made in the light of the country's requirements and of the average quantities of items imported in the course of the last three years as well as of the average of the actual imports for six months either by the importer himself or through the medium of third parties on his behalf.

In determining the quota ascribed by the Ministry to each importer on the basis of the statistical data supplied by him, the Ministry gives priority to such applications for the same commodity as are made with the lowest price.

Applications not complying with the above indications are not taken into consideration except in very few exceptions.

Lebanon constitutes the largest importing country from the Northern Region and other Arab States. It depends on the Northern Region for its grain, vegetables, fruit, meat supplies, and cotton for its cotton products. The Eastern Bloc's trade with the Northern Region amounted to 84,233 million liras (23,394 dollars) in 1957, or 15.36% of the region's total exports. The Eastern Bloc's trade figure shows a definite increase as a result of the conclusion of several trade agreements with countries of the Eastern Bloc aiming at a more equitable trade balance. Trade with this bloc also increased in 1957 as a result of the economic blockade imposed on the country by the Western Bloc. Imports of the Northern Region from Arab countries in 1957 reached the figure of 116,246 million liras or 18.85% of Syria's total imports - these include oil refinery products from Iraq and Saudi Arabia. Due to the fact that Syrian products largely resemble those of other countries, the percentage of Syrian imports from them is fairly small. The largest exporting country to the Northern Region is the U.S.A. Imports from U.S.A. in 1957 amounted to 69,143 million liras or 11.73% of the total imports; the percentage of imports from West Germany was 10.66%, from Britain 7.71%, from France 6.94% and from Italy 6.69%.

The Northern Region concluded 21 trade agreements before the birth of the U.A.R., 19 of which have already been put into effect. The provisional constitution stands by such agreements among which is one facilitating trade exchange between Arab League countries.

The agreements can be divided as follows:

- 1) Trade and payment agreements constituting exemption from duties or special decrease in duties facilitating exchanges and transit trade between countries of the Arab League. This includes bilateral trade agreements between the Northern Region and Lebanon, Jordan and Saudi Arabia.
- 2) Trade and payment agreements between the Northern Region, countries of Socialist Bloc and other countries. These include Poland, the Soviet Union, East Germany, Chinese People's Republic, Rumania, Hungary, Bulgaria and Czechoslovakia, as well as India, Greece, Japan and Pakistan.

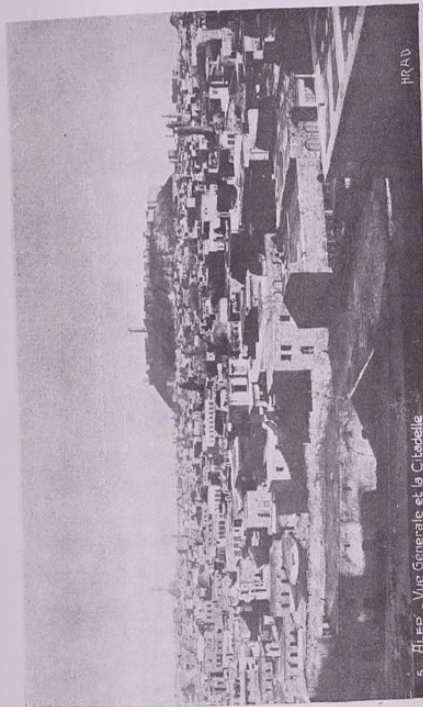

SYRIAN INDUSTRY

in 1959

The executive Ministry of Industry in the Northern Region published the first Report about its accomplished work in 1959. This Report included a detailed list of the Syrian industries operating by the end of 1959.

The following table shows the total sum of the capitals invested in industry, the number of operating factories, and the total number of workers.

Type of industry	Number of factories	Capital invested in L.S.	Number of workers
Textile	1.894	200.120.720	24.352
Food	609	69.336.691	6.175
Chemical	257	59.520.900	3.915
Mechanical	627	33.600.000	5.724
Total	3.387	362.570.311	40.166

BRIEF STUDY of the MOST IMPORTANT INDUSTRIES OPERATING in the SYRIAN REGION

SPINNING AND WEAVING INDUSTRY :

The spinning and weaving industry is one of the most important industries in the Syrian Region, for its production constitutes 50% of the exports of the Region which amount to about 560 million L.S. This is due to the long experience which rendered a world reputation to Syrian weavers.

The following table shows the development of production from 1937 to the end of 1959.

Year	Cotton Yarn (Tons)	Fibran (Tons)
1937	560	—
1939	804	—
1944	1,715	—
1950	5,460	821
1953	6,885	2,152
1954	7,400	2,300
1955	7,800	2,500
1956	7,952	3,478
1957	7,940	3,500
1958	8,620	The united Arab Industrial Company started its production in 1958.
1959	9,327	

WOOL YARN SPINNING :

The industry of wool spinning is weak in the Northern Region because there are only 2 mills in Aleppo running 2,200 spindles and their productive capacity is about 14,000 Kgs. of yarns annually.

The Ministry of Industry, recently, licenced the establishment of 2 mills :

- 1 : A spinning and weaving wool mill in Damascus of 6,000 spindles and 100 looms,
- 2 : A spinning and weaving wool mill in Damascus of 3,000 spindles and 30 looms.

COTTON TEXTILE INDUSTRY :

The weaving industry was, formerly, run by hand-loom. Mechanical looms were introduced into Syria after the First World War.

Mechanical looms are distributed among Damascus, Aleppo and Homs as follows :

1,142	looms in Damascus plus 500 looms recently licenced.
1,085	» in Aleppo » 492 » » » ,
416	» in Homs » 192 » » » .

RAYON TEXTILE INDUSTRY :

This industry is concentrated in Aleppo, and uses 3,275 looms - about 90% of the looms operating in Syria. Its productive capacity is about 84 million meters of tissue. These looms produce only 50% of their actual capacity due to the lack of outlets,

This industry depends on the rayon yarns imported from abroad or produced locally.

WOOL TEXTILE INDUSTRY :

There are 4 mills for the weaving of wool in Damascus, using 49 looms, and producing 136,800 meters annually. 18 looms have been added

recently.

Another mill of 100 looms has been recently licenced.

KNITTING INDUSTRY :

This is one of the prosperous industries. It depends on raw materials imported from abroad. Our exports were as follows :

1955	: L.S.	8,252,000
1956	:	12,707,000
1957	:	14,509,000
1958	:	15,731,000

II : CEMENT :

The Cement Industry is one of the most important industries operating in Syria. At present, there are 3 factories operating :

DAMASCUS : The Damascus cement factory was established in 1930 with a capital of 6 million L.S. which was later raised to 11,5 million L.S. Its productive capacity is 6 million L.S. 250,000 tons annually.

ALEPPO : There are 2 cement factories operating in Aleppo.

1 : The Chahba Cement factory established in 1948 with a capital of 10,8 million L.S. and a productive capacity of 225,000 tons annually.

2 : The Société Nationale de la fabrication du Ciment established in 1960 with a capital of 7,5 million L.S. and a productive capacity of 100,000 tons annually.

HOMS :

The establishment of 2 other cement factories, one in Homs, the other in Hama, have been licenced.

III : GLASS :

There are 2 modern factories in Damascus, and 13 small and primitive ones in the Syrian Region.

The 2 modern factories are :

1 : The Syrian Glass Company ; its capital is 7 million L.S. and its production in 1958 was 12,620 tons. This factory exports about 37% of its production.

2 : Arabi, Katbi and Sarmini factory : Its productive capacity is about 2,400 tons annually, and it exports about 35% of its production.

IV : PLYWOOD :

Demand for Plywood has increased recently due to the rise in the standard of living and the expansion of construction in Syria. This was a basic factor for the establishment of Plywood factories.

In 1951 a small factory with local made equipment was established in Damascus. In 1952 a similar factory was also established in Damascus. These 2 factories continued to provide the local market with part of its need until 1958 when a modern factory was built in Lattakiah.

The capital invested in this industry in 1959 was 3,450,000 L.S. and 300 workers were employed.

These factories import their raw materials from French Equatorial Africa, Nigeria, Cameroon, Ghana, etc

These factories produce plywood of different sizes and thicknesses and their productive capacity is about 10,000 cubic meters annually. Syria consumes about 5,000 cubic meters annually, and therefore there is a possibility to export the surplus.

ANIMAL WEALTH

in the

NORTHERN REGION

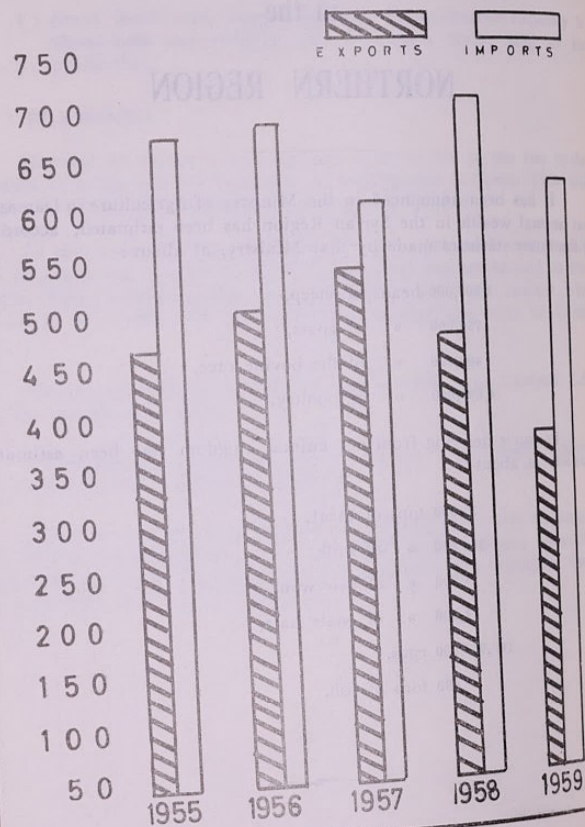

It has been announced in the Ministry of Agriculture in Damascus that animal wealth in the Syrian Region has been estimated, according to the latest statistics made by that Ministry, at about :

3,500,000	heads of sheep,
750,000	» of goats,
400,000	» of the bovine race,
4,000,000	» of poultry.

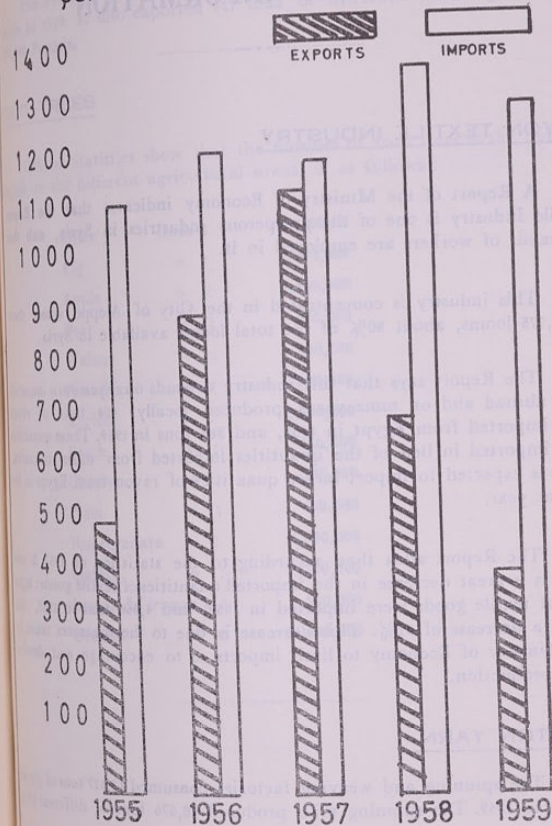

Products deriving from our animal kingdom has been estimated annually at about :

35,000	tons of meat,
350,000	» of milk,
5,000	» of raw wool,
1,300	» of goats hair,
160,000,000	eggs,
400	tons of fish.

ECONOMIC INFORMATION

RAYON TEXTILE INDUSTRY

A Report of the Ministry of Economy indicates that the Rayon Textile Industry is one of the prosperous industries in Syria, and that thousands of workers are employed in it.

This industry is concentrated in the City of Aleppo where there are 3,275 looms, about 90% of the total looms available in Syria.

The Report says that this industry depends on rayon yarn imported from abroad and on some yarns produced locally. 404 tons of rayon were imported from Egypt in 1958, and 885 tons in 1959. These quantities were imported in lieu of the quantities imported from other countries. Syria is expected to import larger quantities of rayon from Egypt in the current year.

The Report adds that according to the statistics of 1957 & 1958 there is a great decrease in the imported quantities of textile goods: 10,004 tons of textile goods were imported in 1957, and 4,866 tons in 1959, this shows a decrease of 52%. This decrease is due to the measures taken by the Ministry of Economy to limit imports so to encourage and develop local production.

COTTON YARN

The spinning and weaving factories consumed 12,127 tons of ginned cotton in 1959. The spinning mills produced 10,676 tons of different kinds

of yarns in 1959. The Syrian Region imported from the Egyptian Region in 1959 cheap kinds of yarns for 6 million Syrian Pounds, and it also imported cotton textile goods for 15 million Syrian Pounds.

The Syrian Region exported 981 tons of yarns for about 3,750,000 Pounds in 1959. It also exported 117 tons of different textile goods for 4,900,000 Pounds.

FRUIT TREES

Official Statistics show that the number of fruit trees in the Syrian Region, in the different agricultural areas, is as follows:

Olive	trees :	13,500,00
Fig	» :	3,700,000
Apple	» :	1,400,000
Pear	» :	600,000
Walnut	» :	400,000
Pistachio	» :	600,000
Apricot	» :	2,300,000
Peach	» :	250,000
Cherry	» :	300,000
Plum	» :	400,000
Pomegranate	» :	1,000,000
Quince	» :	190,000
Lemon & Orange	» :	550,000
Grapes	» :	66,000,000

The Syrian Region imported from the Egyptian Region in 1959 a total value of 4 million Syrian pounds, and it also imported from the Egyptian Region 12 million Syrian pounds.

The Syrian Region exported 311 million Syrian pounds in 1959. It also exported 13 million Syrian pounds in 1959.

FRUIT TREES

Official statistics show that the number of fruit trees in the Syrian Region in the different agricultural areas is as follows:

28,100,000	Orchards
7,700,000	"
1,400,000	"
500,000	"
400,000	"
200,000	"
3,500,000	"
300,000	"
200,000	"
400,000	"
1,500,000	"
1,000,000	"
500,000	"
40,000,000	"
